Betamovie SB CHASSIS

November, 1983

Refer to separate adjustment manual, Part number 9-972-284-81.

SPECIFICATIONS

System

Video recording system	Rotary double-azimuth single-head, Helical scanning
Usable cassettes	Cassettes having the mark
Tape speed	18.73 mm/sec.
Maximum recording time	3 hours 35 min. (with L-830 video cassette)
Audio frequency response	50–8,000 Hz (using an external microphone)
Pickup tube	1/2-inch SMF Trinicon tube
Lens	Combined 6x power zoom lens f9 mm (F1.2)–54 mm (F1.4) with macro Filter diameter: 52 mm
Colour temperature selector	Built-in 2-step filter (3200°K/5500°K)
Minimum illumination	28 lux
Illumination range	28 lux to 100,000 lux (2.6 to 9294 footcandles), automatic sensitivity and iris

Inputs and outputs

DC IN 9.6 V jack	9.6 V dc
EARPHONE jack	Minijack, –26 dBs, 8-ohm impedance
REMOTE jack	Minijack
MIC jack	Minijack, –65 dBs, Low impedance

General

Power requirements	9.6 V dc
Power consumption	9.0 W
Operating temperature	0°C to 40°C (32°F to 104°F)
Dimensions	Approx. 125 × 220 × 357 mm (w/h/d) (5 × 8 3/4 × 14 1/8 inches) when packed
Weight	2.5 kg (5 lb 8 oz) Betamovie only
Viewfinder	TTL optical system, Eyesight correction adjustable (+2 – –4 DP)
Microphone	Built-in electret condenser mic
Accessories supplied	Eye cup cover...1 Shoulder strap...1 Earphone...1 Decal...1 Battery pack NP-11...1 (UK, E Model) AC Power adaptor AC-M100UB...1 (UK Model) AC-M110E...1 (E Model)

SAFETY CHECK-OUT

After correcting the original service problem, perform the following safety checks before releasing the set to the customer:

1. Check the area of your repair for unsoldered or poorly-soldered connections. Check the entire board surface for solder splashes and bridges.
2. Check the interboard wiring to ensure that no wires are "pinched" or contact high-wattage resistors.
3. Look for unauthorized replacement parts, particularly transistors, that were installed during a previous repair. Point them out to the customer and recommend their replacement.
4. Look for parts which, though functioning, show obvious signs of deterioration. Point them out to the customer and recommend their replacement.
5. Check the B+ voltage to see it is at the values specified.

SAFETY-RELATED COMPONENT WARNING !!

COMPONENTS IDENTIFIED BY SHADING AND MARK ⚠ ON THE SCHEMATIC DIAGRAMS, EXPLODED VIEWS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY. CIRCUIT ADJUSTMENTS THAT ARE CRITICAL TO SAFE OPERATION ARE IDENTIFIED IN THIS MANUAL. FOLLOW THESE PROCEDURES WHENEVER CRITICAL COMPONENTS ARE REPLACED OR IMPROPER OPERATION IS SUSPECTED.

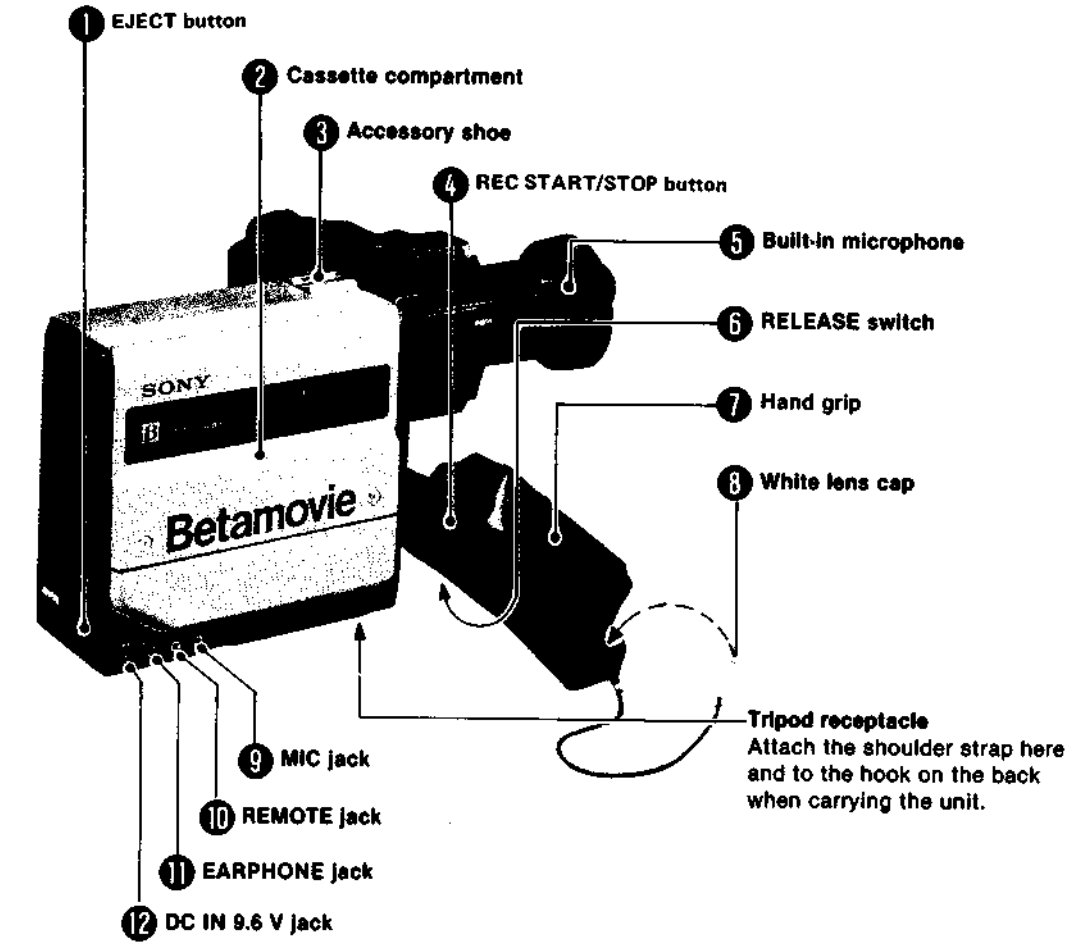
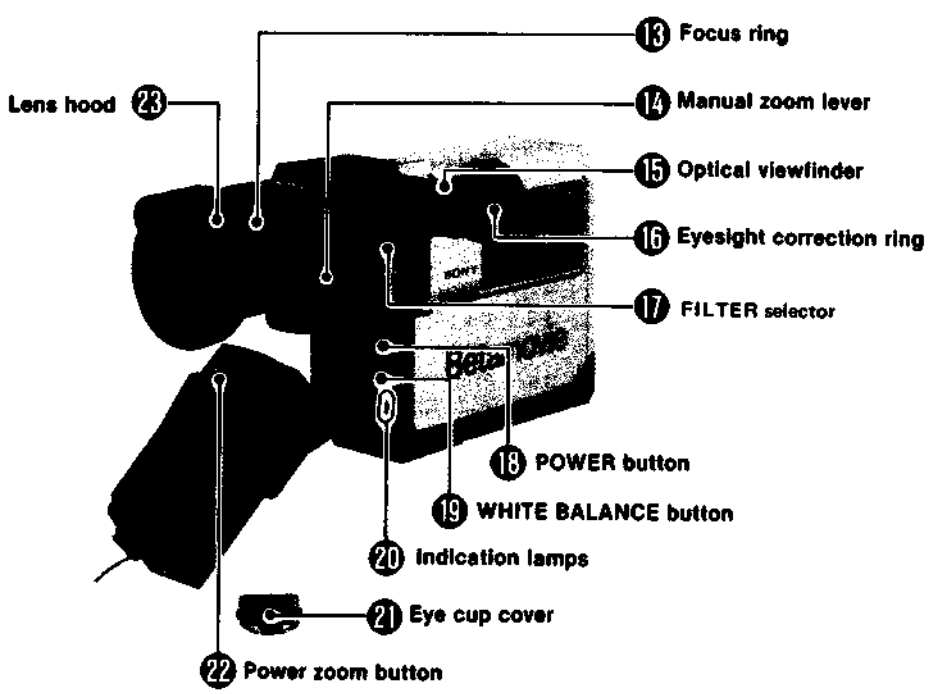
SECTION 1
OUTLINE

1-1. LOCATION AND FUNCTION OF PARTS AND CONTROLS





❶ **EJECT button**
Slide down to open the cassette compartment. (p. 9)
The button does not operate when the power is not supplied or the battery power is exhausted.

❷ **Cassette compartment**
Insert the cassette here. (p. 6)
If a cassette is not loaded, no function except the EJECT button will work.

❸ **Accessory shoe**
For attachment of an external microphone (with a SAD-100 external microphone shoe).

❹ **REC START/STOP button**
Press to start recording, press again to stop. (p. 8)

❺ **Built-in microphone**
Sound is recorded simultaneously with video taping.

❻ **RELEASE switch**
Slide to unlock the hand grip. Hand grip angle can be set in one of three positions. (p. 7)

❼ **Hand grip**
Comfortable grip that also holds the battery pack. (p. 6)

❽ **White lens cap**
Snap onto the hand grip belt when shooting. Place on the lens hood when the unit is not in use, or to adjust the white balance.

❾ **MIC jack**
For connection of an external microphone. The built-in microphone is automatically disconnected.

❿ **REMOTE jack**
For connection of an optional Betamovie Commander to control the unit from a distance.

⓫ **EARPHONE jack**
For connection of the supplied earphone to monitor the sound being recorded. (p. 8)

⓬ **DC IN 9.6 V jack**
For connection of an ac power adaptor or car battery cord. The internal battery power is automatically disconnected.

⓭ **Focus ring**
Turn the ring to focus while looking through the viewfinder. (p. 12, 15)

⓮ **Manual zoom lever**
Use the zoom lever to turn the zoom ring manually between W(wide-angle) and T(telephoto) positions.
For close-ups, turn the knob of the lever in the direction of arrow, then turn the lever counterclockwise until the ring is in the MACRO position.

⓯ **Optical viewfinder**
Place your right eye here so that the lens' full field of view can be seen.
It is possible to focus the lens with the power off. The letter lamps inside the viewfinder indicate all the information necessary for operation.
W: Lights steady when the white balance needs adjustment. (p. 10, 11)
Blinks during adjustment.
T: same as the TAPE/BATT indication lamp. (item ⓴)
C: same as the CAUTION indication lamp. (item ⓴).
L: Lights when the light level is too low. (p. 10)

⓰ **Eyesight correction ring**
Adjust to your eyesight to assure good focus. (p. 12)

Be sure to adjust when shooting for the first time.

⓱ **FILTER selector**
Set to the proper position in accordance with prevailing light conditions. (p. 10)
☼: Sunlight (outdoors or indoors)
☃: Incandescent lamps, fluorescent lamps or photo-flood lamps (indoors)

⓲ **POWER button**
Press to adjust the white balance or to set the standby mode for immediate recording starts. (p. 9) The STANDBY lamp will light.
Press again and the lamp goes off.

⓳ **WHITE BALANCE button**
Press to adjust the white balance with the white lens cap on, after setting the FILTER selector. (p. 10, 11)

⓴ **Indication lamps**
TAPE/BATT : Lights steady when the tape is running.
Blinks when the battery is exhausted. Replace the battery pack.
DEW : Lights when moisture has condensed inside the unit. Eject the cassette and let the Betamovie sit until the moisture evaporates. The unit can be used again if the light does not come on when the cassette is reinserted.
CAUTION : Blinks when the video head becomes clogged or dirty. Clean the video head with a Sony L-25CL video head cleaning cassette.
Lights steady when the unit is out of order. Contact the nearest Sony dealer or local Sony service facility.

㉑ **Eye cup cover**
Attach to the viewfinder eye cup when remotely controlling the unit.
Attach to the shoulder strap when not in use.

㉒ **Power zoom button**
Press for smooth power zooming between the W(wide-angle) and T(telephoto) positions.

㉓ **Lens hood**
Usually attached to the Betamovie. Remove when shooting close-ups or using an optional filter. (p. 13)

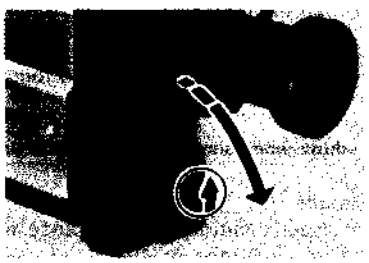
1-2. RECORDING

Operation is easy and practice shooting will help you to become familiar with the procedures.

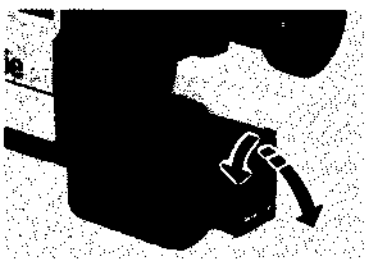
Preparations

1 Install a charged battery pack, NP-11.

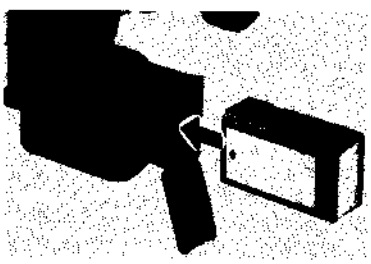
❶ Slide the RELEASE switch up to bring down the hand grip.



❷ Turn the BATTERY knob to OPEN, and open the lid.



❸ Insert a battery, close the lid and turn the knob to CLOSE.



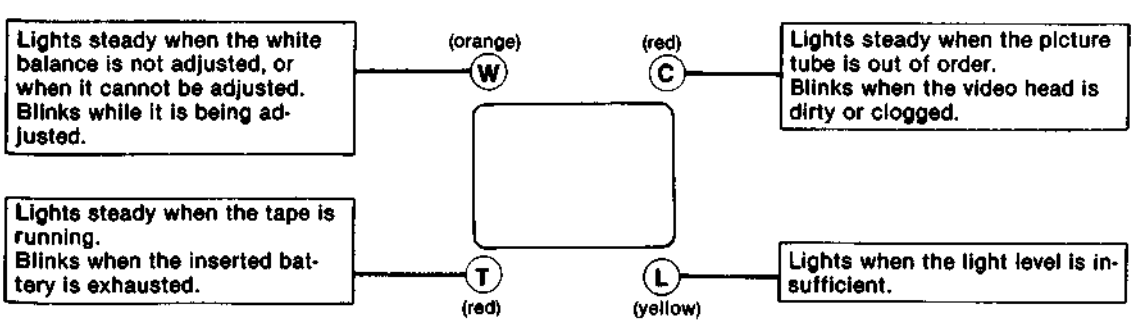
2 Install a cassette (with the safety tab).

❶ Slide the EJECT button down to pop up the compartment lid.

❷ Insert a cassette with the round window to the right and push down to settle.

❸ Press the left side of the compartment lid to close.

The letter lamps inside the viewfinder
The lamps blink or light steady to indicate all the information necessary for operation.



All the lamps light up at first when the POWER or REC START/STOP button is pressed.

Operation

Betamovie is only for recording.
For tape duplication, two other VCRs are required.

1 Set to the standby mode.

Press the POWER button.
The STANDBY lamp lights up.

2 Adjust the white balance.

With the white lens cap on

❷ Press the WHITE BALANCE button.

❶ Set the FILTER selector according to the prevailing light condition.

The "W" goes off when adjusted.

In the viewfinder

Sunlight (outdoors or indoors)

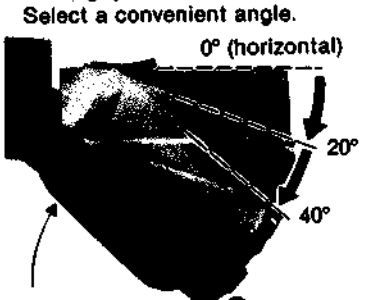
Artificial lights (indoors)

When you press the WHITE BALANCE button immediately after pressing the POWER button, the white balance may sometimes not adjust. In that case, press the WHITE BALANCE button again.

Get ready for shooting

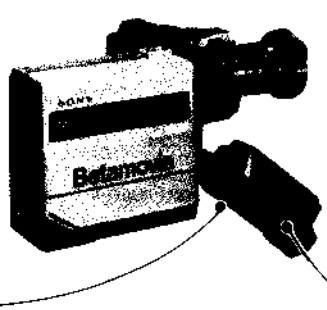
1 Lock the hand grip into a position.

Hand grip
Select a convenient angle.



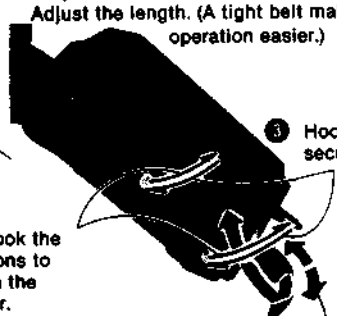
❶ Slide the RELEASE switch to unlock and bend.

❷ Release to lock at the desired angle.



2 Place your right hand under the grip belt and grasp the grip.

Grip belt
Adjust the length. (A tight belt makes operation easier.)



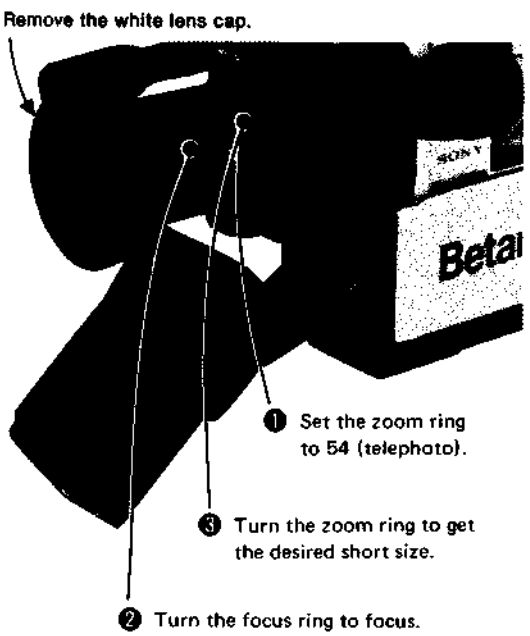
❸ Hook the buttons to secure the cover.

❶ Unhook the buttons to open the cover.

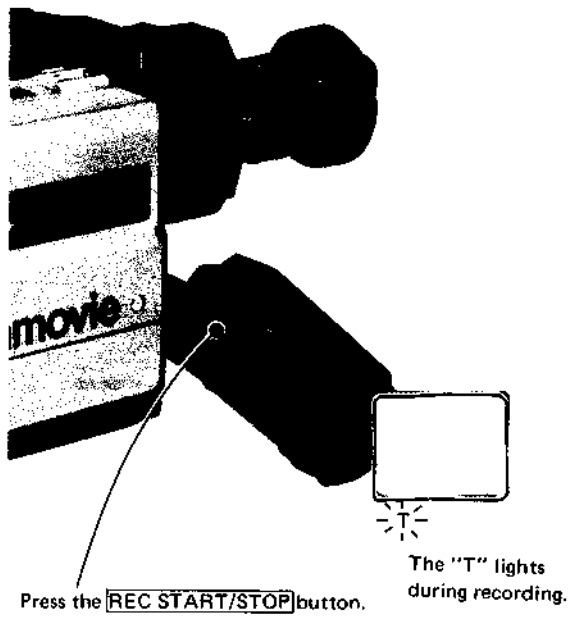
❷ Adjust the strap length to fit your hand.

3 Focus

Adjust the eyesight correction ring to your eye, when using for the first time or after another person. (See page 12, 15.)



4 Start recording

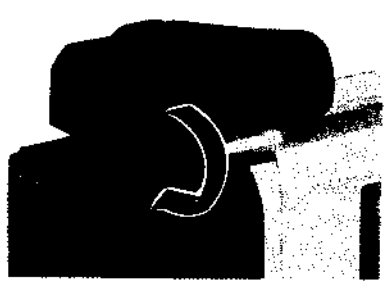


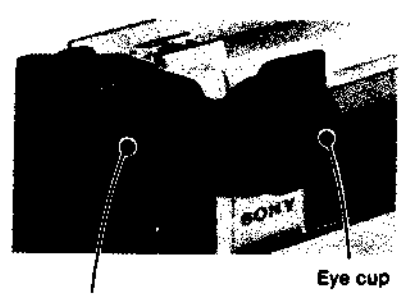
To stop recording momentarily
Press the REC START/STOP button again.
The STANDBY lamp is lit.
The unit is automatically turned off (the STANDBY lamp goes off) when it is in the standby mode over 3 minutes.

Monitoring the sound being recorded.
Plug the supplied eaphone into the EARPHONE jack and listen during recording.

3 Put the Betamovie on your shoulder, and put your right eye on the viewfinder eye cup.

Viewfinder
Fold down into operating position.





Resting the Betamovie on your shoulder helps to keep it steady for shooting.

To start recording again

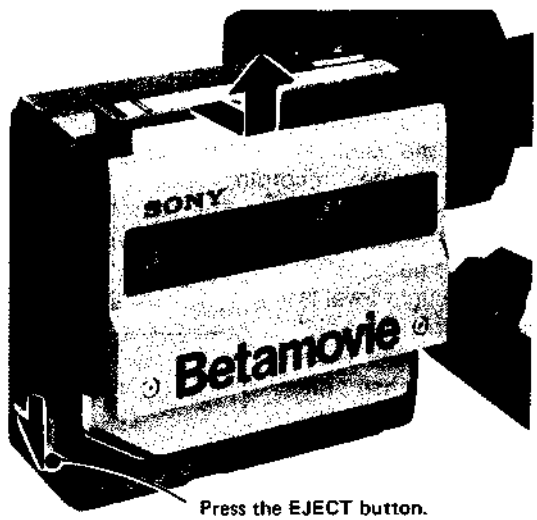
Press the REC START/STOP button again.

While the STANDBY lamp is lit.....
Recording starts immediately.
After the STANDBY lamp goes off.....
Recording starts after about 3 seconds.*
*It takes about 3 seconds for the picture tube warm-up before recording.

When you wish to start recording immediately, press the POWER button to set the Betamovie in the standby mode (the STANDBY lamp is lit.)
The battery power is also consumed in the standby mode as much as in the recording mode.

Smooth recordings can be made even if the recording is stopped and started again, unless the cassette is taken out.

5 Remove the recorded cassette.



Press the EJECT button.

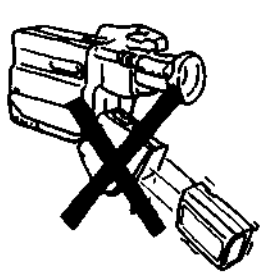
If the battery power is exhausted and the compartment lid cannot be opened, replace with a charged battery or connect with an ac power adaptor.

Run the tape for about 25 seconds **at the beginning of a cassette** before starting recording.
Otherwise you may miss the starting point during playback when the tape is played back on video cassette recorders.

For "once-only" events such as weddings etc., it is strongly recommended to have a trial run to check that everything is working perfectly.

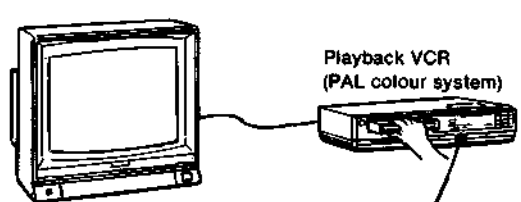
After recording

Take out the battery pack.
Hold the unit with the hand grip lid pointing up to open the battery compartment. Never point the lid downward as the battery pops out.



Charge the battery for the next use.

Playback of the tape
A video cassette recorder and a TV are required.



If streaks or snow appear on the TV screen, adjust the TRACKING control of the VCR for the best possible picture.

For details, refer to the Instruction manual of the VCR.

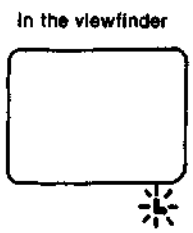
1-3. THREE POINTS TO CONSIDER WHEN SHOOTING

POINT 1

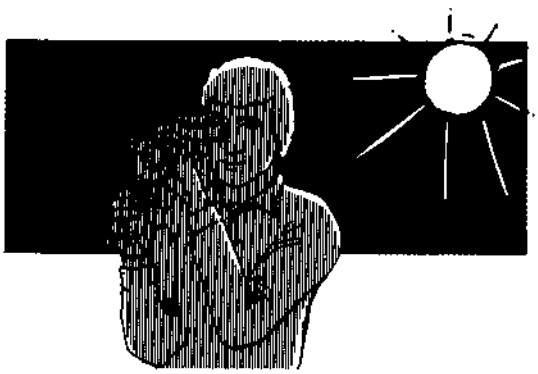
LIGHTING AND LIGHT DIRECTION

Is the subject sufficiently lighted? Actually, because the Betamovie uses Sony's SMF Trinicon® tube, recording can be done without special lighting. But for the best results, there are times when additional lighting is necessary.

When the light level is too low, the letter "L" will light in the viewfinder; increase the light level as necessary. The warning indicator will go out when the light level is satisfactory.



Generally, recording should be done with the sun at your back (front-lighting). This will illuminate the subject naturally and provide the best results from the very beginning of your recording.



It is also possible to record with the sun behind your subject (back-lighting), but this technique is more likely to produce less than satisfactory results until you become proficient. Front-lighting usually provides better results unless you're trying to create special effects

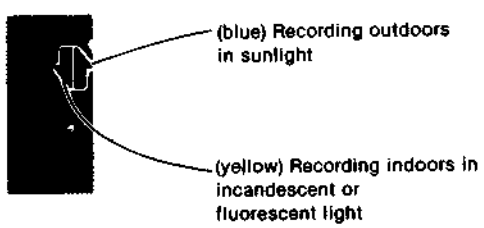
For further details, refer to the section "Brightness levels" in the HINTS FOR BETTER RECORDING section on page 13.

POINT 2

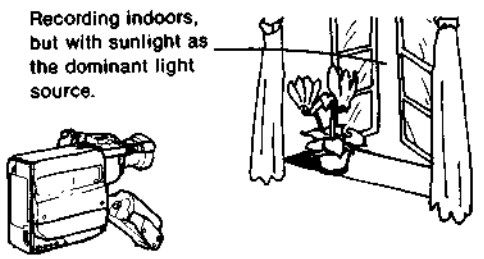
WHITE BALANCE

Because Betamovie uses an optical viewfinder, the image you see in it is usually the same colour as that of the subject. This is not always the case with the image being recorded, however, because of the fact that the colour of the subject can be affected by the colour temperature of the ambient light. The human eye has the ability to adapt to this situation, but a video camera does not. So to compensate for light temperature variations, the white balance control is used.
(See "Colour temperature" in the HINTS FOR BETTER RECORDING on page 13.)

White balance adjustment
First, set the FILTER to the appropriate ambient light position, depending on the most dominant light source.

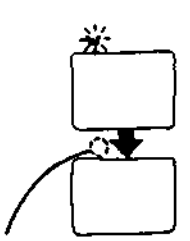


If the camera is indoors but the subject being recorded is in a window or outdoors, set the switch to the ☼ position.



With the [FILTER] set and **the white lens cap in place on the lens hood, aim the lens at a light source (indoors) or a subject from a distance of at least two meters (outdoors).** Then merely press the [WHITE BALANCE] button and the white balance will be perfectly adjusted automatically.

When adjusting white balance outdoors, more accurate adjustment can be made by setting the white balance in accordance with the light conditions the subject will be taped under. For example, if the subject will be taped in sunlight, **put the white lens cap on the lens hood** and point the camera toward the sun. If the subject will be taped in shadows, white balance should also be adjusted in shadows. When white balance adjustment is completed the "W" lamp in the viewfinder will go off.



Cautions on white balance adjustment

Losing white balance adjustment
The white balance adjustment is preserved for about 30 minutes after the power is turned off. If the power is off for more than 30 minutes, or if the [FILTER] selector position is changed, the white blance adjustment will be lost and the "W" lamp will light when the power is turned on. Set the white balance adjustment again as outlined above.

"W" lamp stays on after the WHITE BALANCE button is pushed.
- Adjustment cannot be made because of insufficient light (the "L" lamp will also light.)
- Adjustment cannot be made because of the presence of certain types of light, such as neon signs or tunnel lights.

Even if the "W" lamp does not go off, the white balance is nearly perfectly adjusted by the position of the [FILTER] selector, so recording is still possible.

Changing light sources
Because lighting remains basically the same for a given source, the white balance adjustment does not need to be changed very often. However, if a major light source change is made, such as from outdoor to indoor shooting, the white balance will have to be readjusted.

POINT 3

FOCUS

The first time you use the Betamovie, or if somebody else has been using the Betamovie, be sure to set the focus of the eyesight correction ring to your eyesight before recording.

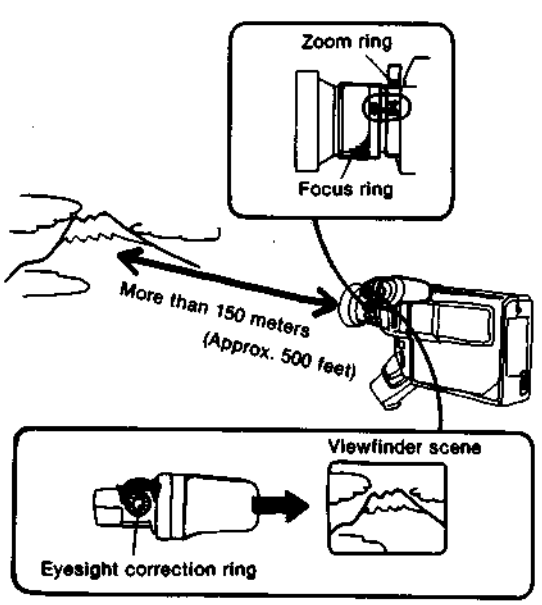
Eyesight adjustment

To properly use the optical viewfinder, it is first necessary to set the eyesight adjustment.

The distance of optimum vision varies from person to person, and the eyesight correction ring is incorporated to compensate for this. If this adjustment is not correct for the user, it is likely that the recorded images will not be in focus.

Using a subject

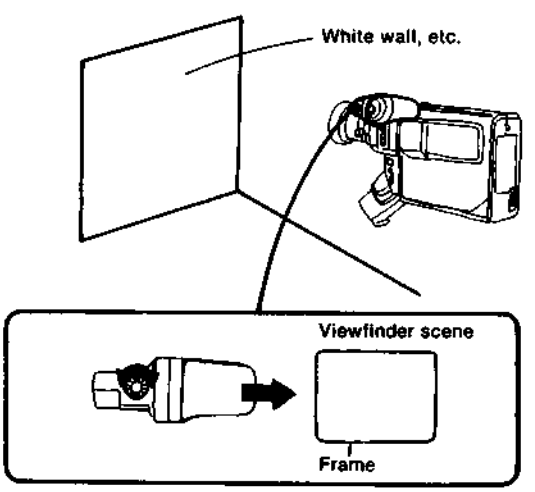
1. Set the zoom ring to **54** (telephoto) and the focus ring to ∞ (infinity).
2. Center a distant subject (at least 150 meters away) in the viewfinder.
3. Turn the eyesight correction ring until the clearest image of the subject is obtained.

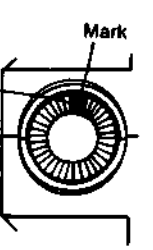


Using the viewfinder frame

When a subject cannot be taken from a distance, such as in a room, etc.

1. Aim the Betamovie at a brightly-lit solid colour object.
2. Turn the eyesight correction ring until the viewfinder frame is in focus.





You will find it useful to remember the setting of the eyesight correction ring so that you can easily reset it should the position be changed.

It does not matter how many times the ring is rotated to the left or right: the only thing that matters is the position of the mark on the ring.

1-4. UNDERSTANDING LIGHT – FOR BETTER RESULTS

Brightness levels

The single greatest influence on picture quality is the brightness level. Using the following chart as a reference, take a few minutes to familiarize yourself with brightness levels to improve your recording.

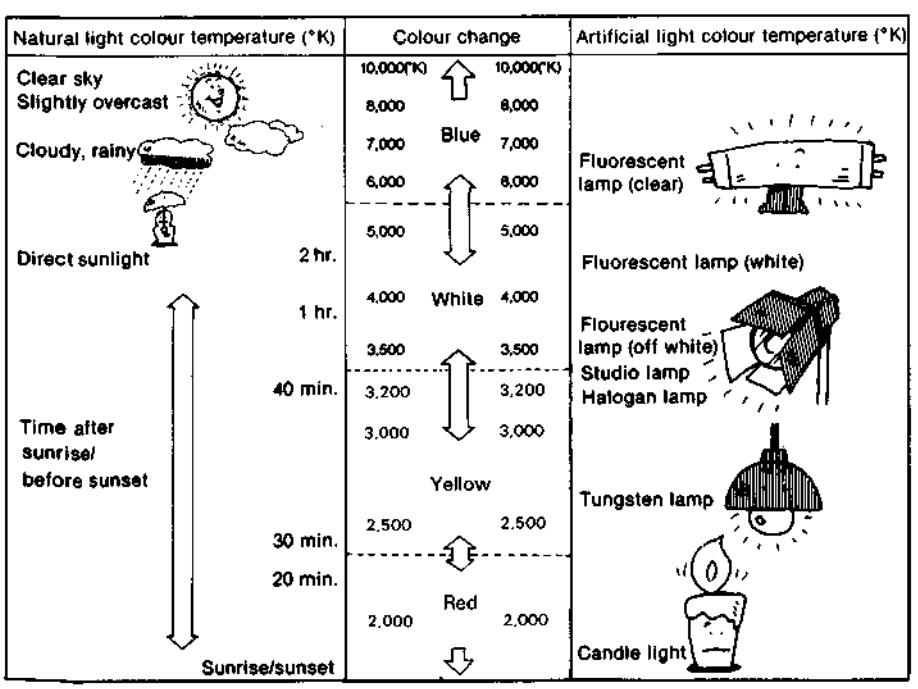
When to use an ND filter

Exceptionally bright scenes such as sunny days at the beach in summer or on snow fields in winter will look "washed out" when recorded. To make these scenes recorded naturally, an ND filter is required. (Refer to the chart)
Three types are available—ND2, ND4, ND8—which reduce the exposure level to 1/2, 1/4, and 1/8, respectively.
Select filters to match the lens diameter of 52 mm.

ND filter required	Unit: lux	
		Snow-covered mountains Snow fields Sandy beach, clear day in summer
Normal recording	100,000	Clear day, mid-day(100,000)
		Clear day, mid-afternoon (35,000) Overcast day, mid-day (32,000)
	10,000	
		Overcast day, one hour after sunrise (2,000) Office lit by fluorescent lamps, near window (1,000)
	1,000	Clear day, one hour before sunset (1,000) Department store counter (500~700)
	500	Station wicket (550)
Video light recommended		Office lit by fluorescent lamps (400~500) Room lit by two 30 W Fluorescent lamps (300) Subway station platform (300)
	100	Arcade at night (150~200)
Video light required		Theater lobby (15~35) Candle light (10~15)
	10	

Colour temperature – how it effects white balance adjustment

If the temperature of an object continues to increase, it will eventually begin giving off light. At this time, there is a fixed relationship between the object's temperature and its "light colour." The temperature of the object radiating the light is expressed in absolute temperature (°K). This is also known as the colour temperature, which in turn stands for "light colour." As colour temperature increases, the light colour changes from red to yellow to white to blue.



1-5. CHARACTERISTICS OF OPTICAL VIEWFINDERS

- **Color pictures are available**...

Subjects which tend to merge with the background,
such as a flower or bird in the woods or a rabbit in a field of snow,
which would be hard to see with a black-and-white viewfinder, can be clearly distinguished.

- **Compact and light-weight**...
- **Always ready**...

Color pictures are always viewable in the viewfinder, even without the Betamovie turned on.
Recording can start after about 3 seconds even if the unit is not in the standby mode.

- **Power saving**...

While an electronic viewfinder needs power to operate, an optical viewfinder consumes no power at all.

These are the reasons why an optical viewfinder is used for the Betamovie.
Keep in mind, however, that the picture being recorded is not exactly the picture shown in the optical viewfinder...
Note that you must set the eyesight adjustment of the viewfinder before you can focus accurately.

1-6. EYESIGHT ADJUSTMENT

First, set
the focus ring at ∞
the zoom ring at **54.**

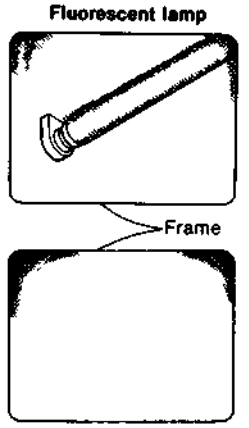
Select one of the following methods.

Indoors

Method 1 Remove the white lens cap and aim the unit at a fluorescent lamp. (It is not necessary that the focus ring be adjusted at this point.)

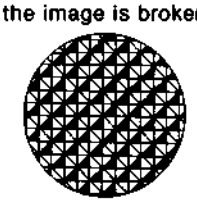
Method 2 Aim at an incandescent lamp **with the white lens cap on.**

Method 3 Remove the white lens cap and aim at a brightly-lit white object.



White lens cap attached or brightly-lit white object

Now adjust the eyesight correction ring so that the viewfinder frame is the clearest. Focusing the viewfinder requires some skill. You will know the viewfinder is focused when the image is broken up into very fine lines.



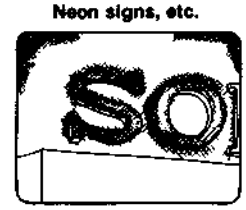
Enlargement of "fine lines" in the viewfinder

Outdoors

Method 1 (Daytime.) Center a subject at least 150 meters (500 feet) away in the viewfinder. Adjust the eyesight correction ring until the clearest image of the subject is obtained.

Method 2 (Night time.) Center a light at least 150 meters (500 feet) away in the viewfinder. Adjust the ring until the light is clear.

Neon signs, etc.



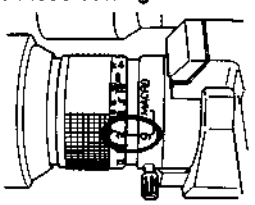
When the subject is the clearest, the "fine lines" are seen.

When the eyesight adjustment has been completed, the viewfinder frame is the clearest, the image in the viewfinder will be clear and broken up into very fine lines.

1-7. FOCUSING

How to be (almost always) in focus -rough focus

Make sure the eyesight adjustment is properly set.
Set the focus ring at **2m** and the zoom ring at **9** and leave them at these settings.



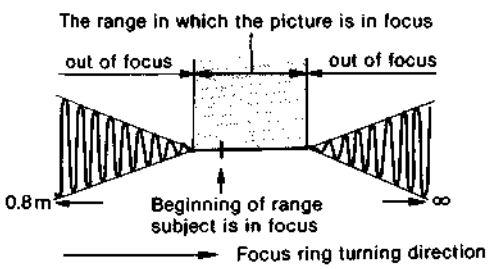
At these settings, the depth of field (the range in which the picture will be in focus) is:
Indoors from 1.2m to 9.5m (4 to 31 feet)
Outdoors on a clear day from 40cm (16 inches) to ∞ (infinity)

Use the viewfinder simply to frame the picture.

How to focus precisely

Make sure the eyesight adjustment is properly set.

1 Set the zoom ring at **54** and the focus ring at **0.8m.**
2 Turn the focus ring toward ∞ until the point at which the subject **begins to come into focus.**

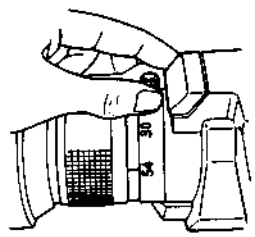


Now you are ready to start recording.

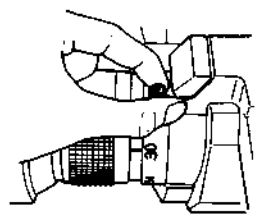
The closer the zoom ring is to **9**, the deeper the depth of field becomes. Shoot pictures as wide as possible (**30** and under) if there is no need to be telephoto. Be sure to focus for each shot with the zoom ring at **54.**

An easy way to manipulate the zoom ring for focusing while looking through the viewfinder.

1 Turn the zoom lever to **54** with your thumb.



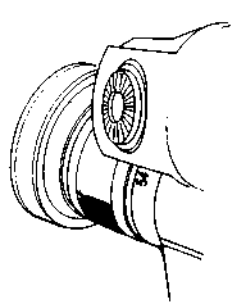
2 Place the thumb of the left hand as shown, and with your forefinger turn the lever until it touches your thumb. The value of the zoom ring will be around **30** at this point.



Practice eyesight adjustment and focusing over and over on the same tape until you are satisfied with the results.
It is better to practice on a subject with letters or lines on it, rather than a landscape. You might find it useful to record your voice as you practice — "Now the subject is just coming into focus" — so that you can see the relation between focus in the viewfinder and focus of the recorded subject.

To monitor the value of the zoom ring while looking through the viewfinder

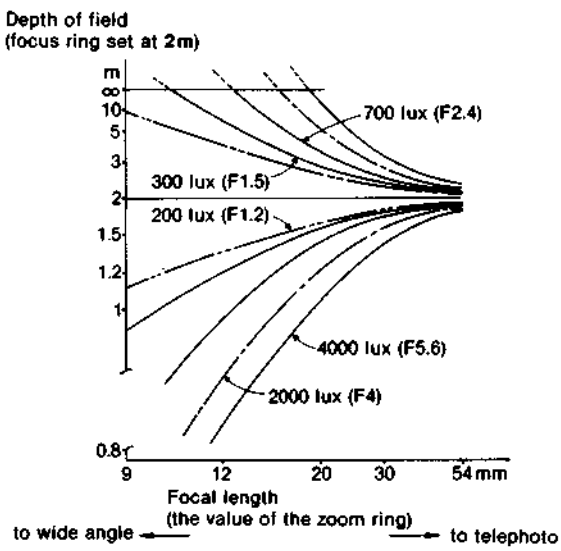
Open your left eye to see the zoom ring while keeping your right eye in the viewfinder.
When you see **54**, the ring is set approximately at **30.**
With practice, you can estimate the value of the zoom ring by the number seen with your left eye.

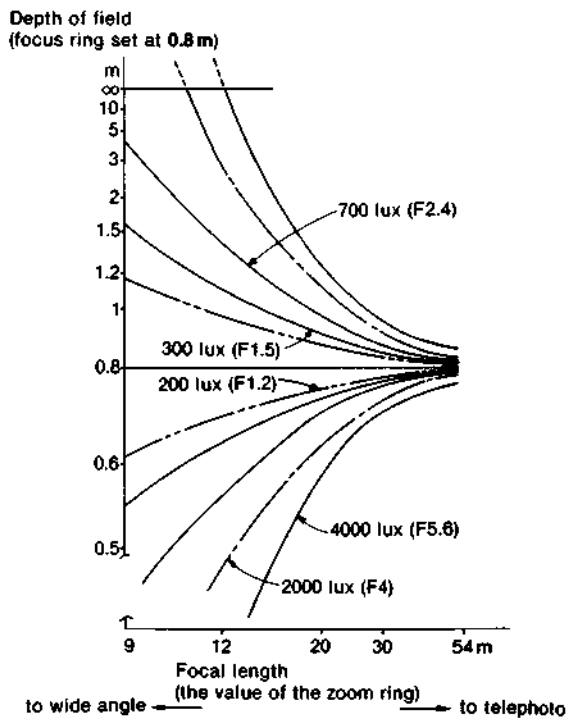


1-8. DEPTH OF FIELD

—Refer to the charts below.

In any lens a subject which extends some distance either side of the focal point can be shot in focus, as long as it falls within the "depth of field."
The depth of field varys depending on the lens' focal length (wide angle or telephoto), the amount of light and the distance from the subject.
The figures on the focus ring indicate the distance between the front of the lens (not including the lens hood) and the subject when the subject is in focus.





For a sharp picture, please observe the following points.

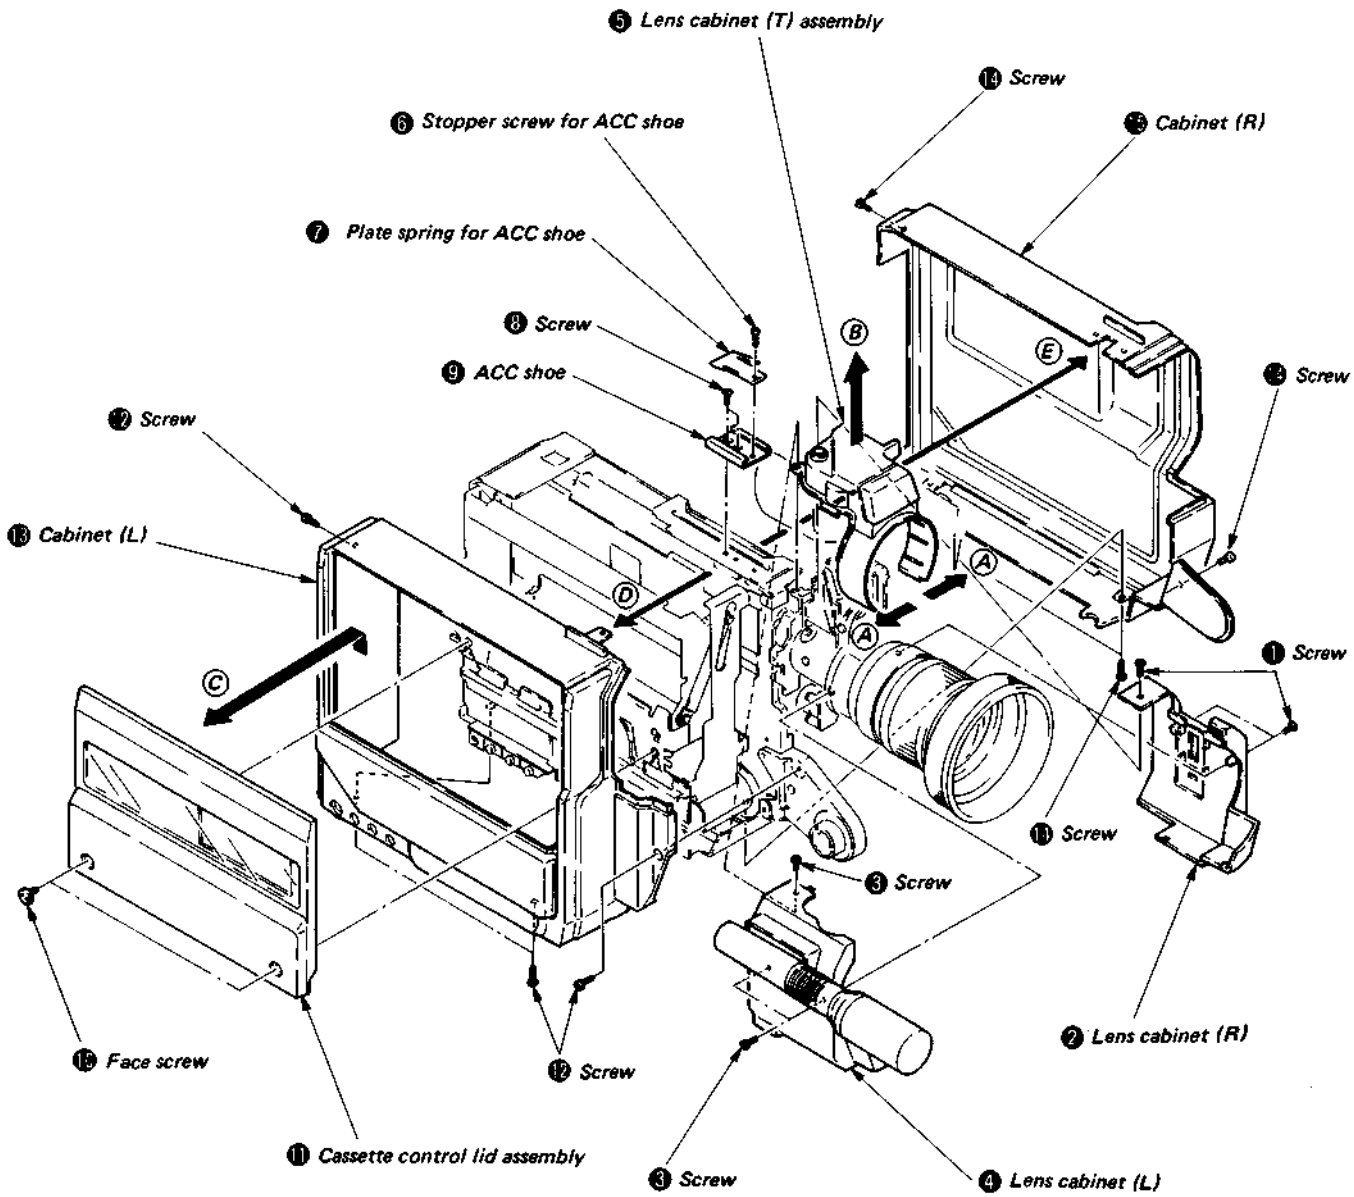
1 Get close to the subject.
2 Use a wide angle shot.
3 Make sure the light is sufficient.

These three points apply to any type of video camera.

SECTION 2
DISASSEMBLY

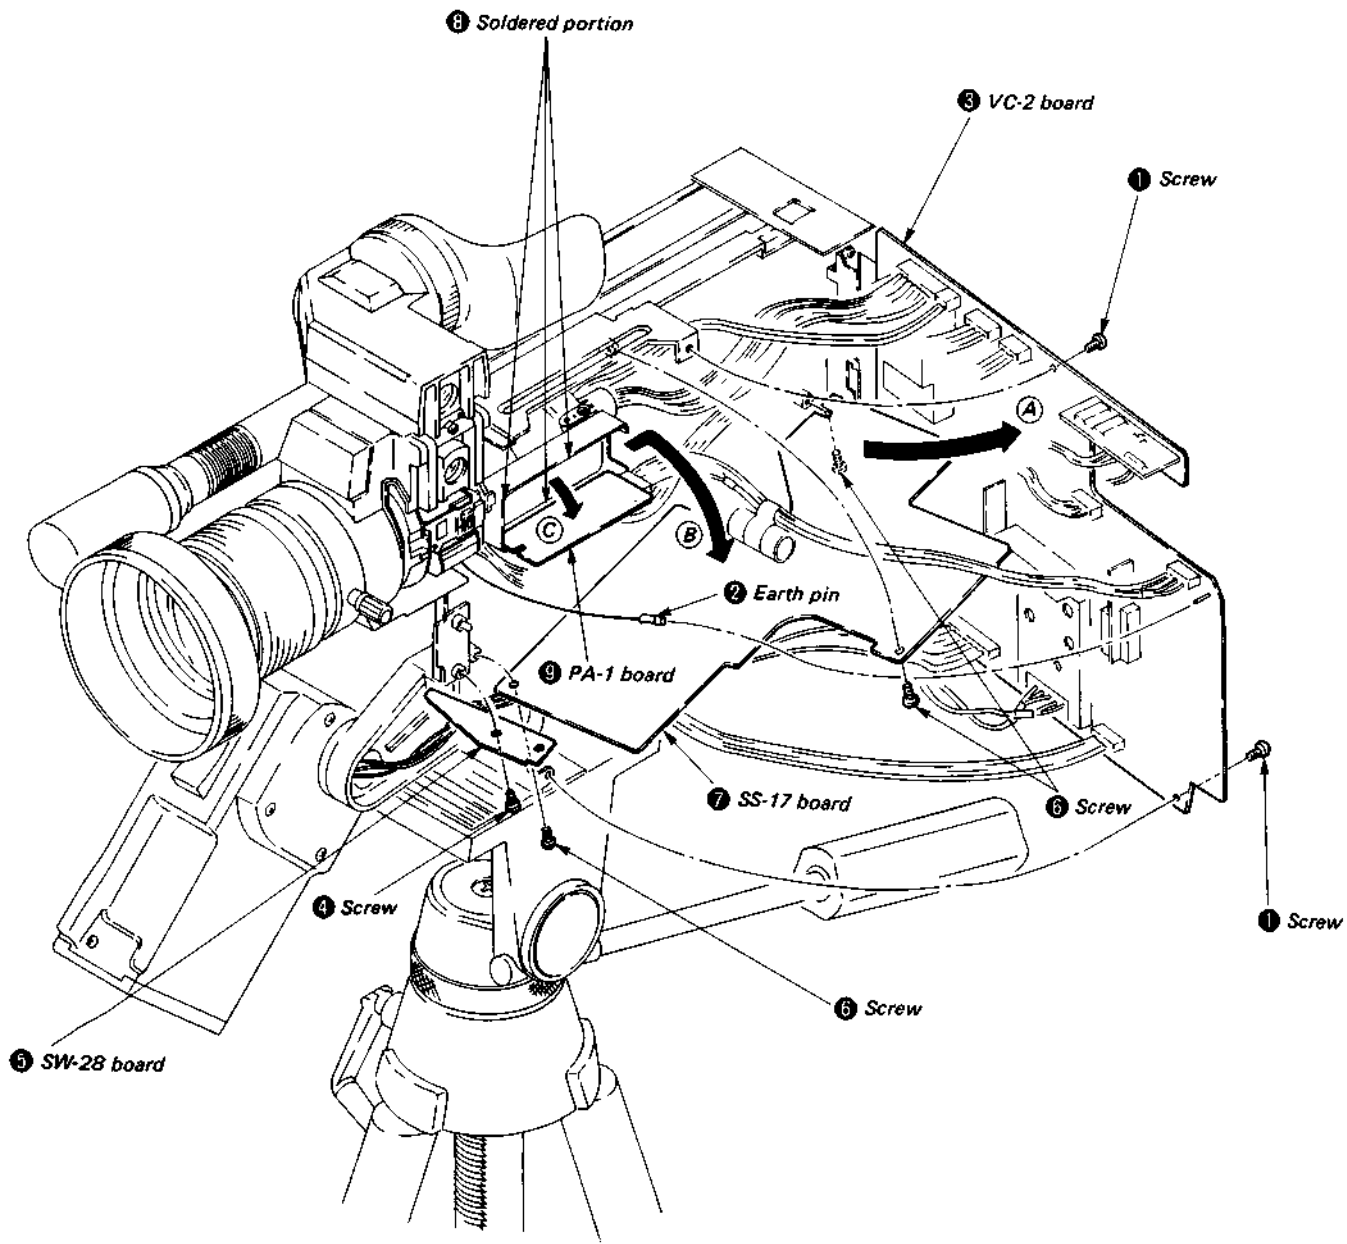
2-1. CABINET REMOVING PROCEDURE

❶ Remove three screws (+P2 x 8).
❷ Remove lens cabinet (R).
❸ Remove three screws (+P2 x 8).
❹ Remove lens cabinet (L).
❺ Remove lens cabinet (T) assembly in the direction of arrow Ⓑ after opening it in the direction of arrow Ⓐ.
❻ Remove Stopper screw for ACC shoe.
❼ Remove plate spring for ACC shoe.
❽ Remove two screws (K2.6 x 6).
❾ Remove ACC shoe.
❿ Remove two face screws.
⓫ Remove cassette control assembly in the direction of arrow Ⓒ.
⓬ Remove four screws (+B2.6 x 6).
⓭ Remove cabinet (L) in the direction of arrow Ⓓ.
⓮ Remove four screws (+B2.6 x 6).
⓯ Remove cabinet (R) in the direction of arrow Ⓔ.



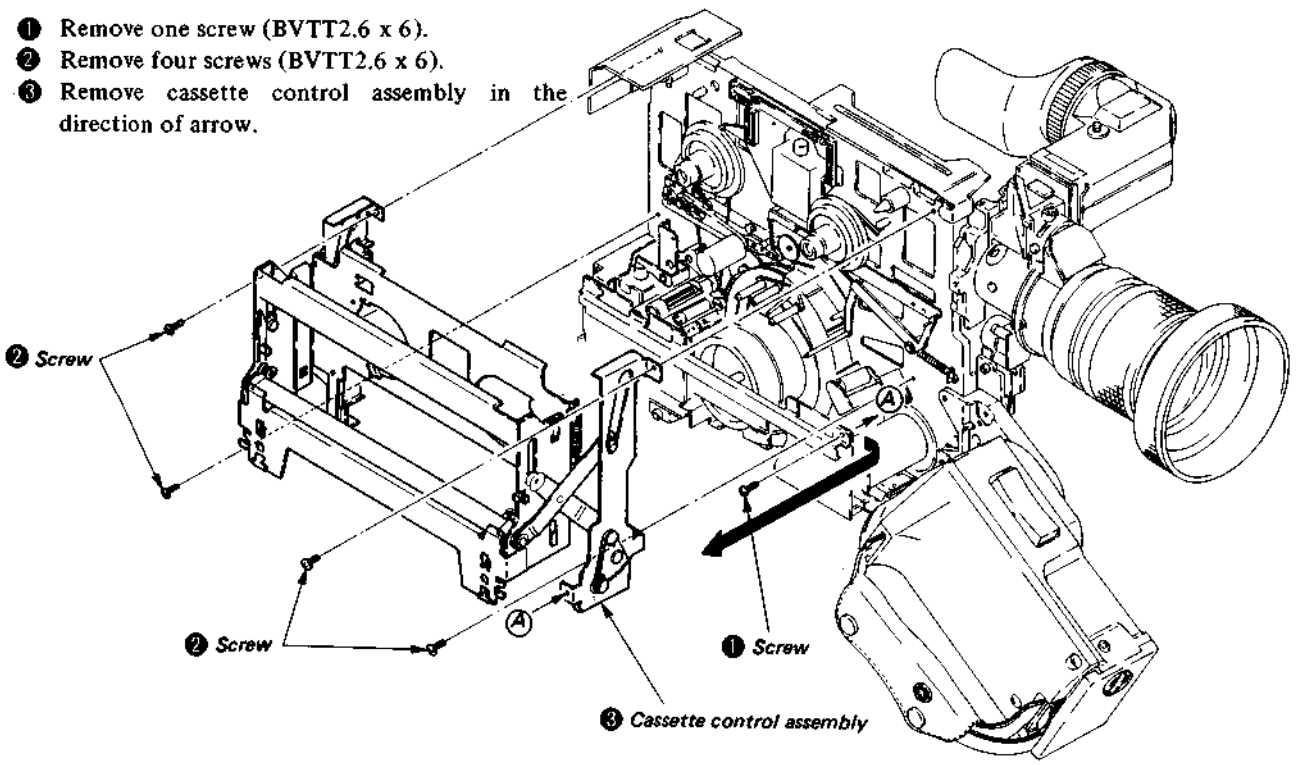
2-2. PROCEDURE FOR OPENING SS-17 AND VC-2 BOARDS

❶ Remove two screws (BVTT2.6 x 6).
❷ Pull out earth pin.
❸ Open VC-2 board in the direction of arrow Ⓐ.
❹ Remove one screw (+PTP2.6 x 10).
❺ Remove SW-28 board.
❻ Remove three screws (BVTT2.6 x 6).
❼ Open SS-17 board in the direction of arrow Ⓑ.
❽ Remove soldered portions of PA sield case and PA-1 board.
❾ Open PA-1 board in the direction of arrow Ⓒ.



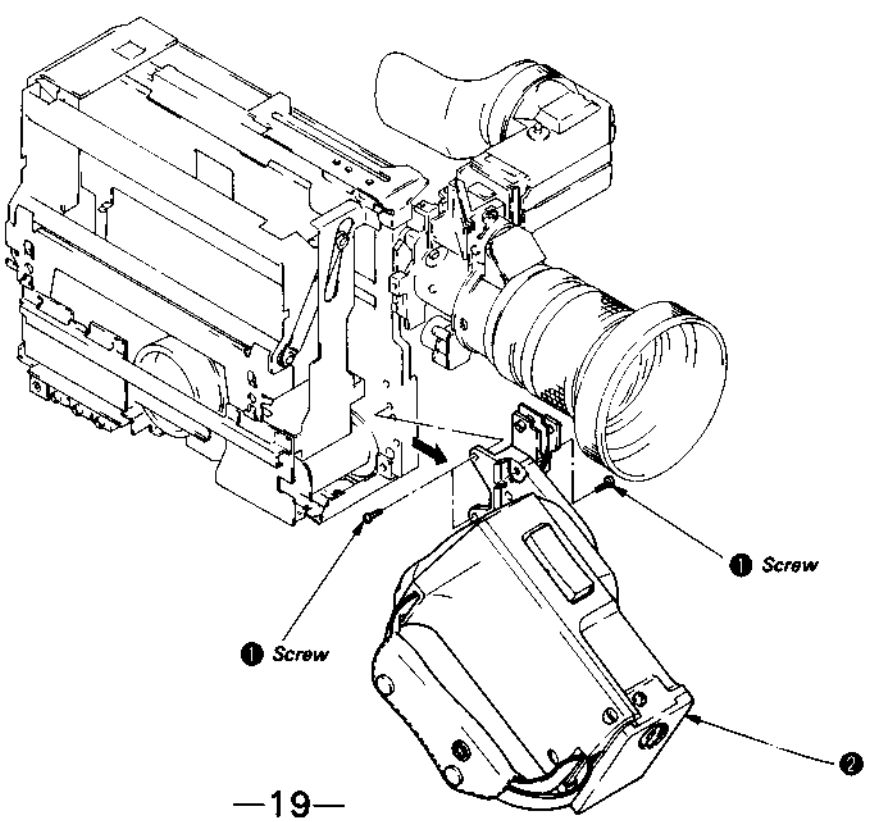
2-3. PROCEDURE FOR REMOVING CASSETTE CONTROL ASSEMBLY

❶ Remove one screw (BVTT2.6 x 6).
❷ Remove four screws (BVTT2.6 x 6).
❸ Remove cassette control assembly in the direction of arrow.



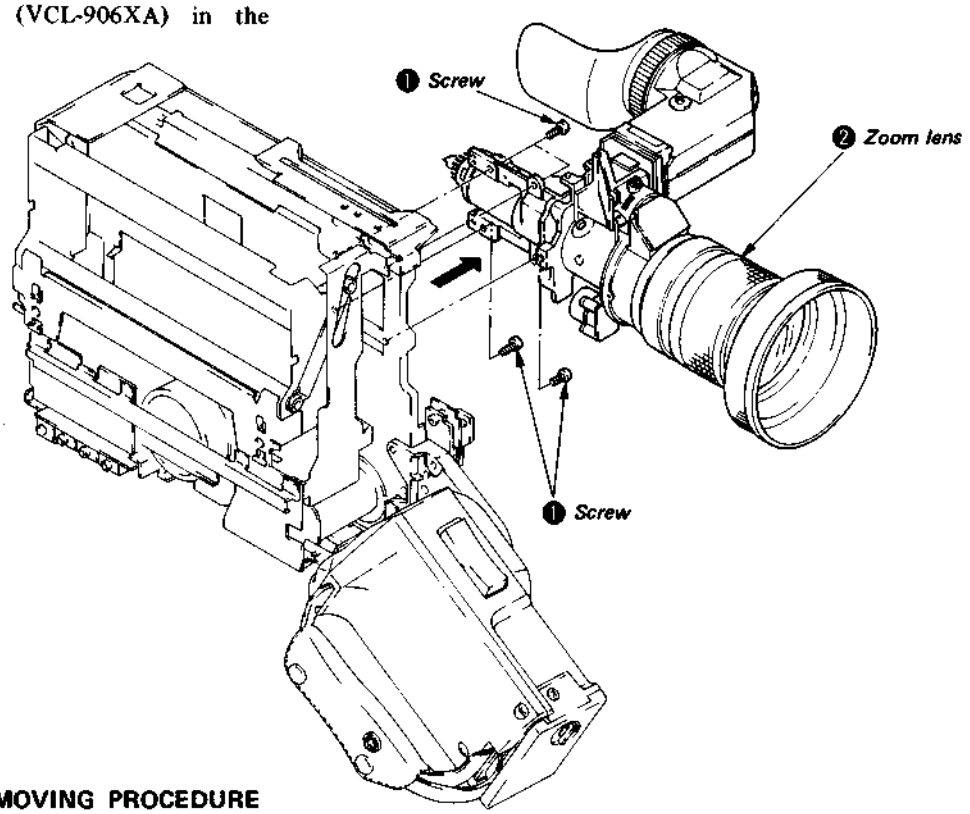
2-4. GRIP REMOVING PROCEDURE

❶ Remove three screws (BVTT2.6 x 8).
❷ Remove grip in the direction of arrow.



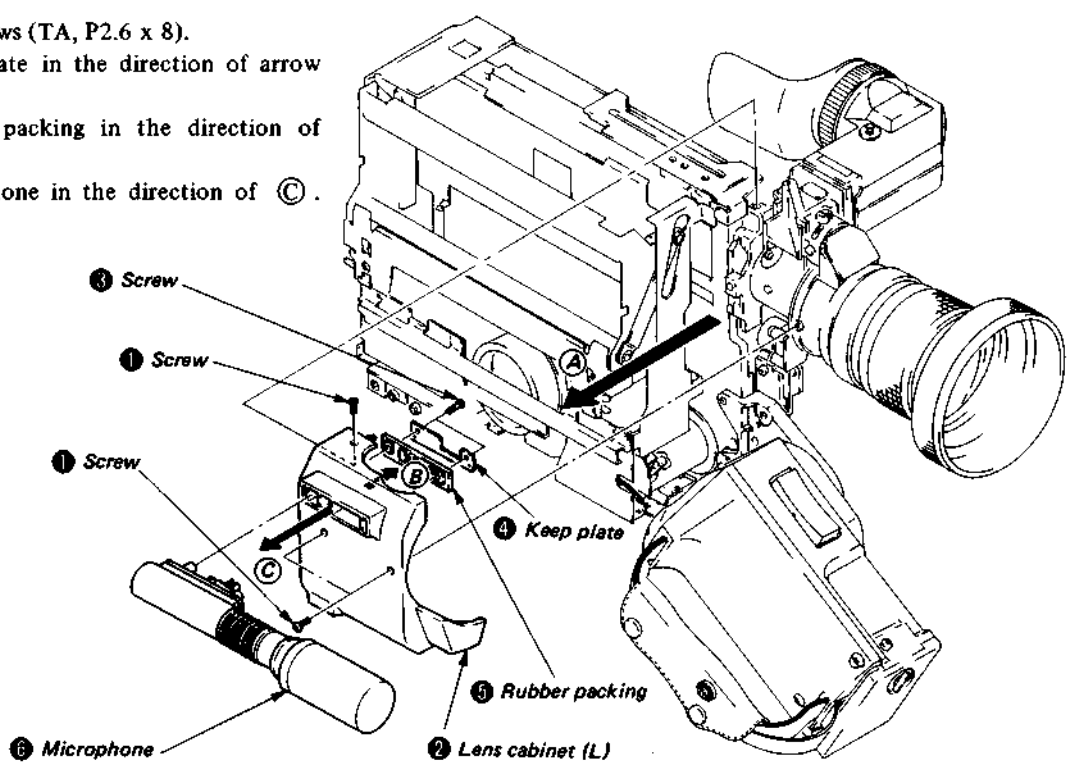
2-5. ZOOM LENS (VCL-906XA) REMOVING PROCEDURE

❶ Remove four screws (BVTT2.6 x 8).
❷ Remove zoom lens (VCL-906XA) in the direction of arrow.



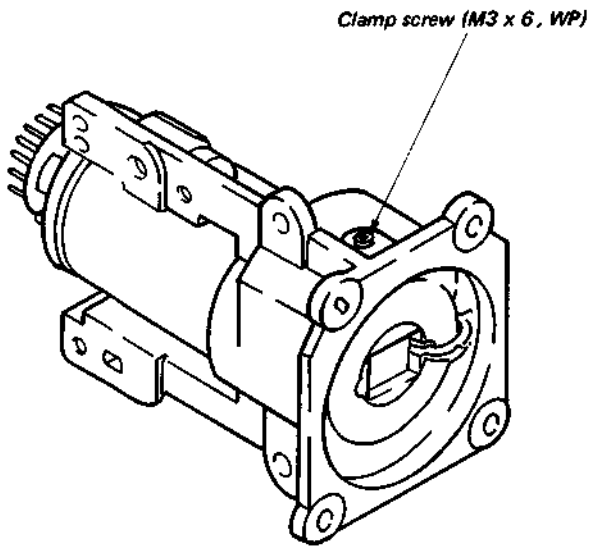
2-6. MICROPHONE REMOVING PROCEDURE

❶ Remove three screws (+P2 x 8).
❷ Remove lens cabinet (L) in the direction of arrow Ⓐ.
❸ Remove two screws (TA, P2.6 x 8).
❹ Remove keep plate in the direction of arrow Ⓑ.
❺ Remove rubber packing in the direction of arrow Ⓑ.
❻ Remove microphone in the direction of Ⓒ.

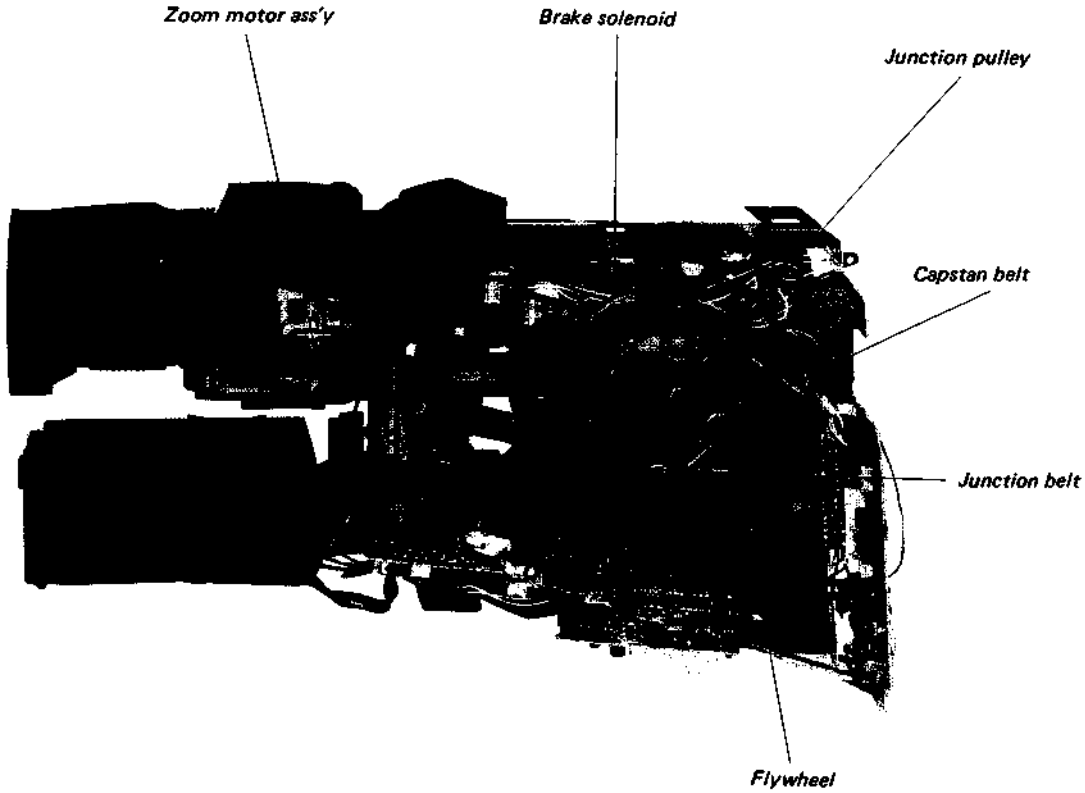


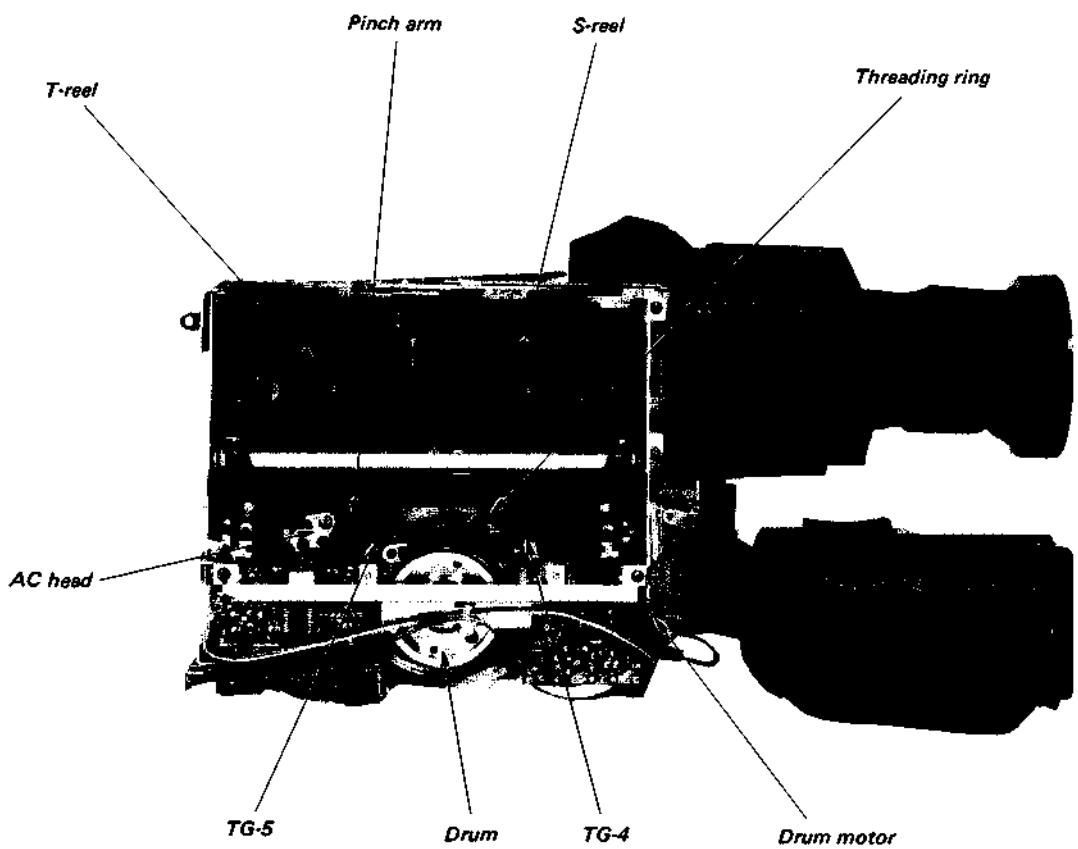
2-7. CAUTION WHEN REPLACING CAMERA TUBE

When tightening the clamp screw of camera tube (for replacement), tighten the clamp screw with a torque of 5.0kg·cm ± 1kg·cm.



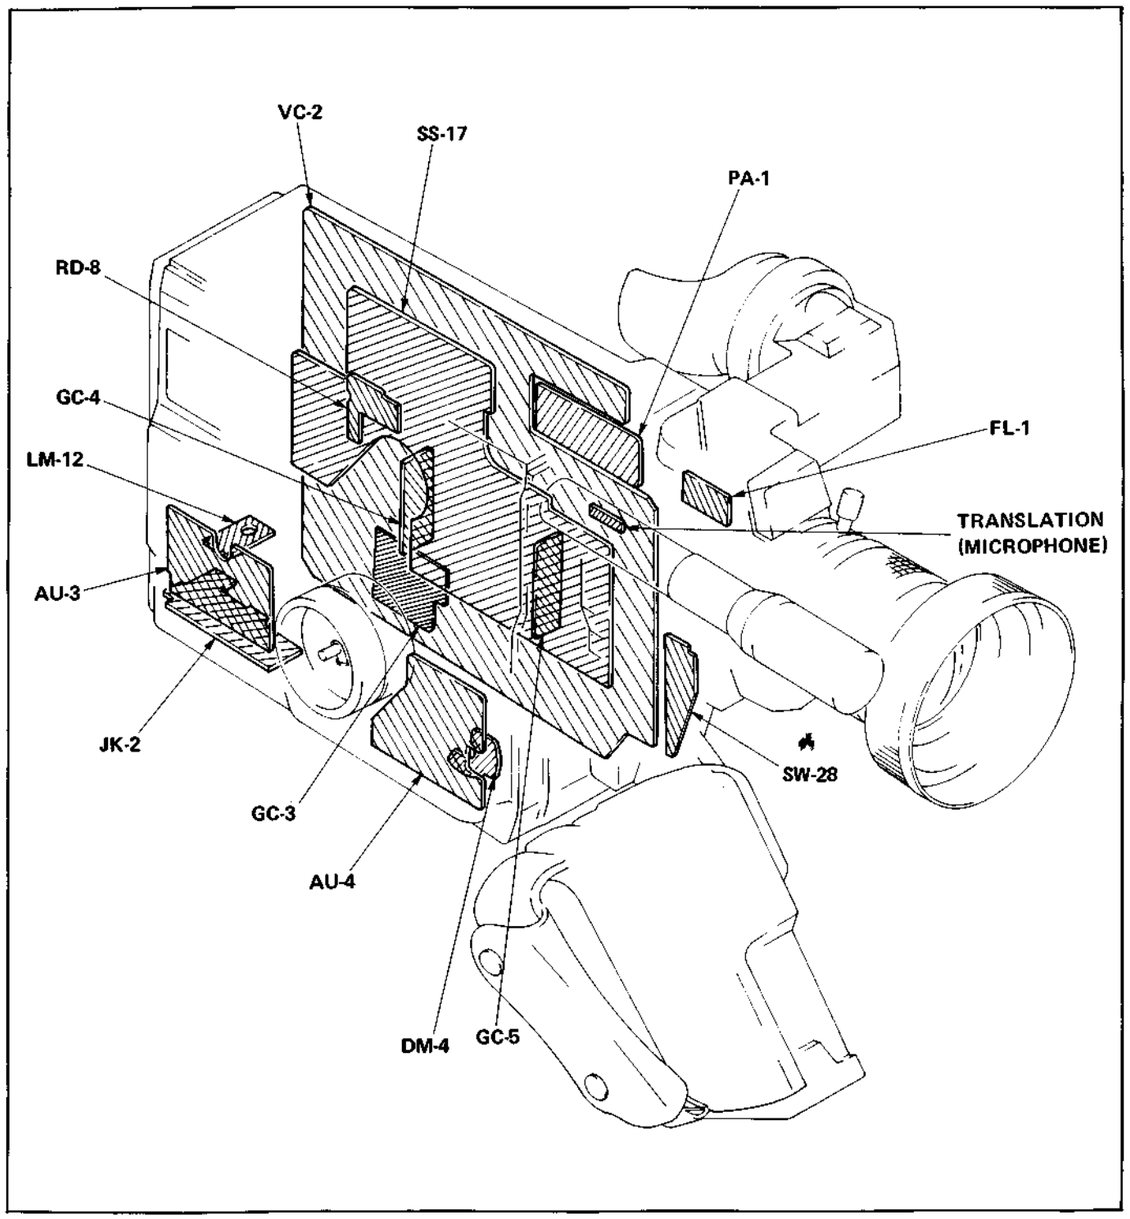
2-8. INSIDE VIEWS





SECTION 3
BLOCK DIAGRAMS

3-1. CIRCUIT BOARDS LOCATION



3-2. OVERALL BLOCK DIAGRAM

3-15. FUNCTION OF IC301 TERMINALS

Terminal No.	Terminal name	I/O	Functions
1	$\overline{\text{PWCTRL}}$	OUT	Turns on/off power supply circuit.
2	$\overline{\text{BIAS}}$	OUT	Turns on/off audio recording bias circuit.
3	$\overline{\text{PINCH ON}}$	OUT	Presses pinch roller against capstan. Pulse width of 200mS.
4	$\overline{\text{PINCH OFF}}$	OUT	Separates pinch roller from capstan. Pulse width of 200mS.
5	$\overline{\text{BRAKE ON}}$	OUT	Applies brake to reel base. Pulse width of 200mS.
6	$\overline{\text{BRAKE OFF}}$	OUT	Releases brake from reel base. Pulse width of 200mS.
7	$\overline{\text{DEW LED}}$	OUT	Turns on DEW LED.
8	$\overline{\text{STAND-BY LED}}$	OUT	Turns on STANDBY LED.
9	$\overline{\text{TALLY LED}}$	OUT	Turns on TALLY LED.
10	$\overline{\text{CLOG LED}}$	OUT	Turns on CAUTION LED.
11			Not used.
12	$\overline{\text{PB}}$	OUT	Operates PB amplifier for CLOG detection and for linked shooting.
13	$\overline{\text{REC}}$	OUT	Operates CTR recording amplifier of picture recording circuit.
14	$\overline{\text{DRUM OUT}}$	OUT	Turns on/off drum motor drive circuit.
15	$\overline{\text{SET UP 2}}$	OUT	Performs beam blacking of camera tube for 1.5 second during shifting from READY to REC, STANDBY and PB.
16	START	IN	Trigger input for starting IC301. Inputs occur when each switch of REC and STANDBY EJECT C-IN is turned on and when $\overline{\text{PB SW}}$ becomes "L".
17			Not used.
18	+5V (VDD)		+5V power supply terminal.
19			Not used
20	$\overline{\text{DEW SENS}}$	IN	Drum dew condensation input. Set is not operated during "L".
21	$\overline{\text{BAT DWN}}$	IN	When power supply voltage decreases, "L" occurs and the operation of set is stopped.
22	$\overline{\text{RECSW/REMOTE}}$	IN	Input of REC switch and remote control switch. When this input occurs, REC mode starts. Also, STANDBY and REC modes are switched every time there is an input.
23	$\overline{\text{STAND-BY SW}}$	IN	Input of STANDBY switch. By this input, STANDBY and READY (stop) modes are switched.
24	DRUM PG	IN	PG signal input by which whether the drum is normally rotated or not is checked.
25	$\overline{\text{CLOG DET}}$	IN	Whether the normal picture recording is being made or not is applied to this terminal. Whether the picture recording is normal or not is checked during linked shooting.
26	TFG	IN	FG of reel base rotation at T side is entered. If FG input is abnormal, set is stopped.
27	$\overline{\text{TAPE END}}$	IN	If the oscillation of TAPE END detection-oscillation circuit stops, then "L" is applied to this terminal and the set is stopped.
28	$\overline{\text{PB SW}}$	IN	If this terminal is set to "L", then the set will have PB mode.
29	$\overline{\text{AUDIO REC}}$	OUT	Operates audio sound recording circuit.
30			Not used.
31	$\overline{\text{SET UP 1}}$	OUT	Pulses of 3 seconds are delivered when shifting from READY to REC, STANDBY and PB, during which the set performs no operation. This output also turns on LEDs of WHITE BALANCE and LOW LIGHT. 3 seconds is mainly used for the rise of heater of picture tube.
32	$\overline{\text{EJECT SW}}$	IN	Cassette is ejected by this input.
33	$\overline{\text{C-IN SW}}$	IN	Input terminal of switch which detects the entry of a cassette. This switch also detects the claw for preventing picture recording of cassette and thus has the function to prevent picture recording.
34	$\overline{\text{L END}}$	IN	Input terminal for detecting the completion of loading.
35	$\overline{\text{CSWO}}$	IN	Input for distinguishing the output of A-head from the output of B-head during CLOG detection.
36	X'tal IN	IN	Terminal for connecting clock oscillation element.
37	X'tal OUT	OUT	Terminal for connecting clock oscillation element.
38	$\overline{\text{RESET}}$	IN	Trigger input of IC031 reset circuit.
39	PBCTL	IN	Input for taking pinch-off timing during linked shooting.
40	CTIO	IN	Input for taking REC start timing during linked shooting.
41			Not used.
42	GND		Earth terminal
43			Not used.
44	$\overline{\text{BE/PD}}$	OUT	Delivers "L" when the battery voltage is lower than 9.15 ± 0.1V.
45	$\overline{\text{CC DOWN SW}}$	IN	Detects a failure of cassette control.
46			Not used.
47	$\overline{\text{LOAD}}$	OUT	Output for performing the loading (pulse drive).
48	$\overline{\text{UN LOAD}}$	OUT	Output for performing unloading (pulse drive).

3-16. FUNCTION OF IC851 TERMINALS

Terminal No.	Terminal name	I/O	Functions
1	TST1	IN	Input for measurement, normally fixed to 'H'.
2	TST2	IN	Input for measurement, normally fixed to 'H'.
3			Not used.
4	TST3	IN	Input for measurement, normally fixed to 'H'.
5	PPM0	OUT	PAL carrier color signal, fsc = (44 ± 1/8) · f_H
6	Vss		0V
7	PM90	OUT	PAL carrier color signal, -90° signal for PPM0.
8	XRST	IN	External reset input, normally fixed to 'H'.
9	PBO	OUT	Burst signal of PAL.
10	PPBO	OUT	Pilot burst signal of PAL.
11	FID	OUT	Frame ID signal of SECAM.
12	VID	OUT	Field ID signal of SECAM.
13	PPBF	OUT	Pilot burst flag signal of PAL.
14	DEVD	OUT	Deflection VD signal.
15	DEHD	OUT	Deflection HD signal.
16	BMCL	OUT	Black mask clamp signal.
17	BBLK	OUT	Beam blanking signal.
18	VDO	OUT	Vertical drive signal.
19	V_{DD}		+5V
20	HDO	OUT	Horizontal drive signal.
21	SYNC	OUT	Composite sync signal.
22	BLKO	OUT	Composite blanking signal of PAL.
23	BFO	OUT	Color burst flag signal of PAL.
24			Not used.
25	PALT	OUT	Line alternation signal of PAL.
26	XPAL	OUT	Inverted signal of PALT.
27	SALT	OUT	Line alternation signal of SECAM.
28	SCBL	OUT	Color blanking signal of SECAM.
29	SHBL	OUT	Horizontal blanking signal of SECAM.
30	CSWO	OUT	Video head switching signal for CLOG detection.
31	Vss		0V
32	CT10	OUT	CTL recording signal.
33	CT20	OUT	Video head switching signal for recording.
34	SRVO	OUT	Servo signal.
35	FLM2	OUT	Frame alternation signal.
36	KVID	IN	Controls whether the field ID portion of SCBL is to be sent out or not.
37	X1I	IN	702 · f_H in
38	X1O	OUT	702 · f_H out
39	X2O	OUT	706 · f_H out
40	X2PD	OUT	Phase detector output signal.
41	X2I	IN	706 · f_H in
42			Not used.
43	V_{DD}		+5V
44			Not used.
45			Not used.

WAVEFORMS

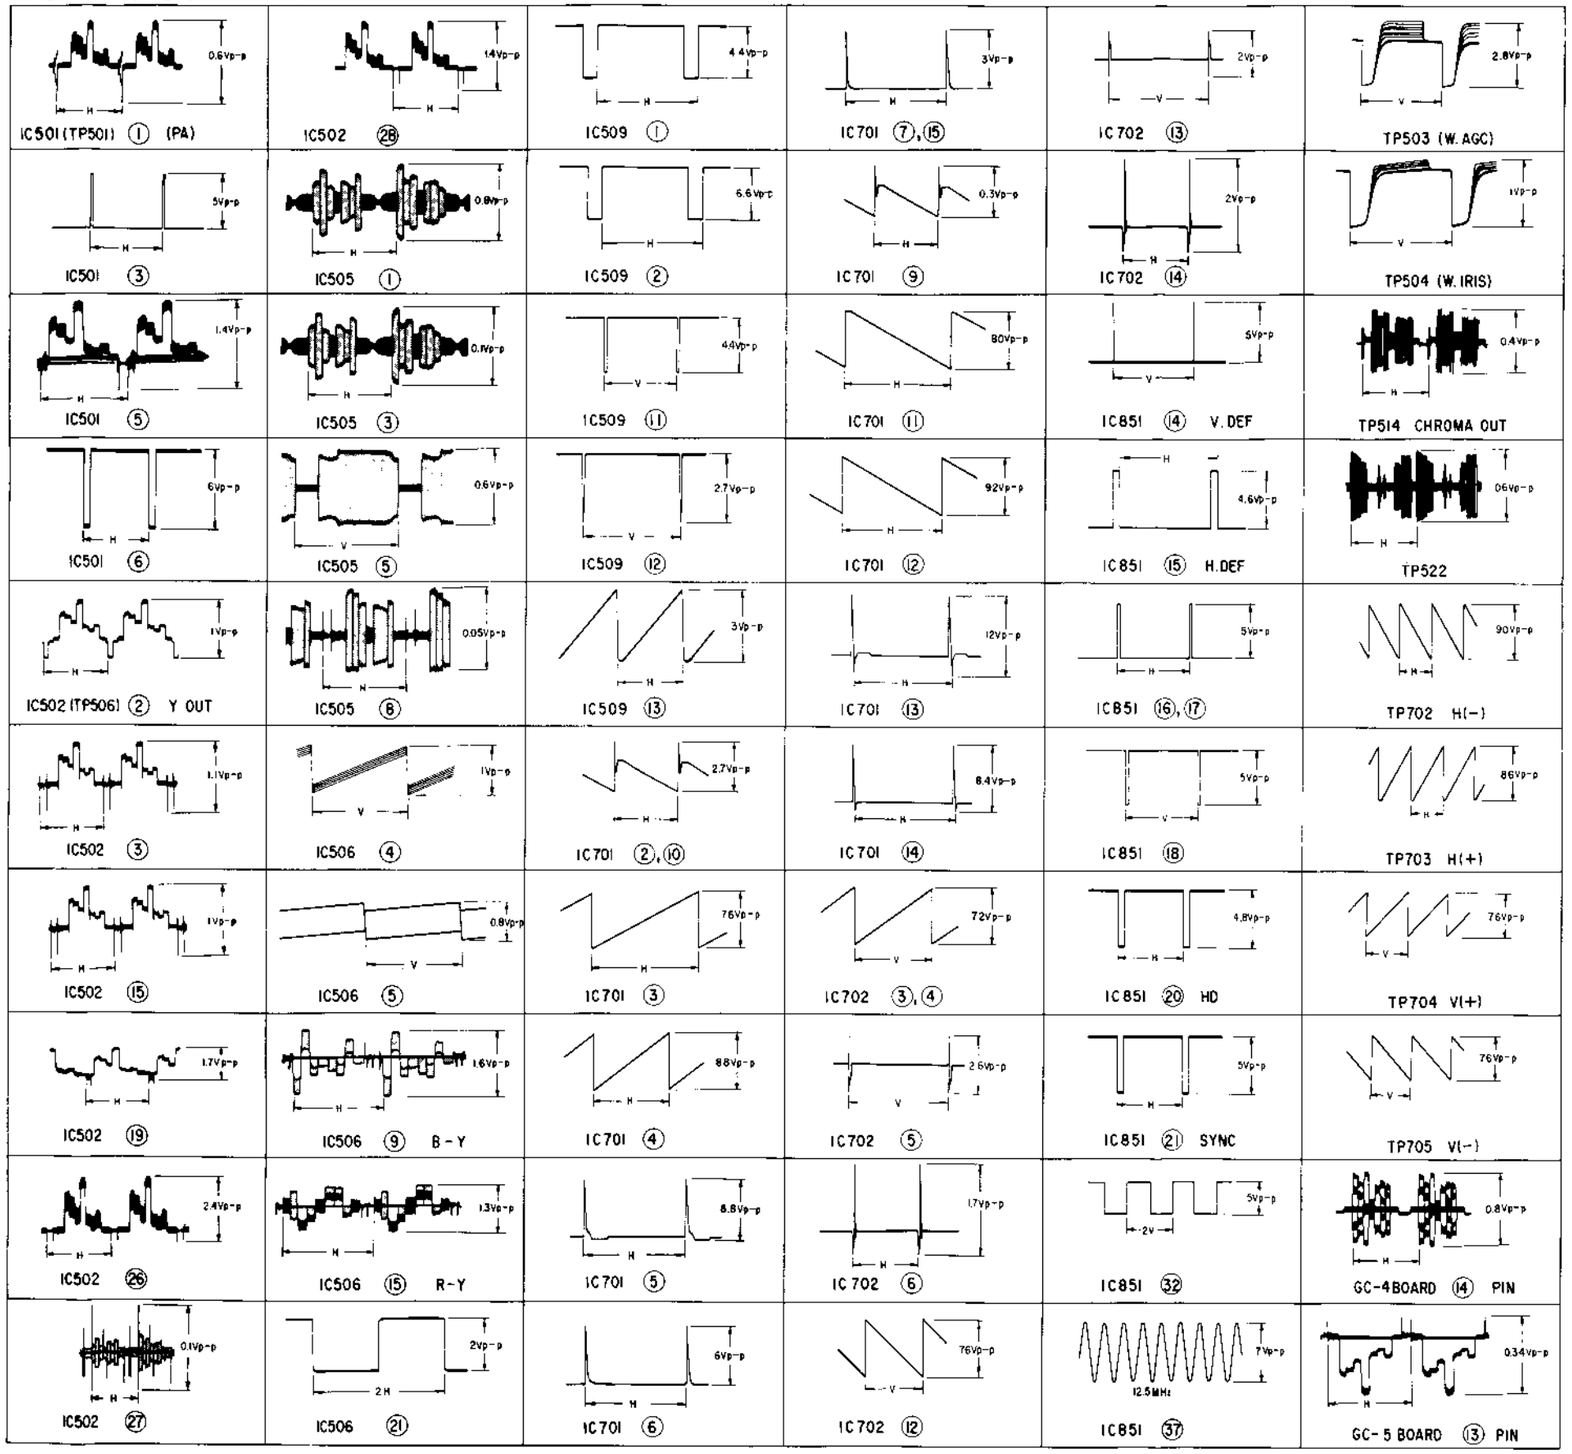
VC-2 BOARD (CAMERA) H: 1.2f_H (18.9kHz)



4-2. SCHEMATIC DIAGRAMS AND PRINTED WIRING BOARDS

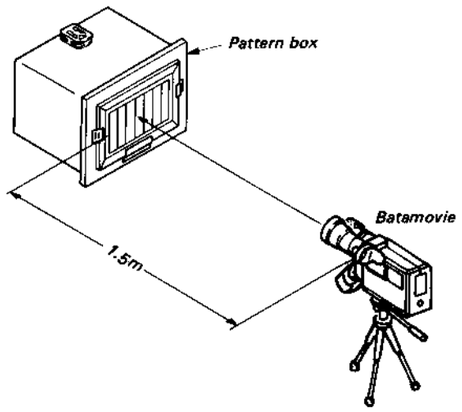
Note: The components identified by shading and mark ⚠ are critical for safety. Replace only with part number specified.

When indicating parts by reference number, please include the board name.

Note:

- Caution when replacing tip parts.
  New parts must be attached after removal of tip
  Be careful not to heat the minus side of tantalum capacitor, because it is damaged by the heat.
- All resistors are in ohms, 1/10W unless otherwise noted.
  kΩ : 1000Ω, MΩ : 1000kΩ
- All capacitors are in μF unless otherwise noted. pF : μμF
  50WV or less are not indicated except for electrolytics and tantalums.
- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.
- ▭ : panel designation.
- ⊗ : Through hole.
- ▭ : nonflammable resistor.
- ——— : B+ bus.
- ▭ : adjustment for repair.
- Voltage and waveform measuring conditions:
  (1) Sample object: Pattern box color bars.
  (2) Voltage values: Relative to ground, measured with a DC digital multimeter (impedance 10M-ohm more).

1. Connection



2. Shoot the subject so that the picture frame on the monitor is as shown in the figure below.

SECTION 5
EXPLODED VIEWS

NOTE:
- Items with no part number and no description are not stocked because they are seldom required for routine service.
- The construction parts of an assembled part are indicated with a collation number in the remark column.

- Items marked " ♦ " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

The components identified by shading and mark ⚠ are critical for safety. Replace only with part number specified.

SECTION 6
ELECTRICAL PARTS LIST

When indicating parts by reference number, please include the board name.

NOTE:

- The components identified by shading and mark ⚠ are critical for safety. Replace only with part number specified.
- ⇒: Due to standardization, interchangeable replacements may be substituted for parts specified in the diagrams.
- Items marked " ♣ " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.

CAPACITORS
- MF : μF, PF : μμF

RESISTORS
- All resistors are in ohms
- F : nonflammable

COILS
- MMH : mH, UH : μH

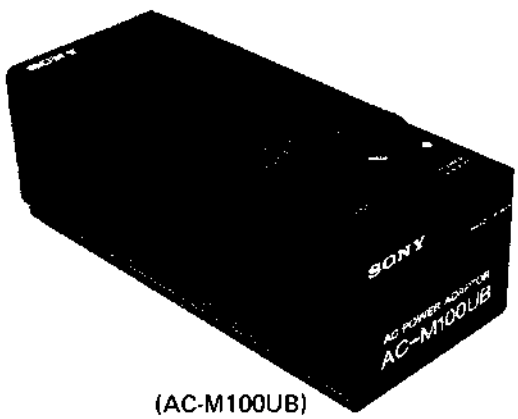
E Model
(AC-M110E)



(AC-M100UB)

SPECIFICATIONS

Power requirements	110 – 240 V ac, 50/60 Hz
Power consumption	26 W
Output voltage	9.6 V dc
Output current	1.0 A
Charging voltage	14 V dc
Charging current	1.2 A
Rechargeable battery	NP-11
Operating temperatures	0°C to 40°C (32°F to 104°F)
Storage temperatures	–20°C to +65°C (–4°F to 149°F)
Dimensions	Approx. 88 × 78 × 212 mm (w/h/d) ($3\frac{1}{2} \times 3\frac{1}{8} \times 8\frac{3}{8}$ inches)
Weight	Approx. 1.1 kg (2 lb 7 oz) net
Cord length	Mains lead: Approx. 2.2 m (7.2 feet)
	DC OUT cord: Approx. 2 m (6.5 feet)
Supplied accessory	AC plug adaptor (1) . . . AC-M110E (E Model) only

AC POWER ADAPTOR

SONY

SECTION 1
OUTLINE

1-1. FEATURES

The AC-M100E/M100UB/M110E ac power adaptor is designed to enable the BMC-100 or BMC-100P Betamovie to operate from house current. It can also be used for charging the NP-11 battery pack.

1-2. PRECAUTIONS

On safety

● This ac power adaptor operates on 110–240 V ac without any voltage adaptation.

FOR AC-M100UB (UK MODEL)

IMPORTANT

The wires in the mains lead are coloured in accordance with the following code:

Blue: Neutral

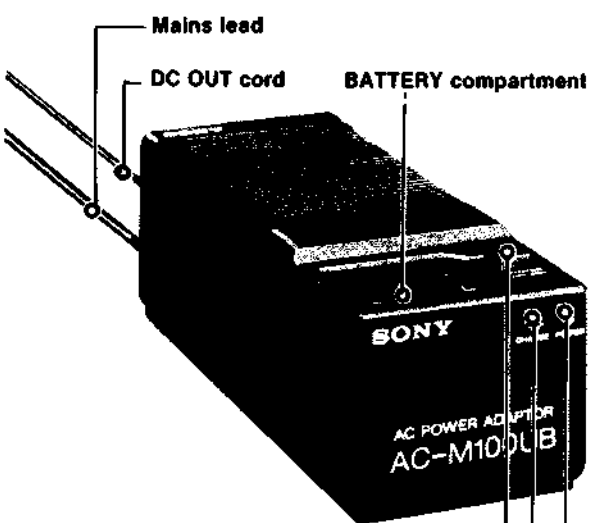
Brown: Live

As the colours of the wires in the mains lead of this apparatus may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows:

The wire which is coloured blue must be connected to the terminal which is marked with the letter N or coloured black.

The wire which is coloured brown must be connected to the terminal which is marked with the letter L or coloured red.

1-3. LOCATION AND FUNCTION OF PARTS



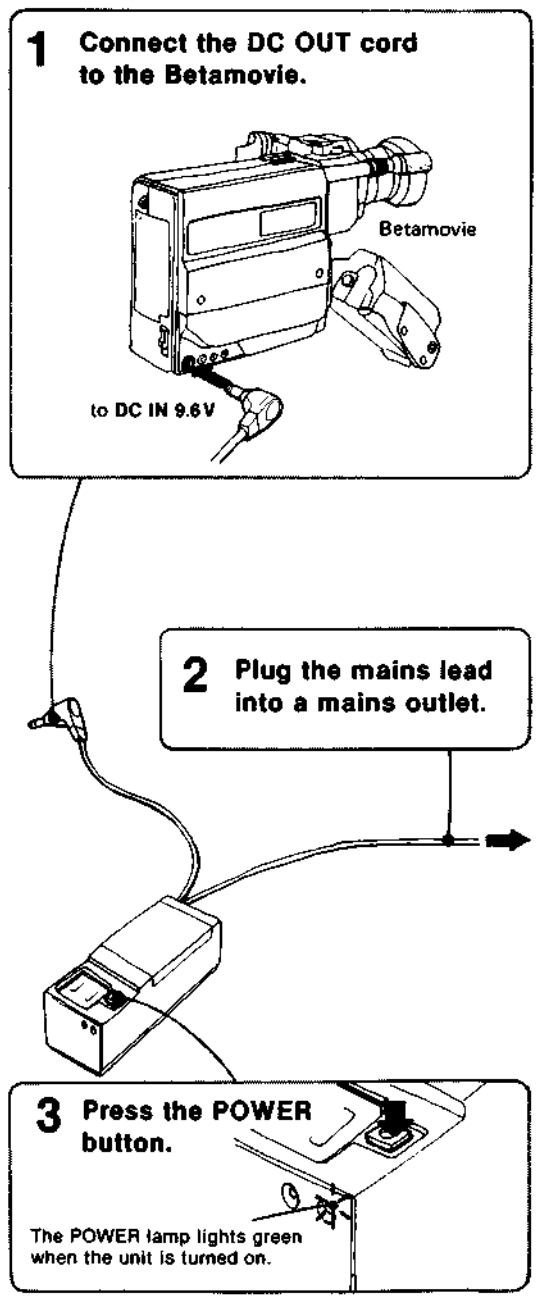
POWER button
Push down to turn the unit on.
If a battery pack is inserted, charging starts.

CHARGE lamp
Lights (orange) while the inserted battery pack is being charged.

POWER lamp
Lights (green) when the power is turned on.

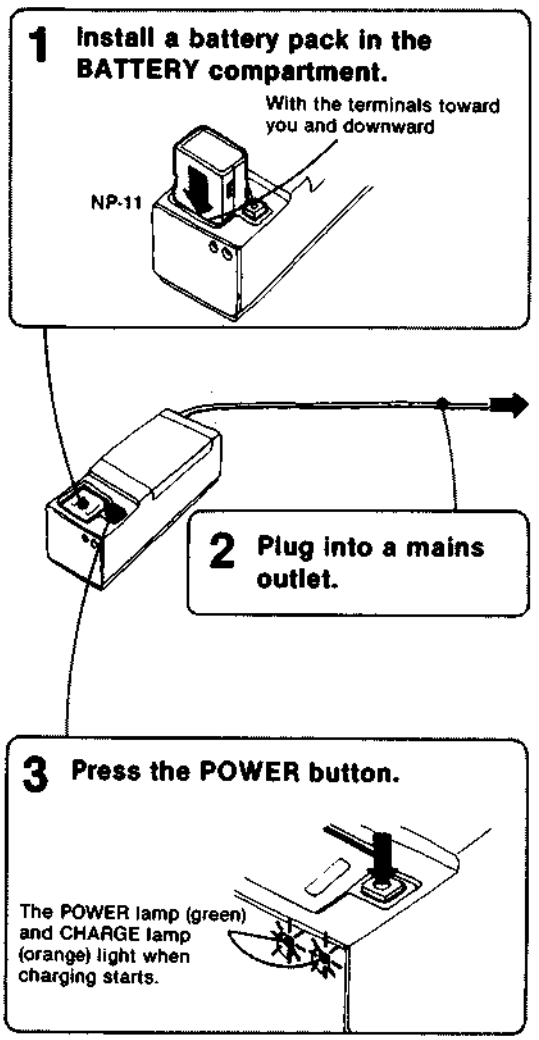
1-4. INSTRUCTION

AC POWER OPERATION OF THE BETAMOVIE



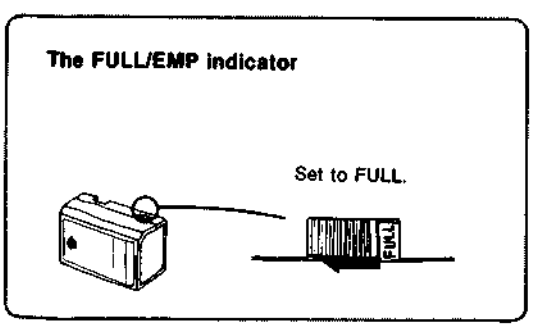
To turn the Betamovie on and off, press the POWER button of the Betamovie.

CHARGING THE BATTERY PACK



Charging time at normal temperature
NP-11: Approx. 1 hour

When the battery has been fully charged
The charging will stop automatically and the CHARGE lamp will go off.
Turn the adaptor off and remove the battery pack.



The charging temperature range
The battery pack can be charged from 5°C to 40°C (41°F to 104°F).

The Betamovie cannot be operated during charging.
If the POWER button is pressed when there is a battery pack in the BATTERY compartment, the adaptor is automatically set to the charging mode and power is not supplied to the Betamovie.

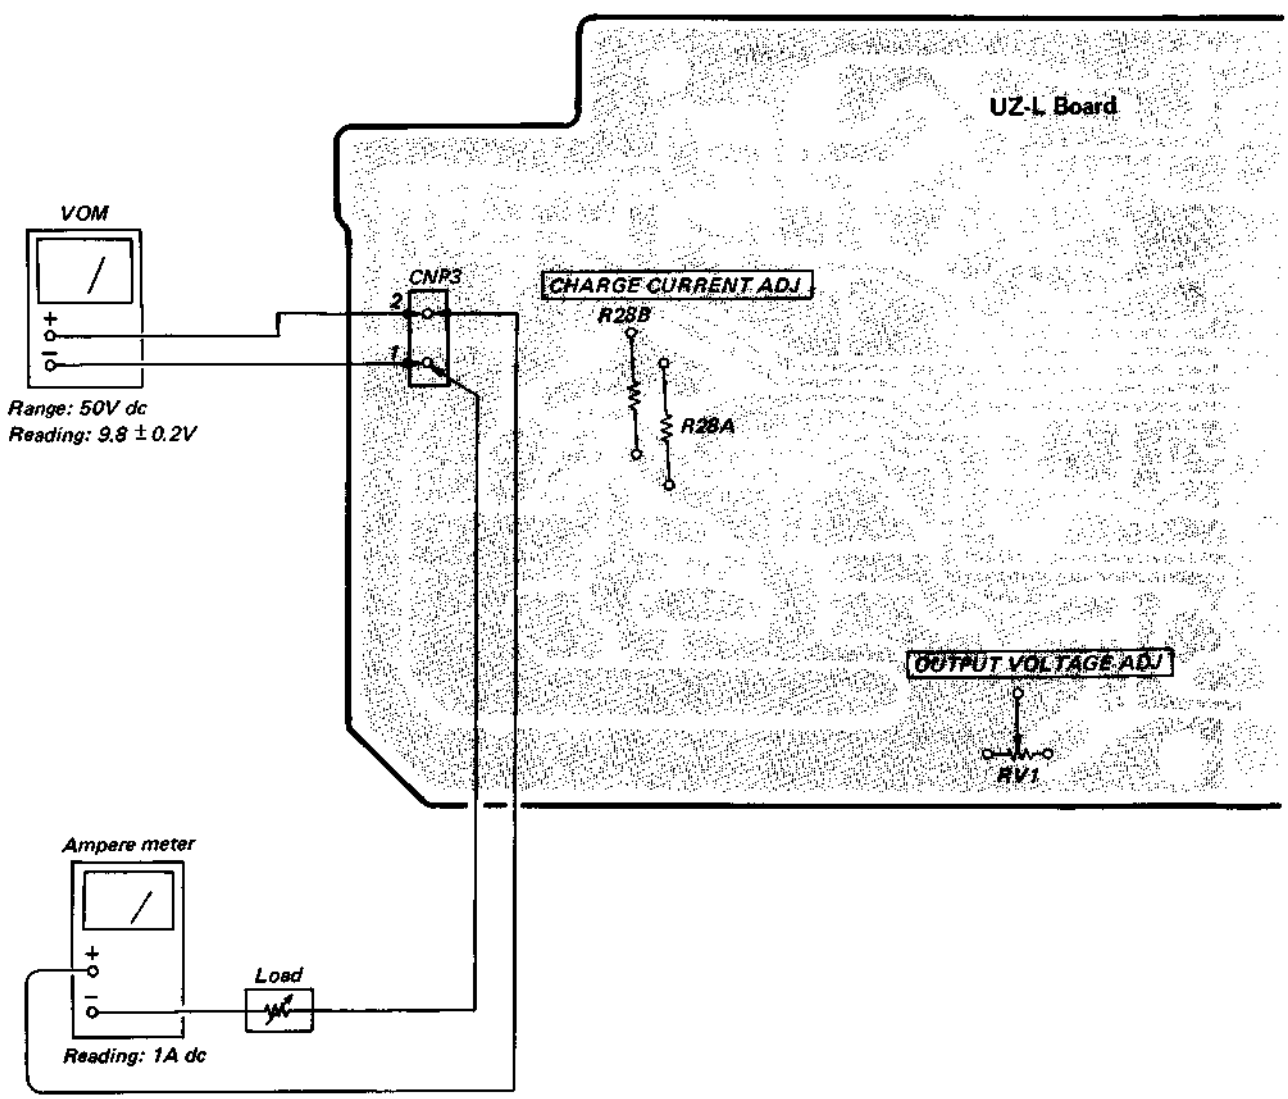
SECTION 2
ADJUSTMENTS

OUTPUT VOLTAGE ADJ

1) Connect a VOM and ampere meter as shown below.
2) Adjust RV1 for 9.8 ± 0.2V dc on the VOM.

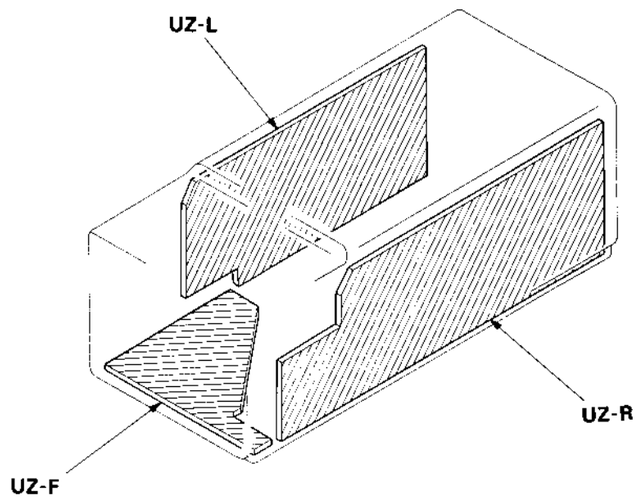
CHARGE CURRENT ADJ

1) Short-circuit between two battery terminals on UZ-F board.
2) Mount or disconnect a 12kΩ ¼W carbon resistor (R28B) as shown below, so that the charge current is 1.25 ± 0.2A.

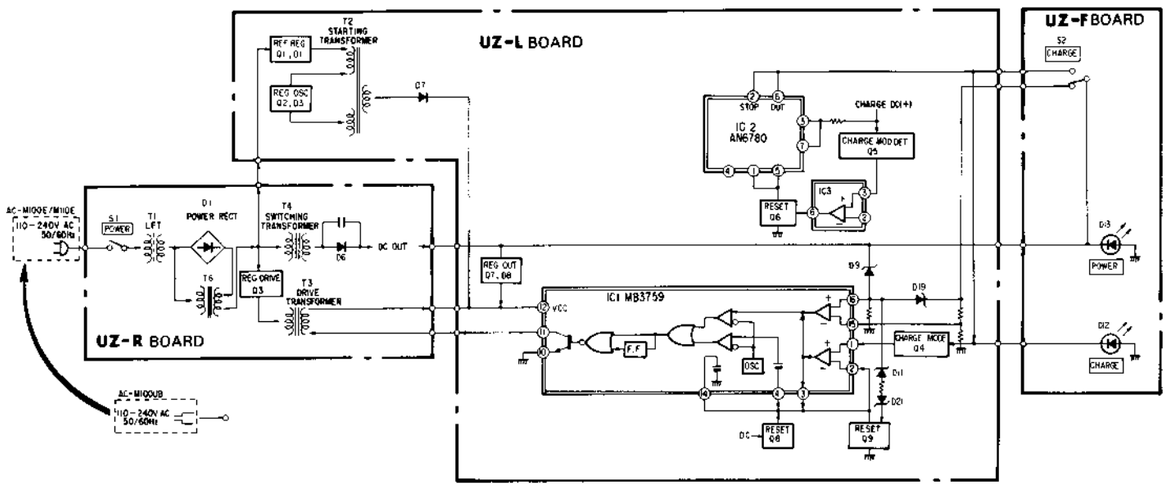


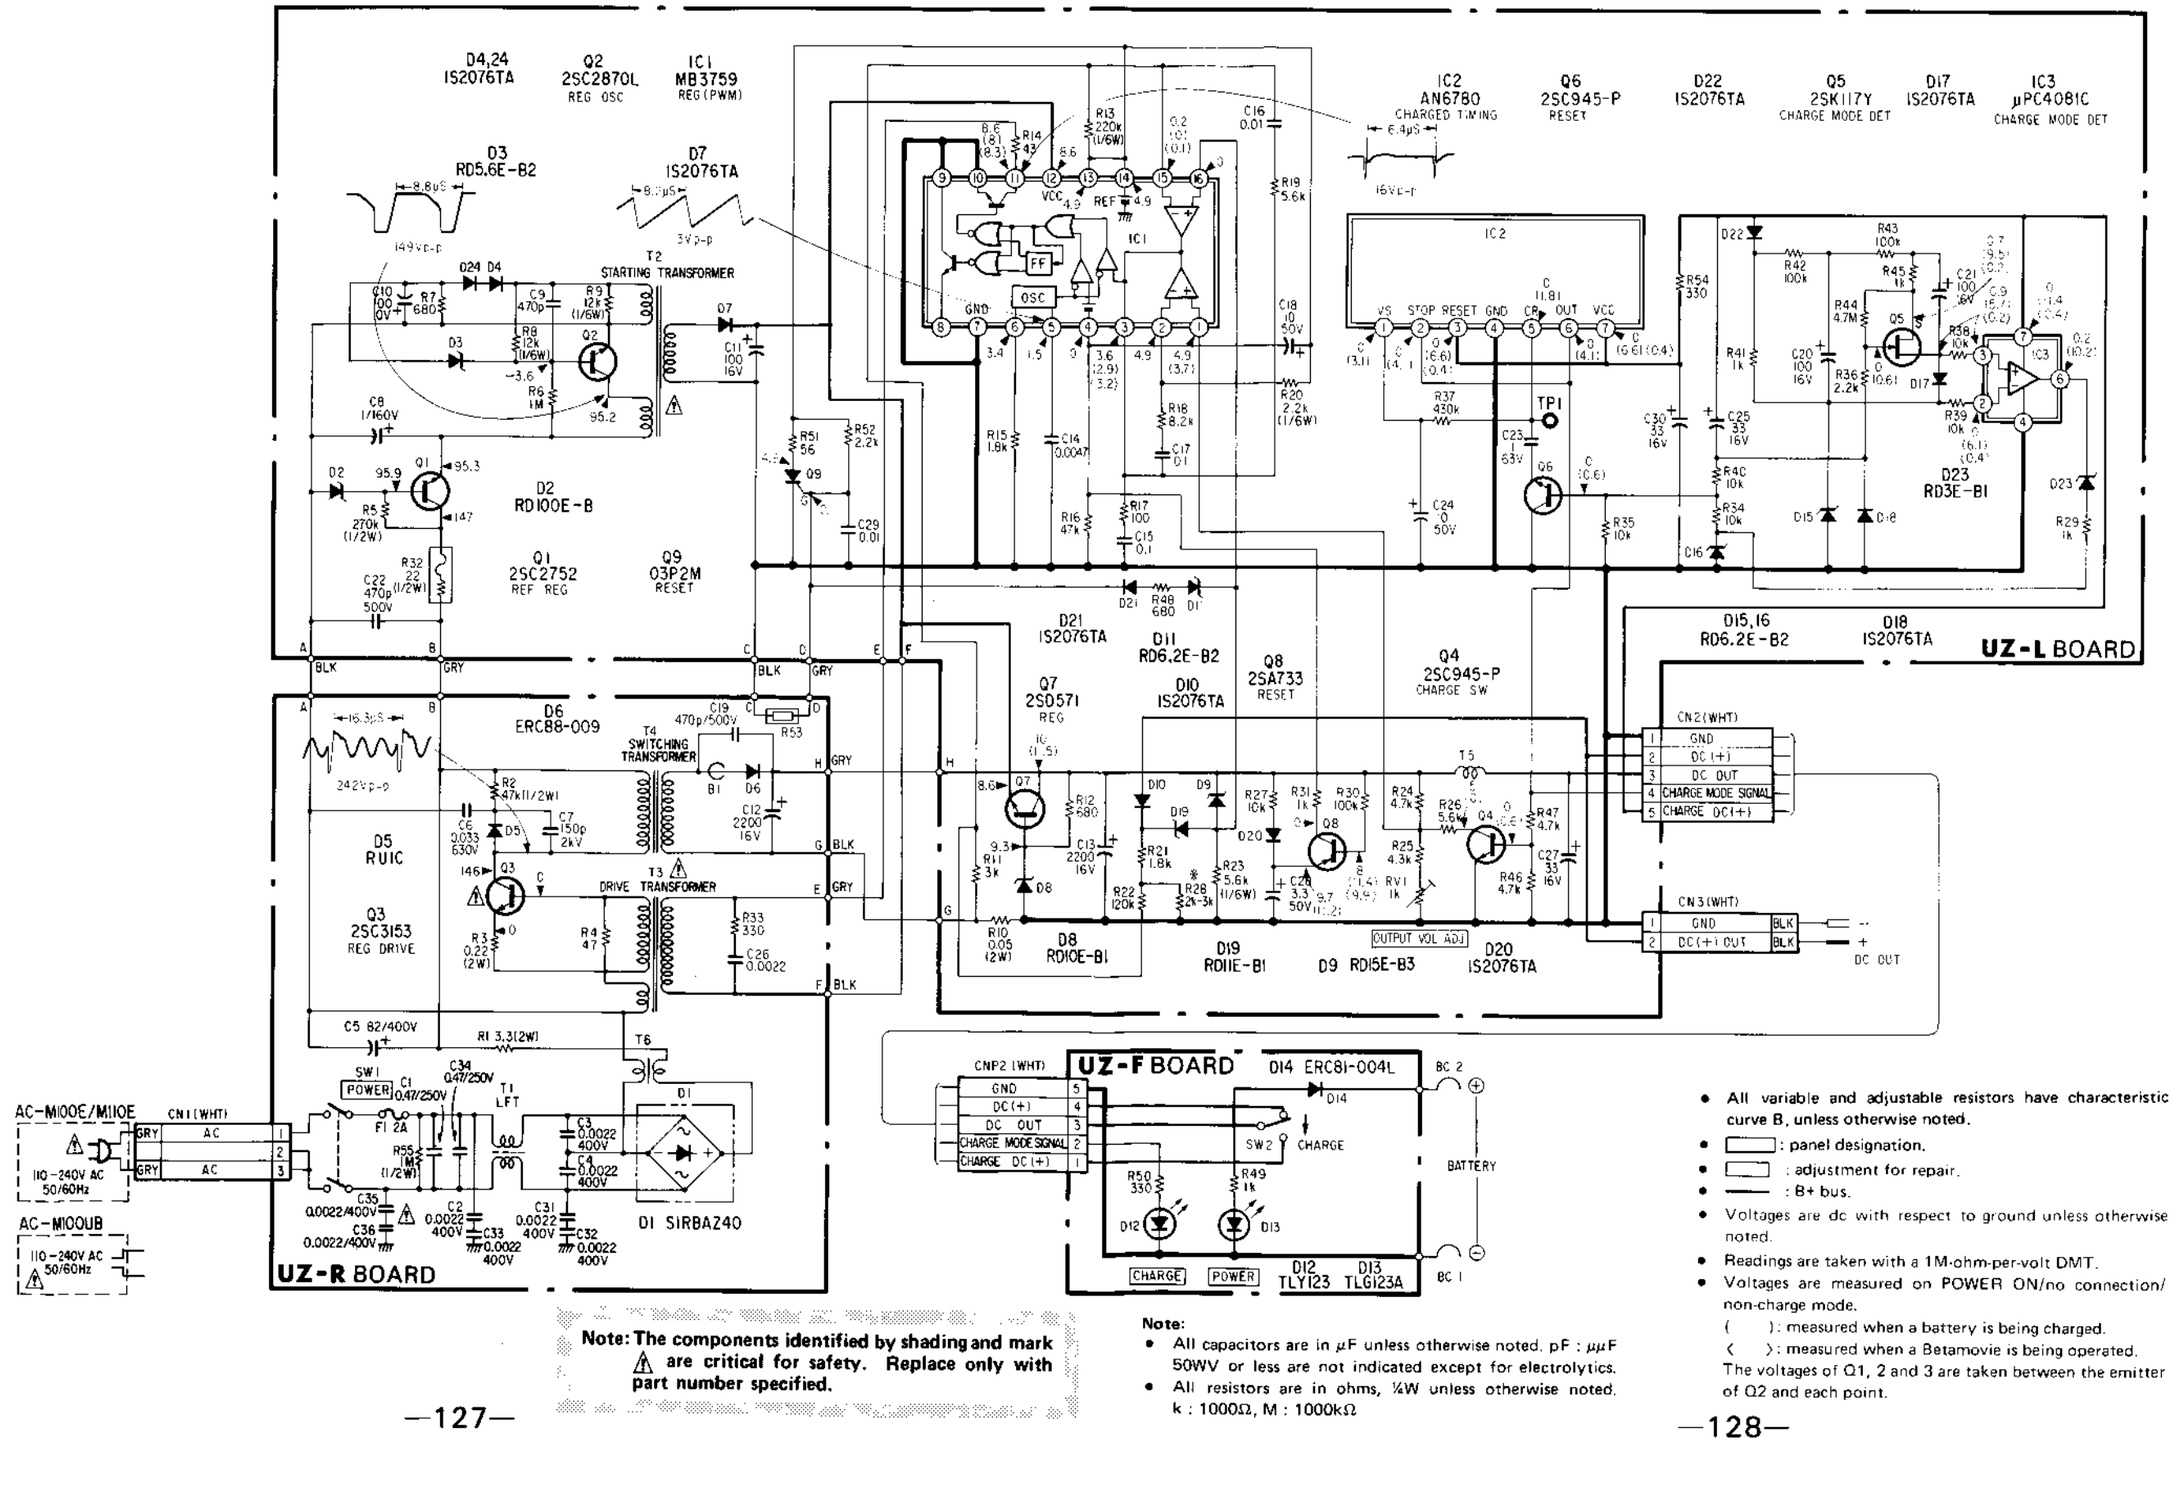
SECTION 3
DIAGRAMS

3-1. CIRCUIT BOARDS LOCATION



3-2. BLOCK DIAGRAM





Note: The components identified by shading and mark ⚠ are critical for safety. Replace only with part number specified.

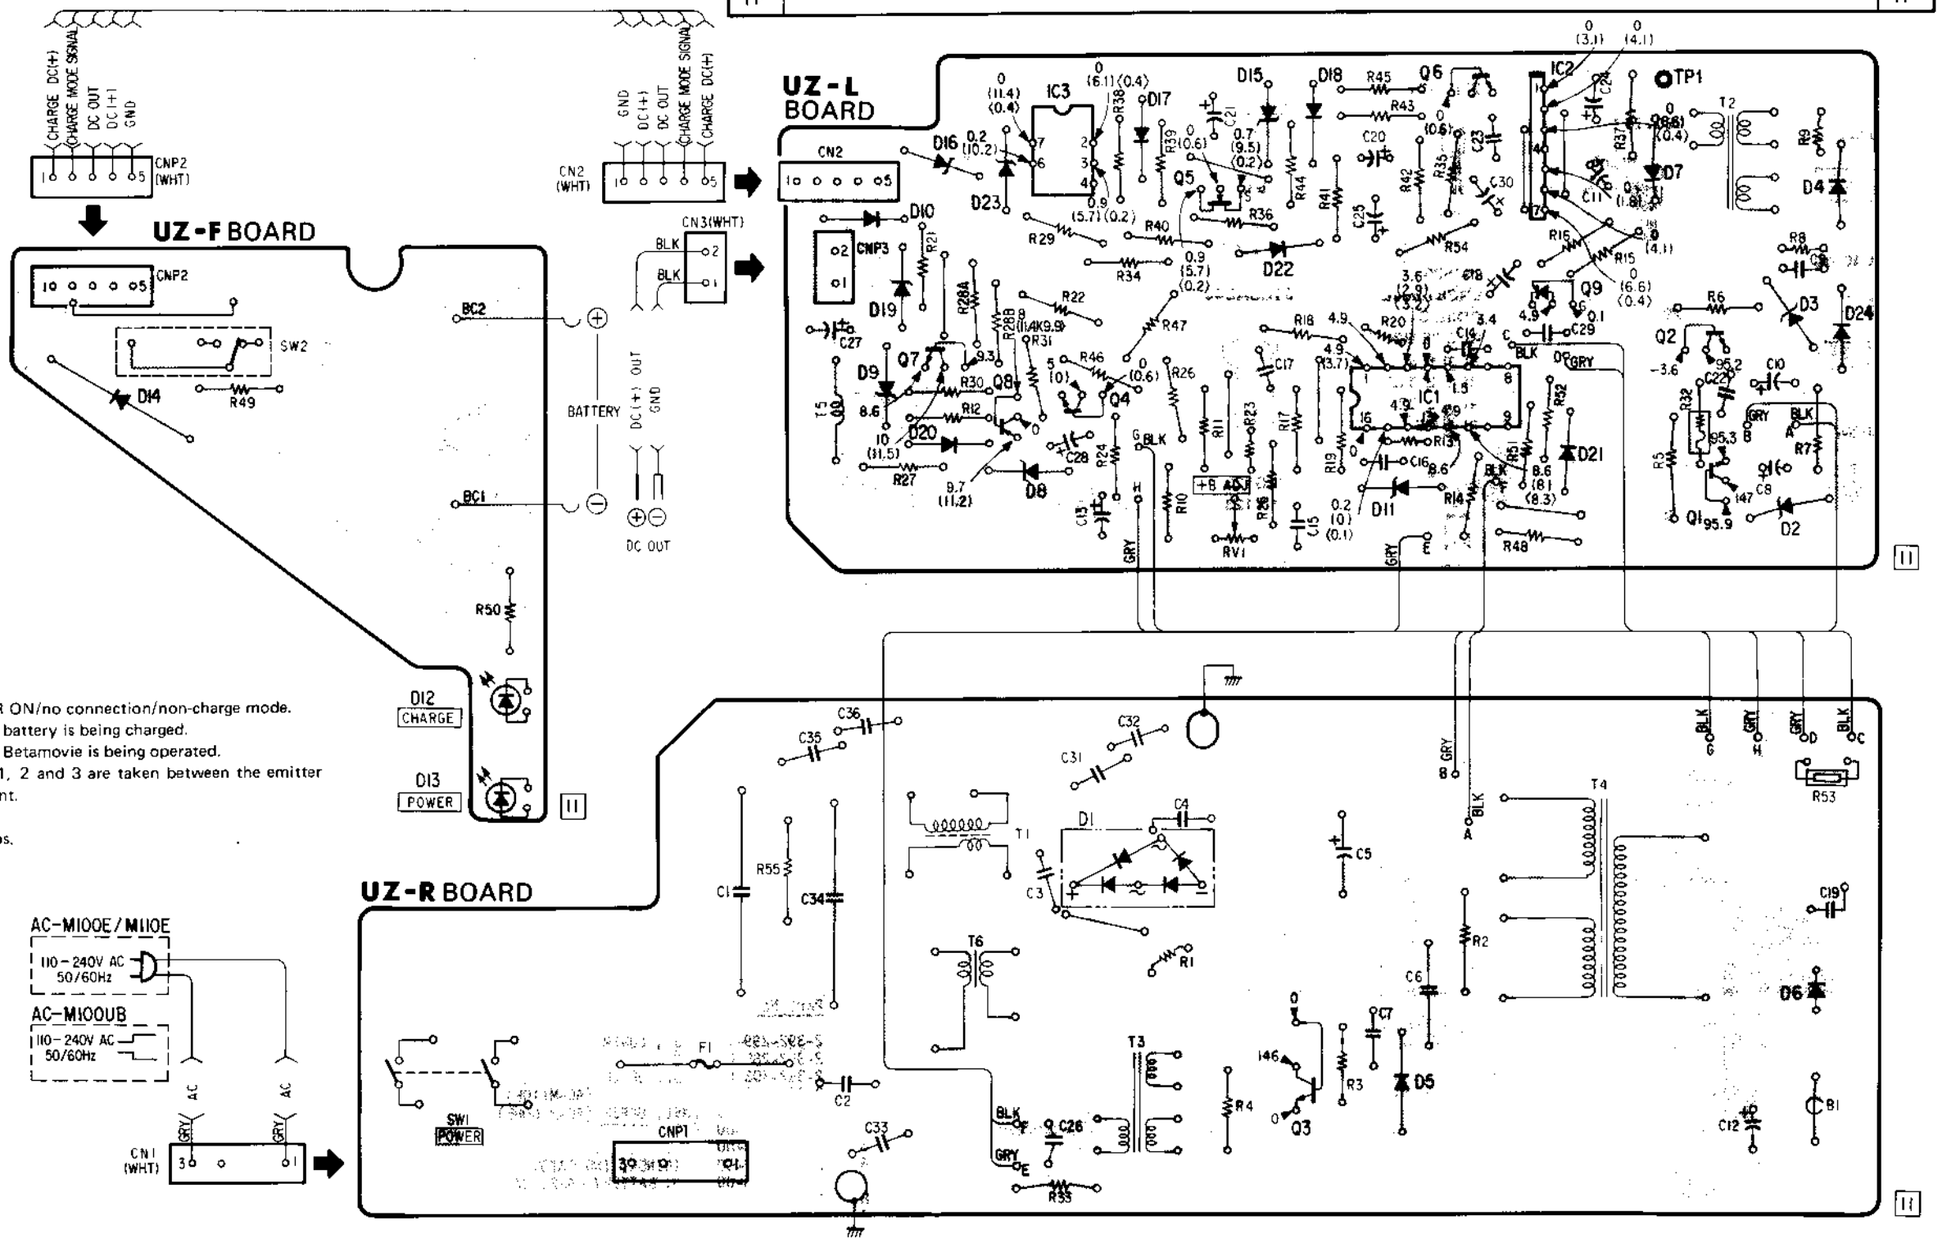
Note:

- All capacitors are in μF unless otherwise noted. pF : μμF 50WV or less are not indicated except for electrolytics.
- All resistors are in ohms, ¼W unless otherwise noted. k : 1000Ω, M : 1000kΩ

- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.
- ▭ : panel designation.
- ▭ : adjustment for repair.
- ——— : B+ bus.
- Voltages are dc with respect to ground unless otherwise noted.
- Readings are taken with a 1M-ohm-per-volt DMT.
- Voltages are measured on POWER ON/no connection/non-charge mode.
  ( ) : measured when a battery is being charged.
  〈 〉 : measured when a Betamovie is being operated.
  The voltages of Q1, 2 and 3 are taken between the emitter of Q2 and each point.

UZ-F **UZ-R** **UZ-L** **UZ-R**

Q IC	IC3: 7, 8, 4, 5 — IC1: 6 — IC2: 9, 1, 2	Q IC
D	10, 9, 19, 16, 20, 23, 8, 17, 15, 22, 18, 11, 21, 7, 2, 3, 4, 24	D
ADJ	RV1	ADJ
TP	1	TP



Note:

no mark : POWER ON/no connection/non-charge mode.
( ) : When a battery is being charged.
〈 〉 : When a Betamovie is being operated.
The voltages of Q1, 2 and 3 are taken between the emitter of Q2 and each point.

• : B+ bus.

4-2. CHASSIS ASSEMBLY

SUPPLEMENT-1

File this supplement-1 with the service manual.

Subject: Change and Correction of BMC-100P/100PK Repair Part Names

(1) Change of names for GC-4 and GC-5 board names

Previous name		New name
GC-4 Board	⟶	GC-6 Board
GC-5 Board	⟶	GC-7 Board

(2) Cautions required due change in zoom lens ass'y

(3) Addition and change of repair parts

(4) There were some mistakes in the names of the semiconductor products. Please correct.

MICROFILM

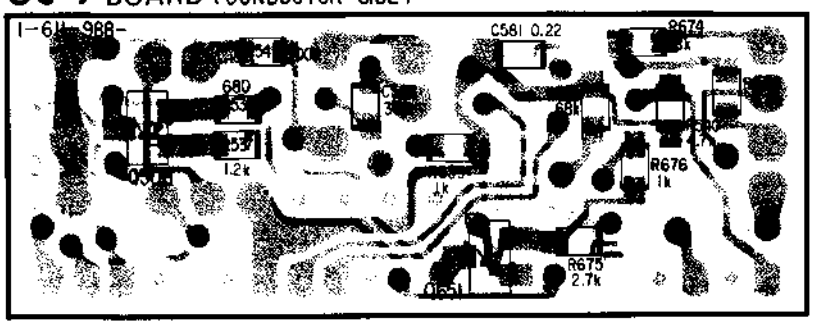
Consumer VIDEO

(1) Change of names for GC-4 and GC-5 board names

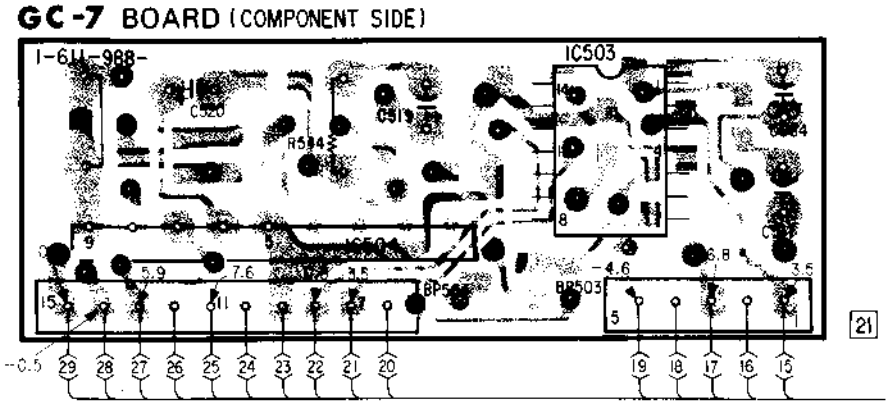
Page 59, 60

The patterns of the GC-4 and GC-5 boards have been slightly modified, and their part Nos. have also been changed.

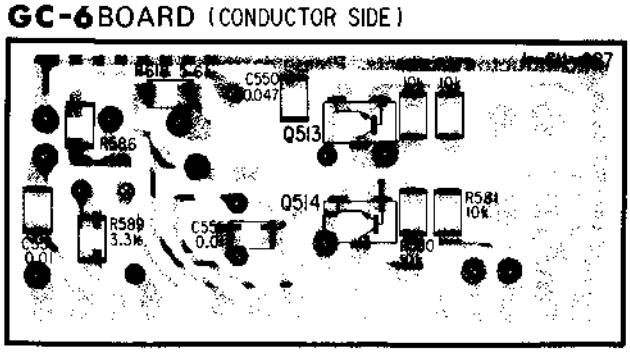
GC-7 BOARD (CONDUCTOR SIDE)



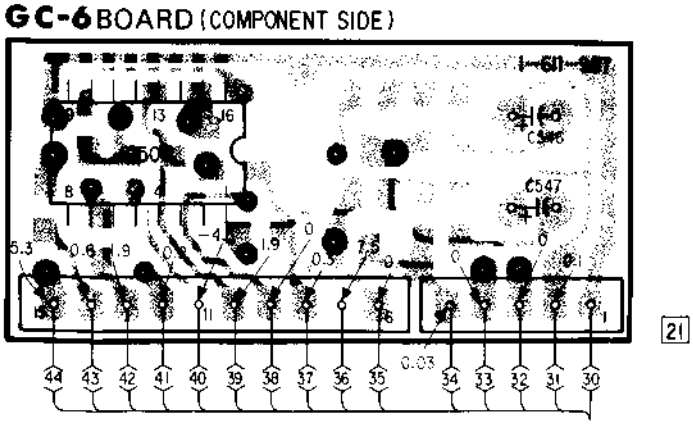
GC-7 BOARD (COMPONENT SIDE)



GC-6 BOARD (CONDUCTOR SIDE)



GC-6 BOARD (COMPONENT SIDE)



Board	Part No.
GC-6	1-611-987-21
GC-7	1-611-988-21

(2) Cautions required due change in zoom lens ass'y

In consequence of the change in zoom lens ass'y (401), now, lens cabinet (10) requires different treatments according to the ass'y versions.

With the zoom lens ass'ies with the shipping mark label codes ending in 1 or subsequent alphabetic letters in red stamp (Fig. 2), the following lens cabinet should be used.

X-3681-485-1 Lens Cabinet (TL) Ass'y

Note that the zoom lens ass'ies with the mark codes ending in A through H in black stamp are used with the previous lens cabinets.

X-3681-442-0 Lens Cabinet (T) Ass'y

SECTION 1
PREPARATION BEFORE ADJUSTMENT (CAMERA SECTION)

1-1. LIST OF SERVICING JIGS

Oscilloscope; digital electronic voltmeter (4 digits); AC adapter; adjusting screwdriver; L-wrench; level; special purpose color monitor.

Ref No.	Name	Part code	Use
J 1	Jig for oscillating 5.4MHz Note: To be remodeled from a 4.5MHz oscillator jig.	J-6023-420-A ※ Crystal replacement	H size adjustment
	Part requred for remodeling: (5.4MHz crystal)	J-6080-809-A	
J 2	Red filter	J-6080-059-A	Focus adjustment, HV phase correction adjustment
J 3	ND filter 0.4	J-6080-806-A	x2 beam adjustment, LLA adjustment
	ND filter 0.1	J-6080-807-A	LLA adjustment
	ND filter 1.0	J-6080-808-A	LLA adjustment
J 4	Pattern box PTB-100 (For 90–130V ac) PTB-200 (For 190–240V ac)	 J-6020-490-A J-6020-680-A	
J 5	Color chart	J-6020-250-A	
J 6	Signal converter BMCJ-888P	J-6080-820-A	x2 beam adjustment, x5 beam adjustment, H size adjustment, flange back adjustment, V size adjustment, V centering adjustment
J 7	2.2Ω standard resistor	J-6080-812-A	Heater constant current adjustment
The following jigs must be produced: (1) Black cap White cap  To be cut from a sheet of black paper.			H balance adjustment, V balance adjustment, bias light adjustment, H size adjustment, dark adjustment, AGC weighting adjustment, iris weighting adjustment, burst level adjustment, carrier balance adjustment
(2) High brightness pattern Bond a sheet of black paper to a cardboard and make a hole 15.5mm in diameter at the center of the paper.  			x2 beam adjustment, x5 beam adjustment, knee adjustment

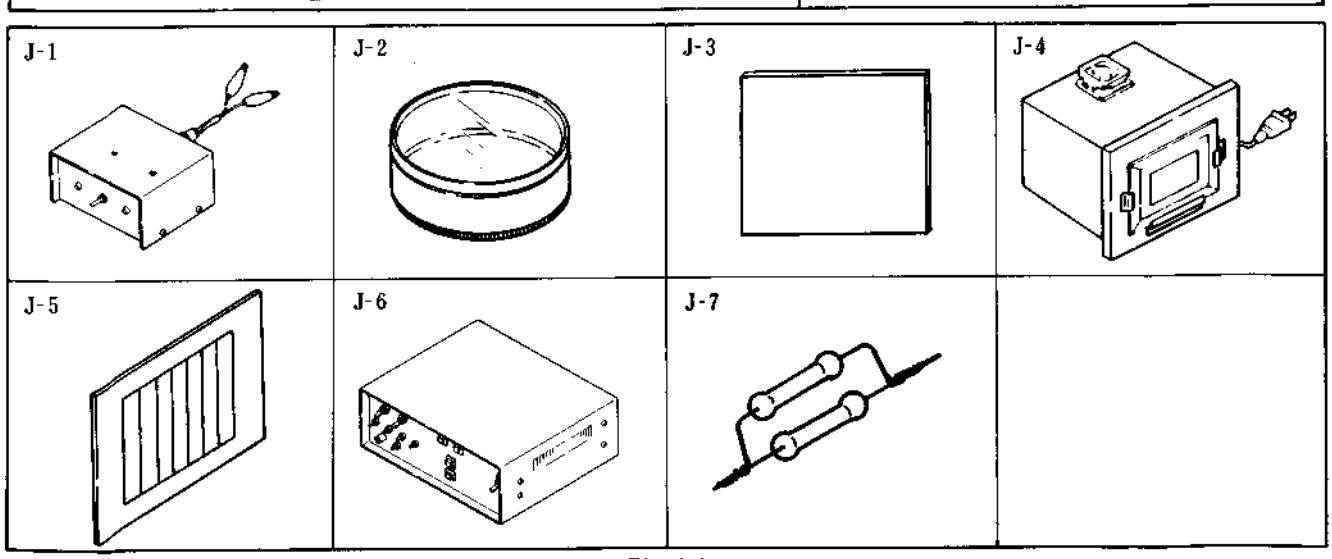

Fig. 1-1

1-2. PREPARATION

1) Set filter selector to ☼ (indoor).
2) Also perform the white balance if there are no special notes ("W" is to be turned off).

1-3. CONNECTION DIAGRAM

1) Set up pattern box and Betamovie as shown below.
2) Level the Betamovie and the pattern box, and place the in same height.

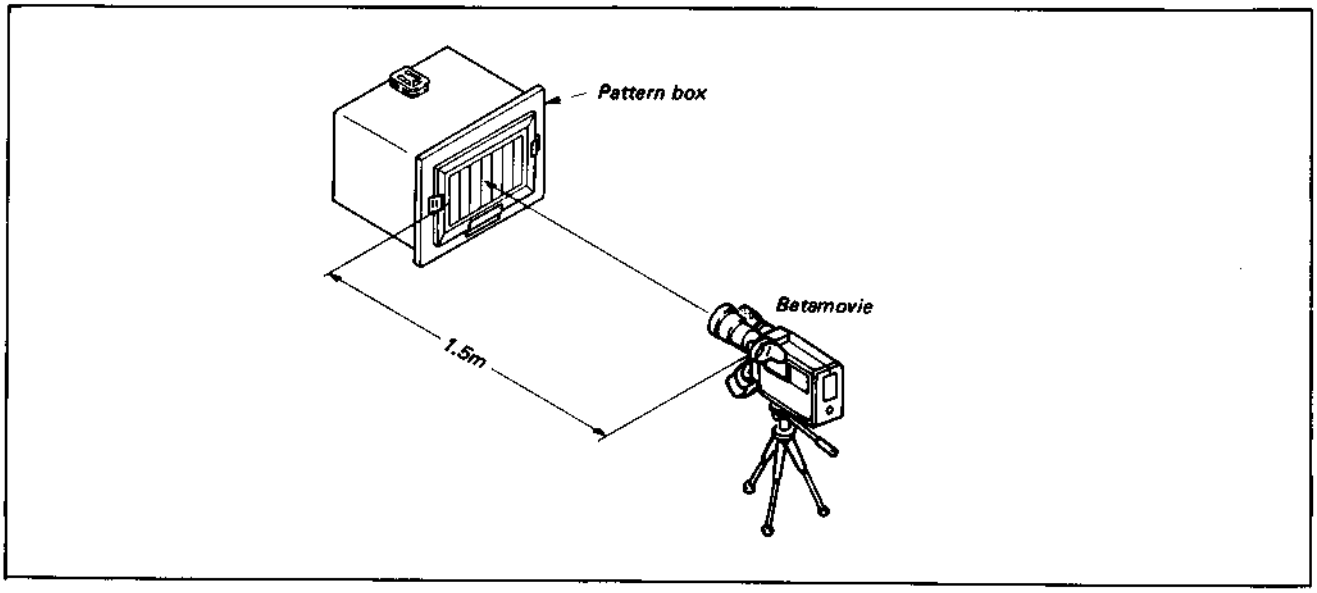

Fig. 1-2

3) Connect Betamovie, signal converter BMCJ-888P and special purpose monitor together as shown below.

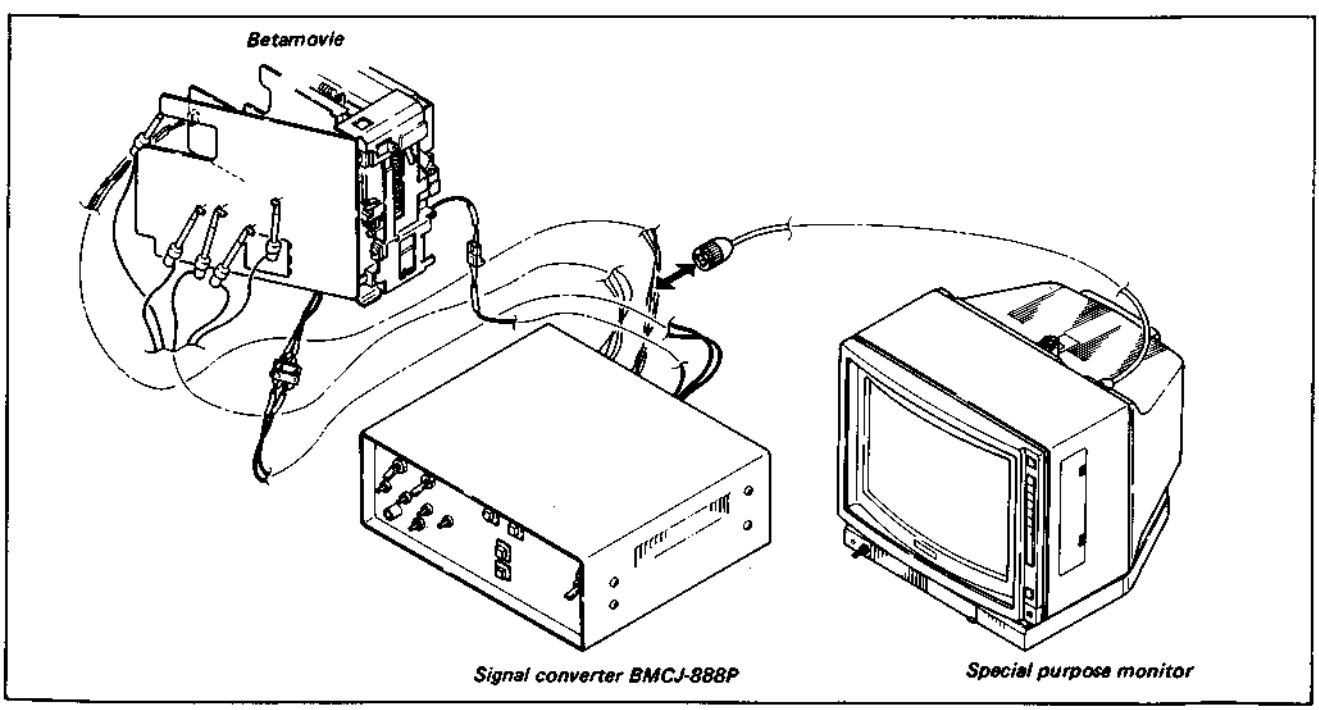

Fig. 1-3

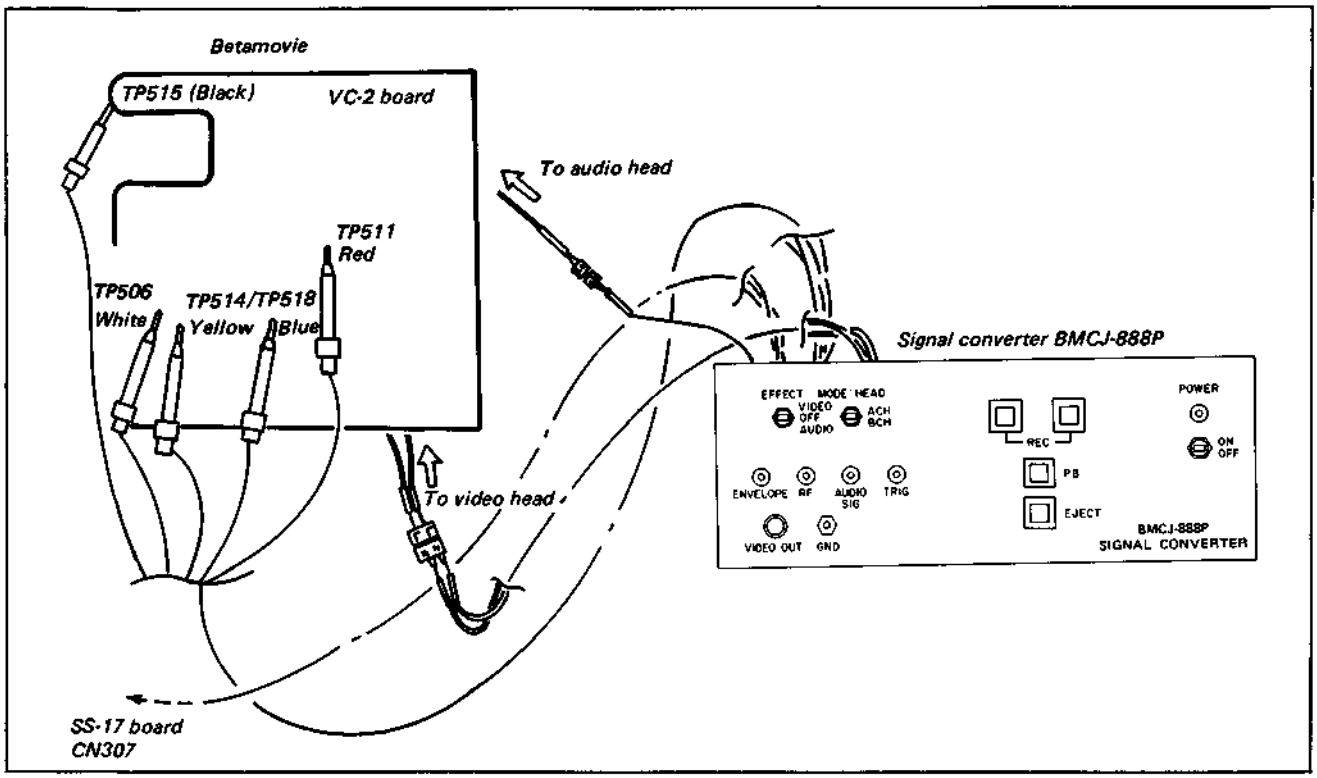

Fig. 1-4

1-4. EYESIGHT ADJUSTMENT

Adjusting Procedure:

1) Direct camera toward a bright, plain object such as white paper.
2) Turn the eyesight adjusting knob so as to make finder frame clearly recognizable.

1-5. PROCEDURE FOR DETERMINING MONITOR CENTER (RASTER CENTER) OF SPECIAL PURPOSE MONITOR FOR BETAMOVIE

This is required for "OVF and optical axis confirmation" and "V centering adjustment".

Note: Use a normal set for the determination.

Oscilloscope: TP506
Object: High brightness pattern
Zoom lever: 30 mm

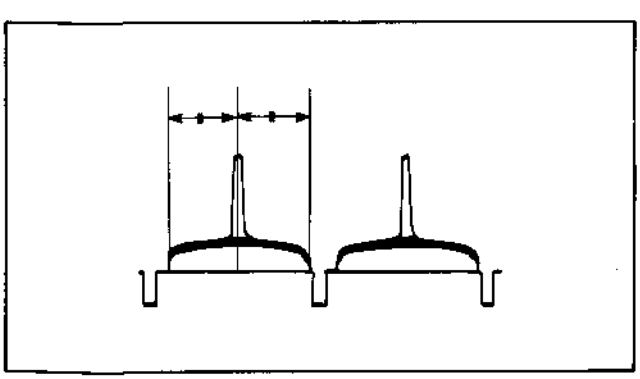

Fig. 1-5

1) Oscilloscope TIME/DIV: 20μsec (H)
   Adjust universal head to the left or right so as to position the spot portion to the center.
2) Oscilloscope TIME/DIV: 5msec (V)
   Adjust universal head upward or downward so as to position the spot portion to the center.

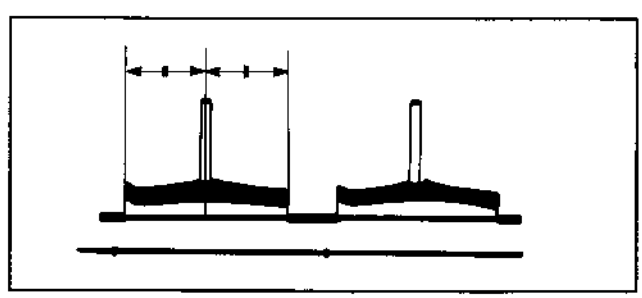

Fig. 1-6

3) Use the center of spot displayed on the monitor screen as monitor center. (Show a mark on the monitor center')

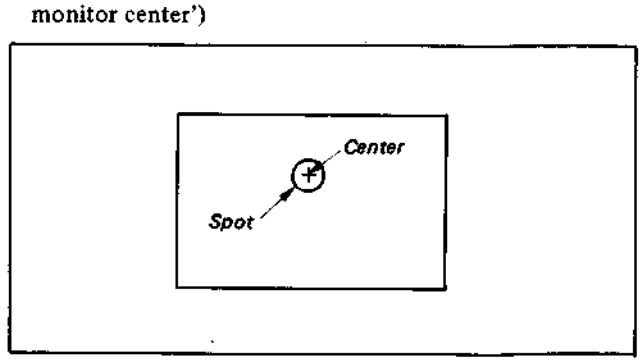

Fig. 1-7

1-6. PRECAUTIONS

(1)

Be sure to take the following precautions before starting adjustment:

1) SMF Trinicon tube may be easily burned if there is incident light before a rise of beam. Therefore, be sure to prohibit the entry of light in lens before beam adjustment. (Do not direct camera to a light source.)

2) Adjust color pattern by fully aligning to the bottom side. (If this is not performed, the weighting circuit begins to operate and normal iris and AGC operation will not occur.)

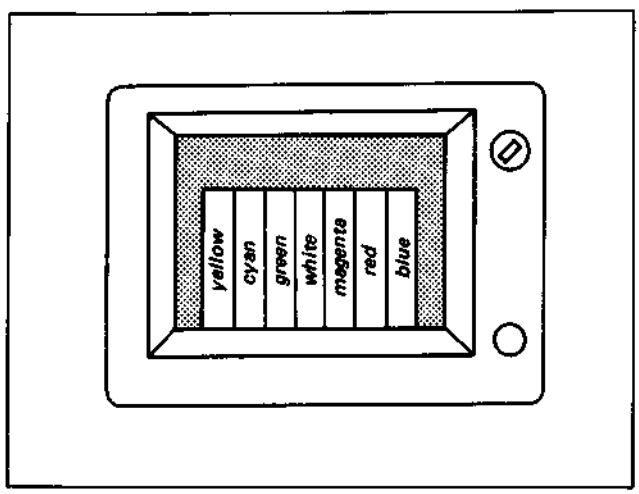

Fig. 1-8

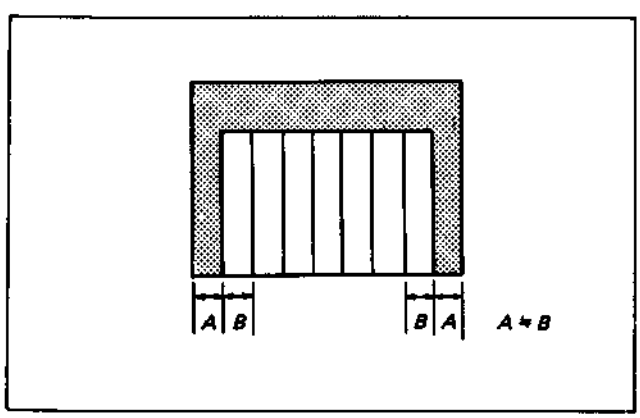

Fig. 1-9

(2) VC-2 board

High voltage is applied to the hatched portion. Your may have an electric shock if you touch this portion.

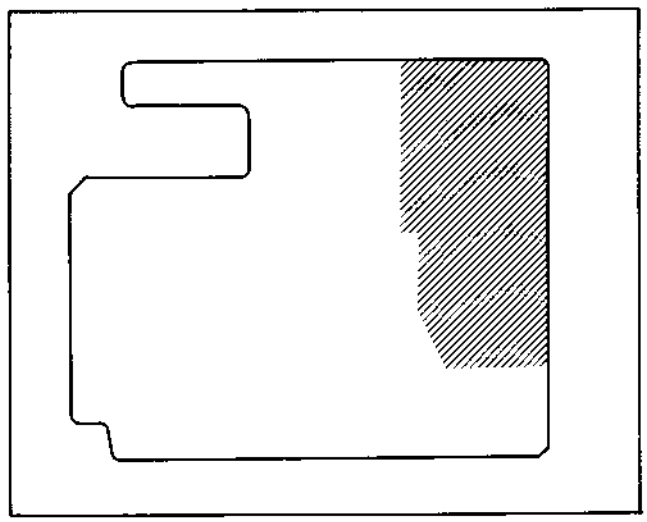

Fig. 1-10

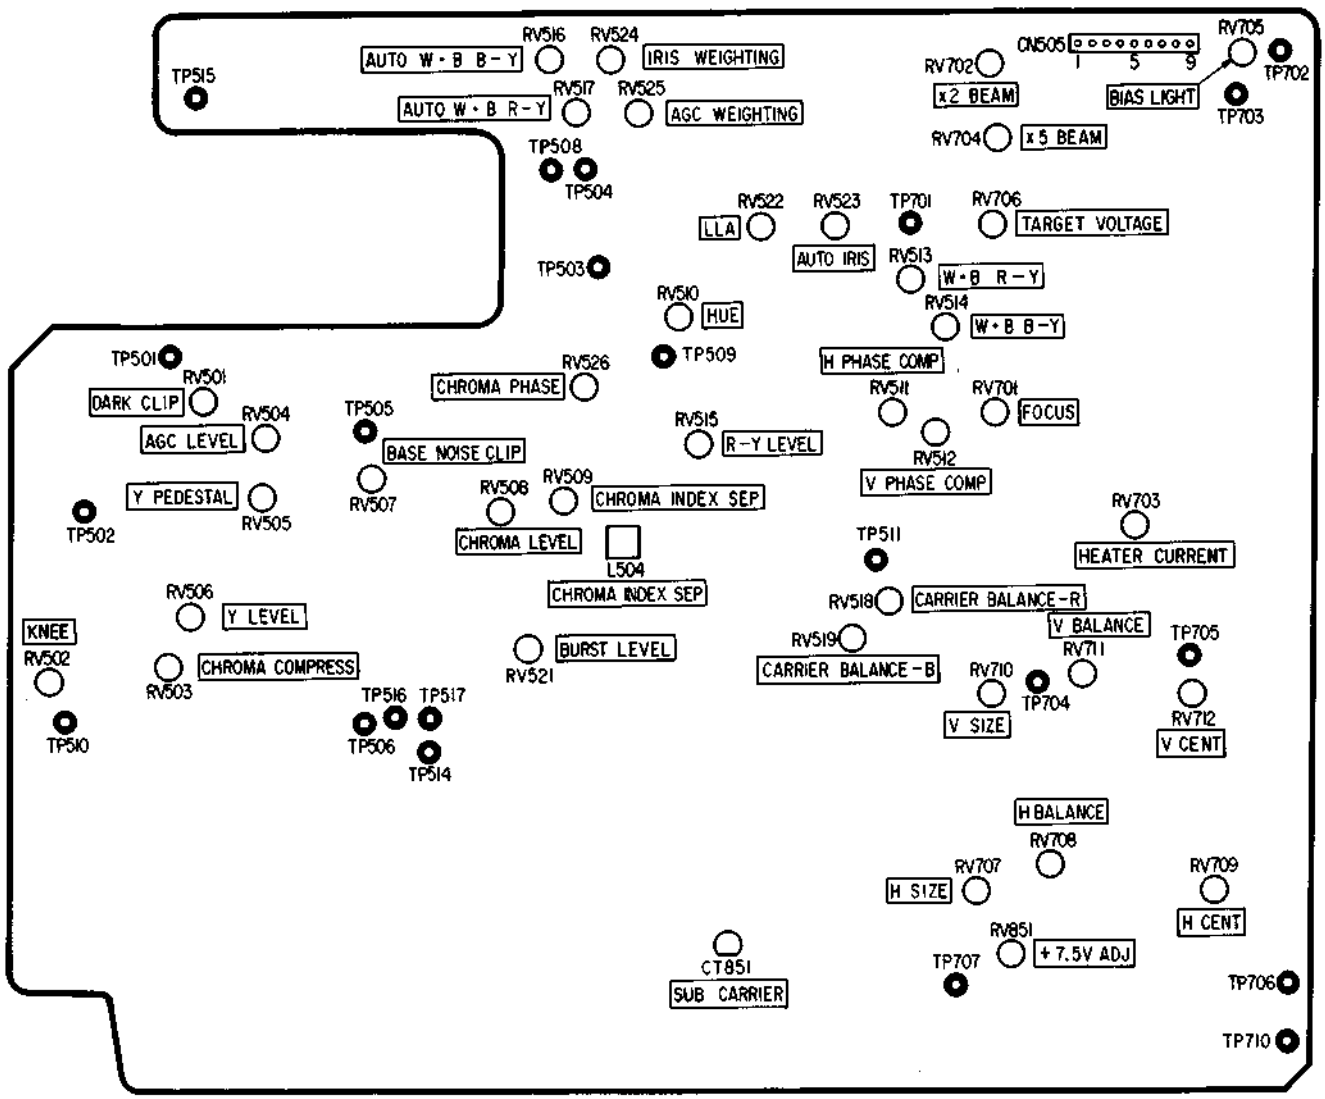
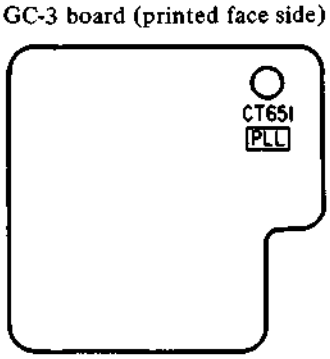
1-7. RV AND TP LOCATION

VC-2 board (printed face side)



GC-3 board (printed face side)



SECTION 2
ADJUSTMENTS (CAMERA SECTION)

2-1. ADJUSTMENT OF 7.5V POWER SUPPLY AND HEATER

2-1-1. Adjustment of +7.5V Power Supply Voltage

Adjusting Procedure:

1) Cover lens with a black cap.
2) Connect ⊕ probe of digital voltmeter to TP706 (7.5V line) and ⊖ probe to TP710.
3) Turn RV851 so as to adjust the voltage at that time to 7.54V ± 0.075V.

Adjusted value: 7.54V ± 0.075V

2-1-2. Adjustment of Constant Current of Heater

Note: This adjustment should be performed only when the following parts were replaced or adjusted:
(Replacement of HV701, adjustment of RV851, replacement of R730, R762, R763, RV703)
* Only the confirmation is necessary when replacing trinicon tube.

Adjusting Procedure:

1) Remove the socket of trinicon tube.
2) Attach 2.2Ω standard resistor and digital voltmeter as shown below.
3) Turn RV703 so as to adjust the voltage to 682 ±6mV.

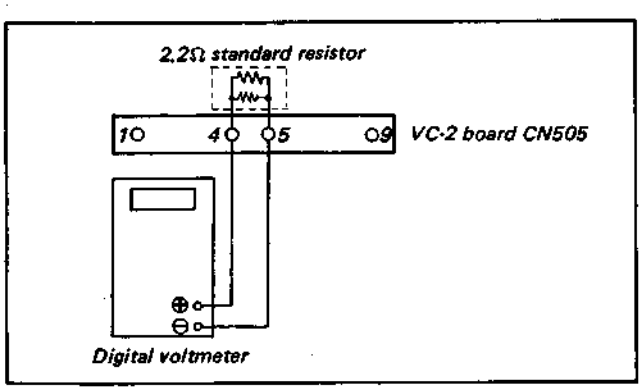


Fig. 2-1

2-2. ADJUSTMENT OF DEFLECTION SYSTEM

2-2-1. H Balance Adjustment

Oscilloscope: CH-1: TP702, CH-2: TP703 } ADD mode
Note: Oscilloscope range 2V/DIV

Adjusting Procedure:

1) Cover lens with a black cap.
2) Turn and adjust RV708 so as to make the waveform parabolic as shown below.

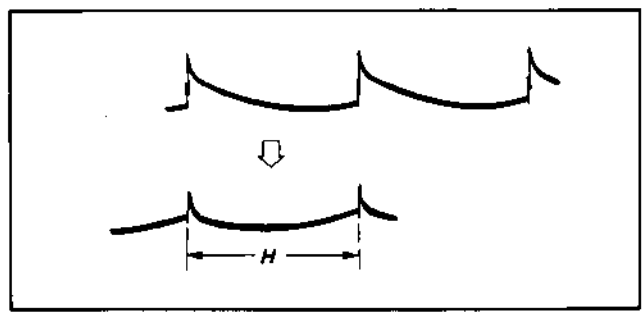

Fig. 2-2

2-2-2. Adjustment of V Balance

Oscilloscope: CH-1: TP704, CH-2: TP705 } ADD mode
Note: Oscilloscope range 2V/DIV

Adjusting Procedure:

Turn and adjust RV711 so as to make the waveform straight as shown below.

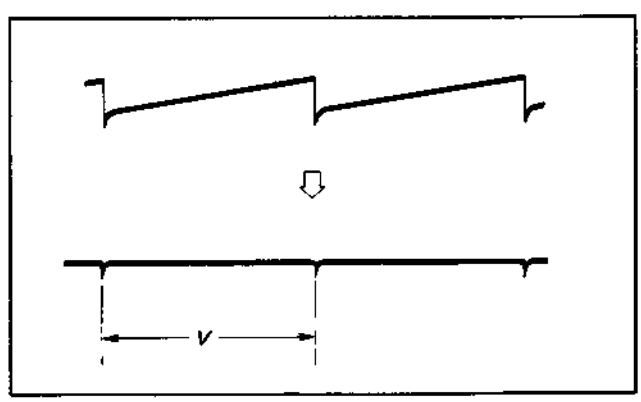

Fig. 2-3

2-2-3. Target Voltage Adjustment

Adjusting Procedure:

1) Connect ⊕ probe of digital voltmeter to TP701 and ⊖ probe to TP515 respectively.
2) Turn RV706 and adjust voltage to 49 ± 2V.

Note: Turn RV706 little by little clockwise starting from its utmost end on the printed face of the board.

2-2-4. Bias Light Adjustment

Oscilloscope: TP501

Adjusting Procedure:

1) Cover lens with a black cap.
2) Adjust the level to 20 ± 8mVp-p using RV705 as shown below.

Note: Temporarily adjust beam prior to the bias light adjustment.

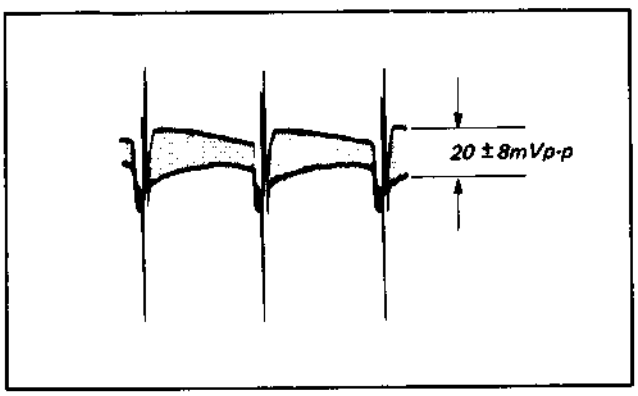

Fig. 2-4

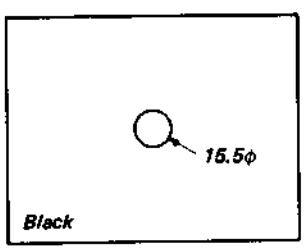
2-2-5. x2 Beam Adjustment

Oscilloscope: TP501

Object to be shot: High brightness pattern (shown below).



Adjusting Procedure:

1) Turn RV702 fully counterclockwise and RV704 fully clockwise on the printed face.
2) Cover lens with ND-0.4 filter.
3) Set zoom lever to the utmost telephoto end.
4) Adjust output waveform to 480 ± 50mV using RV702.

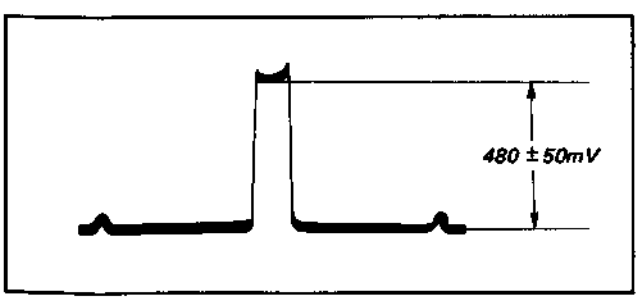


Fig. 2-5

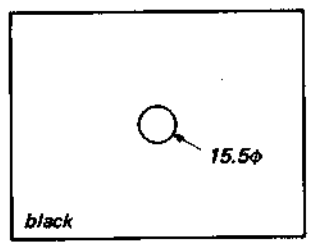
2-2-6. x5 Beam Adjustment (ABO)

Oscilloscope: TP501

Object to be shot: High brightness pattern (shown below).



Adjusting Procedure:

1) Set zoom lever to the utmost telephoto end.
2) Turn RV704 counterclockwise on the printed face and adjust the peak-to-peak value of the waveform shown in Fig. 2-6 to 1.2 ± 0.1Vp-p.

Note: Make this adjustment more than 1 minute after turning power on.

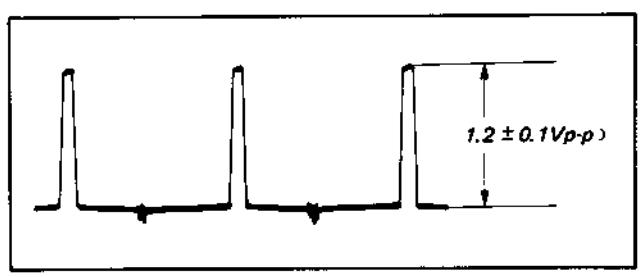


Fig. 2-6

2-2-7. Focus Adjustment

Oscilloscope: TP501

Object to be shot: Fully white pattern

Adjusting Procedure:

1) After shooting the white pattern fully on the picture frame, cover the lens with a red filter.
2) Turn RV701 so as to make the carrier component of the waveform shown below maximum.

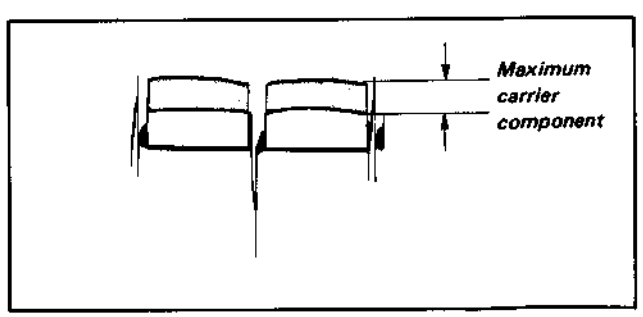

Fig. 2-7

2-2-8. H Size Adjustment

Connect 5.4MHz oscillator jig as shown below.

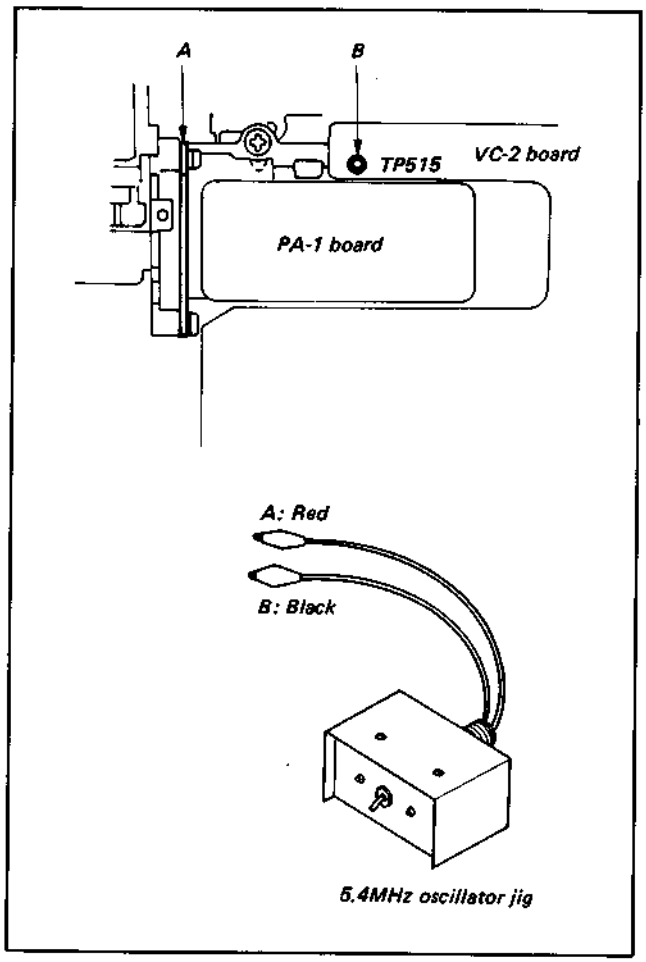

Fig. 2-8

Adjusting Procedure:

1) Cover the lens with a white cap.
2) While observing the color monitor, adjust RV707 so as to make the number of beats the smallest laterally as shown below, and confirm that the number of beats is less than 6.7.

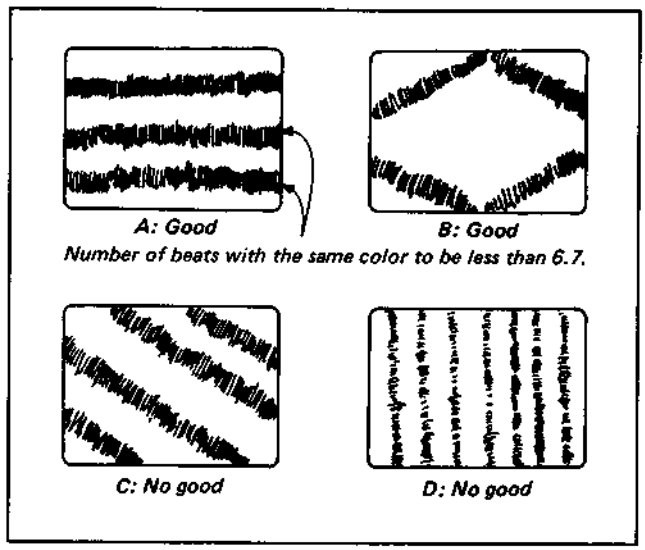

Fig. 2-9

2-2-9. H Centering Adjustment

Oscilloscope: CH-1: TP501
CH-2: TP511

Object to be shot: Fully white pattern

Adjusting Procedure:

Turn RV-709 fully counterclockwise first on the pattern face and then gradually turn it clockwise so as to make the width of black mask of waveform shown in Fig. 2-10 equal to 2.9 ± 0.4μsec from the rise of HD pulse shown below.

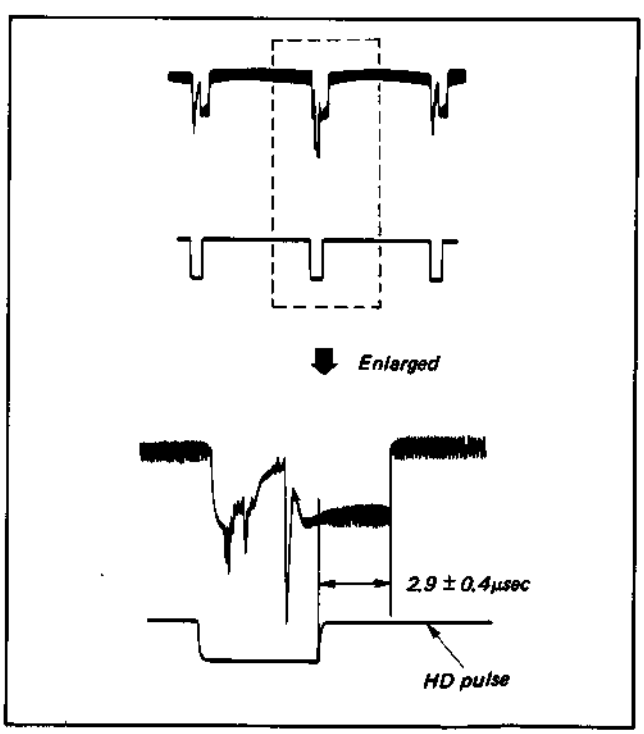

Fig. 2-10

2-2-10. Adjustment of Levelness

1) Place the camera and object in level, and focus the lens on the object.

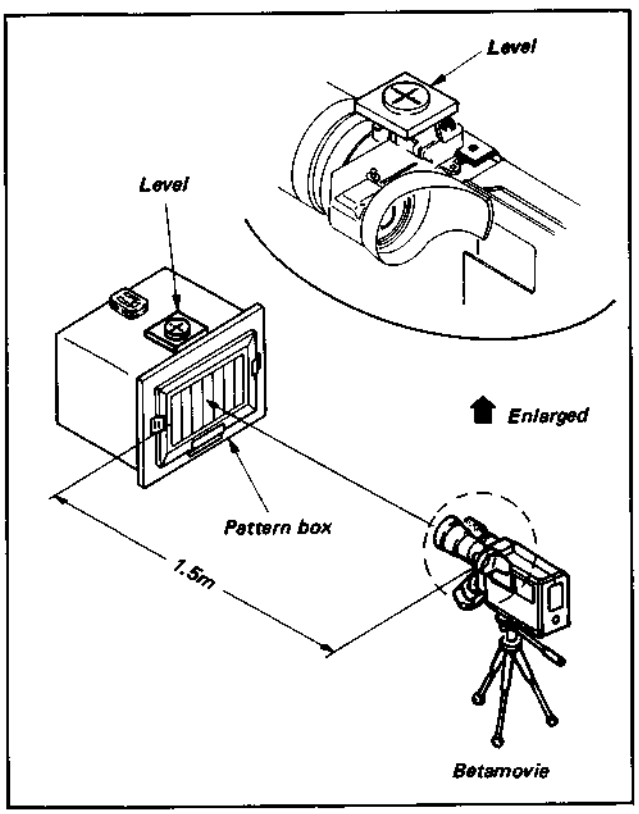

Fig. 2-11

2) Loosen the clamp screw of Trinicon tube with a hexagon key wrench, and turn level adjusting pin with a regular screwdriver so as to make the Trinicon tube level.

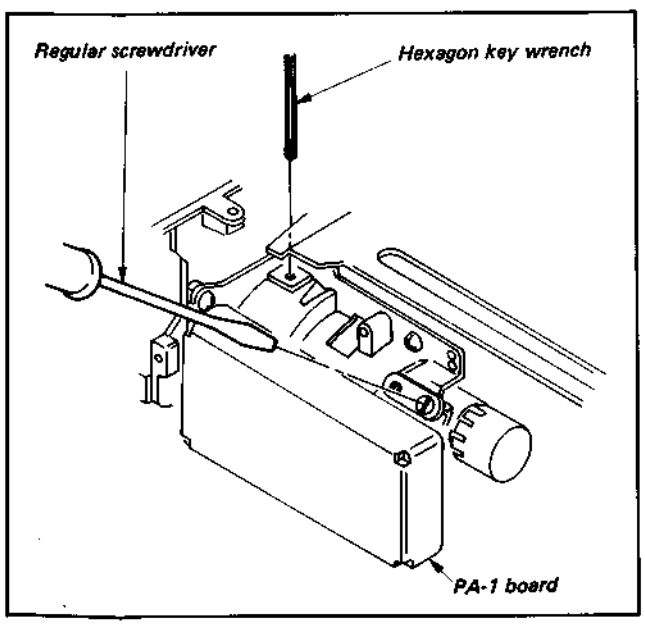

Fig. 2-12

2-2-11. Flange Back Adjustment (F. B.)

Adjusting Procedure:

1) Set the focus ring of lens to 1.5m.
2) Set zoom ring to a wide angle end of 9mm.
3) Loosen lens lock screw A.
4) Slightly rotate lens with a screwdriver having a narrow blade from C-portion.
5) Adjust the adjust screw of B-portion so as to make the clearest at the center of monitor.
6) Tighten the lens lock screw A.
7) When the focus ring is rotated to make the center the clearest, the position of the focus ring must be within the standard range.
8) If the step 7 fails, repeat steps 3 to 6.

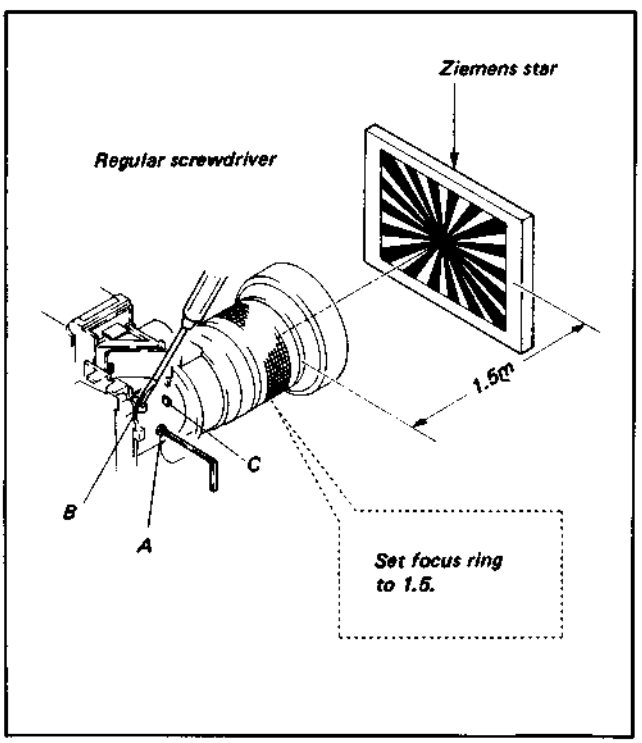

Fig. 2-13

Note: Start adjustment only after moving the zoom lever back and forth more than once between wide angle end and telephoto end.

Standard range of step 7: 1.2 | 1.5 | 2

2-2-12. Confirmation of Horizontal Optical Axis with OVF

Object to be shot: Color pattern

Adjusting Procedure:

1) Set the zoom lever to the telephoto end.
2) Adjust the universal head so as to align the pattern box center with monitor center.
3) Adjust the adjust screw so as to align the finder with pattern box center.

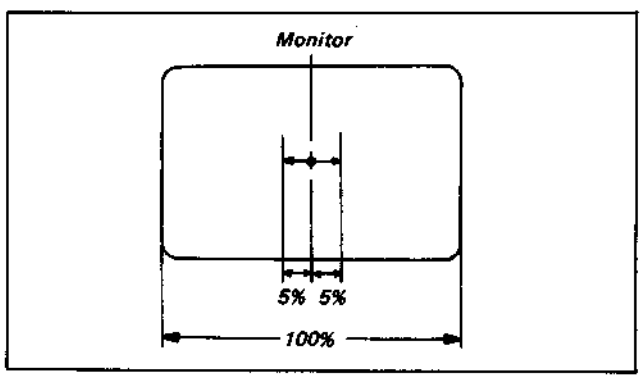

Fig. 2-14

Standard:

When the finder center is aligned with pattern box center, the deviation on the monitor must be within ±5%.

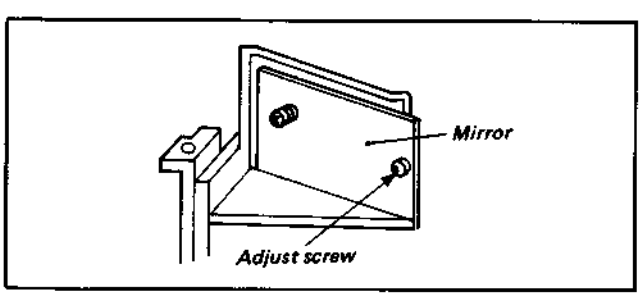

Fig. 2-15

2-2-13. V Size Adjustment

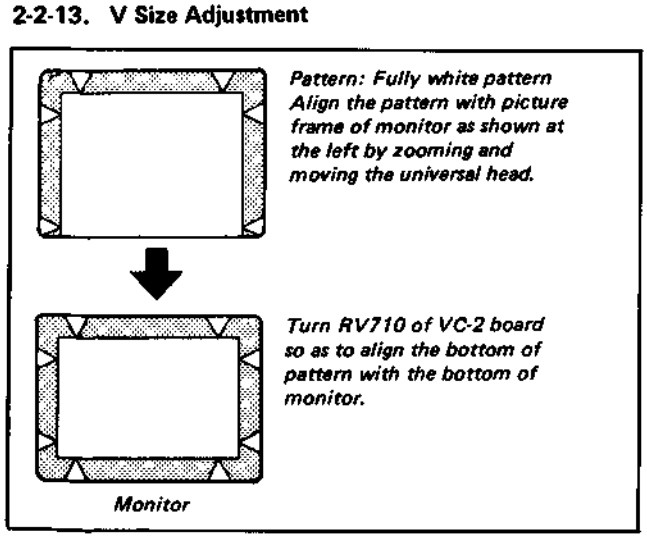

Fig. 2-16

2-2-14. Adjustment of V Centering

Show marks to the centers of white pattern and monitor screen. Set the zoom lever to telephoto and focus the lens.

Adjusting Procedure:

1) Align the center of pattern with the center of lens by moving the universal head, set the zoom to wide angle, and align the center of screen to the center of white pattern.
2) If the center of screen is deviated from the center of white pattern after setting the zoom to telephoto, then deviate the center of fully white pattern by one-fifth of center-to-center distance A in the direction of deviation by adjusting RV712.
3) After setting the zoom to wide angle, align the center of fully white pattern with the center of lens by moving the universal head, and align the center of the pattern with the center of screen.
4) Set the zoom to telephoto, and confirm that the deviation between the center of screen and the center of white pattern is less than 1/25 of screen length ℓ.

Note: If the deviation is not less than 1/25 of ℓ, then repeat the adjustment again.

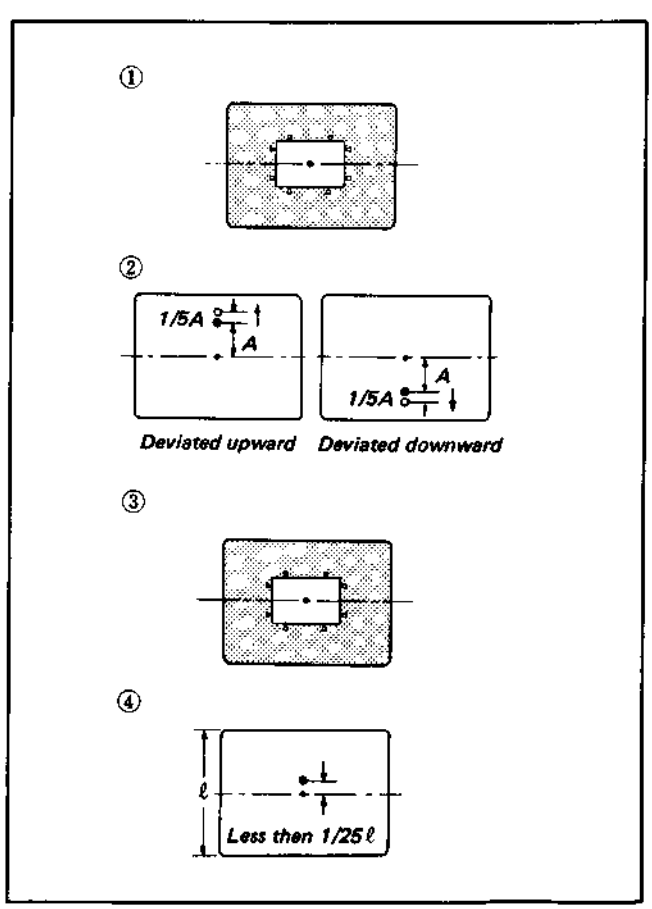

Fig. 2-17

2-3. ADJUSTMENT OF Y SYSTEM

2-3-1. Adjustment of Iris Weighting

Oscilloscope: TP504

Adjusting Procedure:

1) Cover the lens with a black cap.
2) Turn RV524 so as to align the point where the voltage is 100mV lower than the fully voltage value with the point of 4.6 ± 0.2mS as shown in Fig. 2-18.

Note: LLA in the finder must have been turned on.

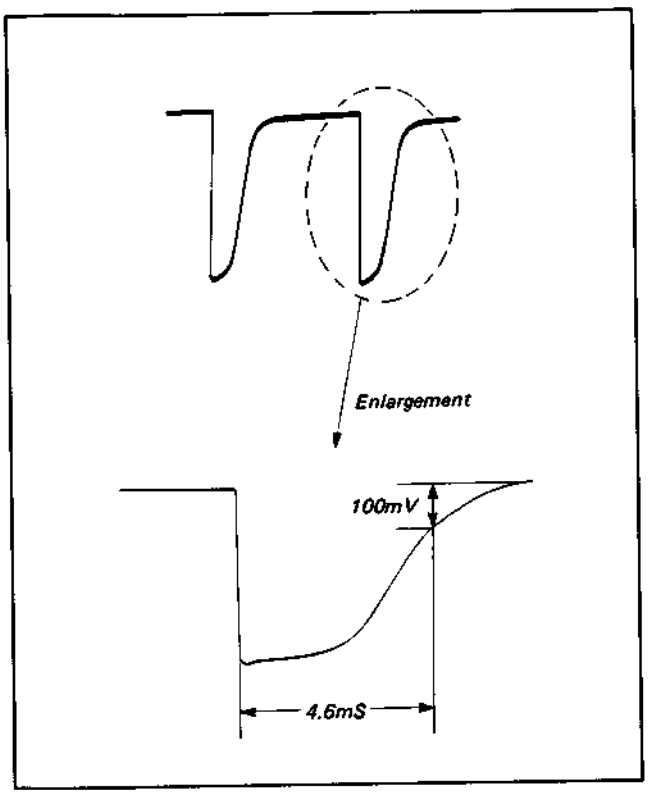

Fig. 2-18

2-3-2. Adjustment of Auto Iris

Oscilloscope: TP501

Object to be shot: Color pattern

Adjusting Procedure:

Turn RV523 so as to make the peak-to-peak value of waveform of Fig. 2-19 equal to 240 ± 30mVp-p.

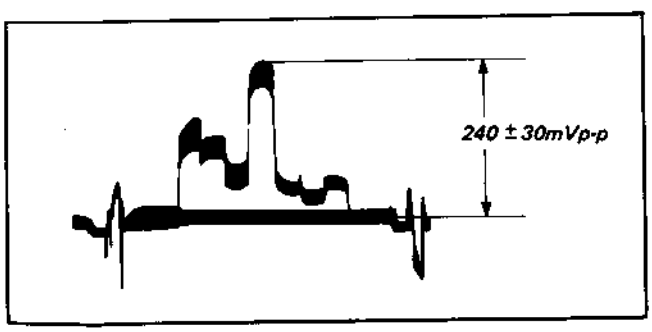

Fig. 2-19

2-3-3. Adjustment of Dark Clip

Oscilloscope: TP502, AC mode

Adjusting Procedure:

1) Cover the lens with a black cap.
2) Turn RV501 so as to make the clamped portion during blanking equal to 0V.

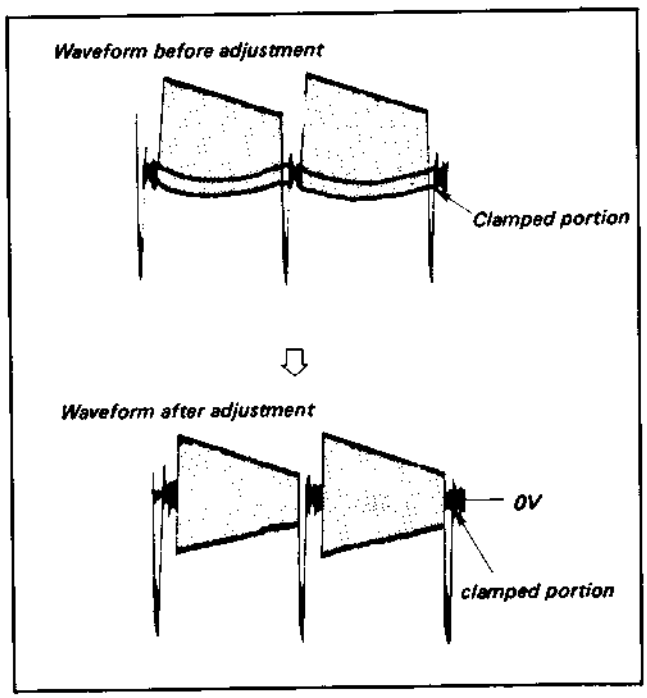

Fig. 2-20

2-3-4. Adjustment of AGC Weighting

Oscilloscope: TP503

Adjusting Procedure:

1) Cover the lens with a black cap.
2) Turn RV525 of VC-2 board so as to align the point where the voltage is 200mV lower than the full voltage value with the point of 4.6±0.2mS as shown below. (Fig. 2-21)

Note: LLA in the finder must have been turned on.

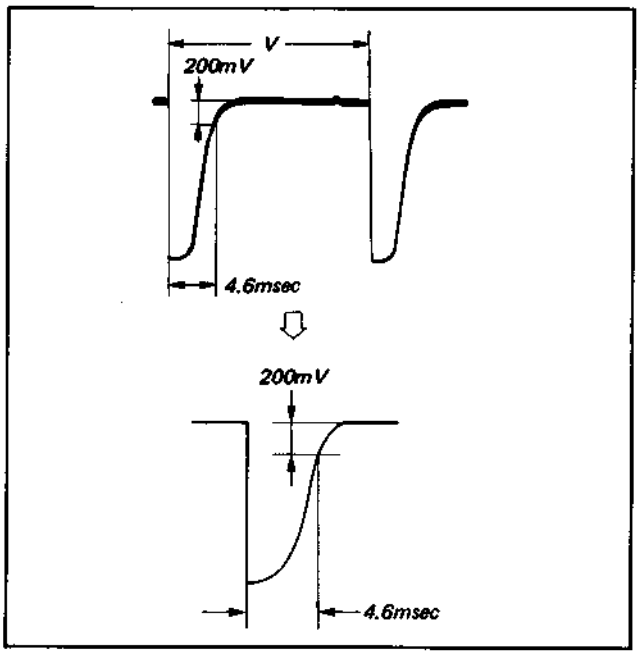

Fig. 2-21

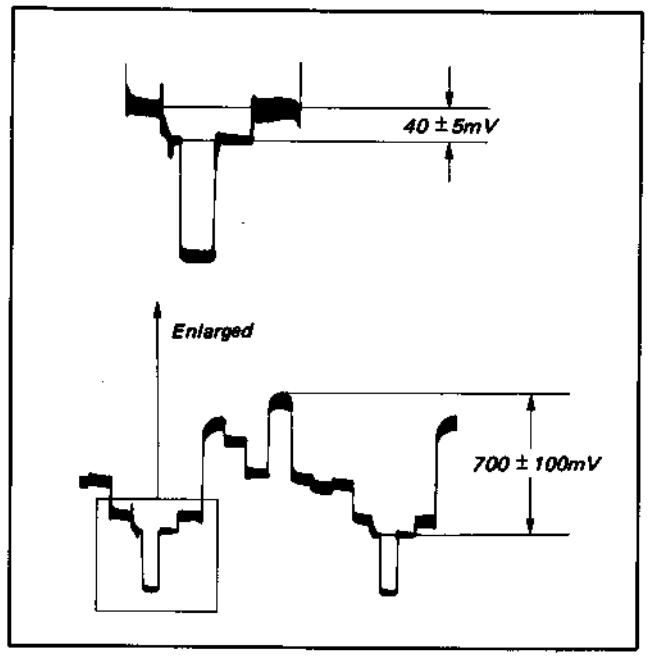

Fig. 2-23

2-3-5. Adjustment of AGC Level

Oscilloscope: TP502

Object to be shot: Color pattern

Adjusting Procedure:

Turn RV504 so as to make the peak-to-peak value of waveform shown below equal to 1.5 ± 0.2V.

Note: This value should be observed 3 to 4 seconds after the adjustment.

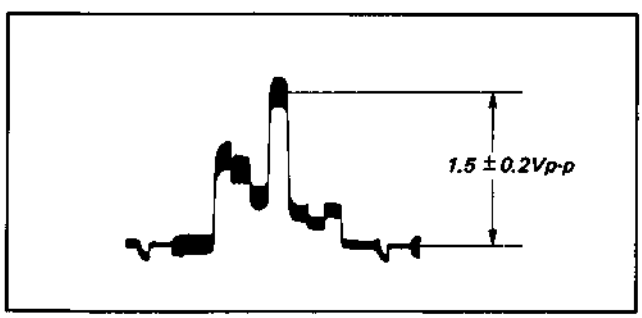

Fig. 2-22

2-3-6. Adjustment of Y Pedestal and Y Level

Oscilloscope: TP506

Object to be shot: Color pattern

Adjusting Procedure:

1) Turn RV505 so as to make the pedestal level equal to 40 ± 5mV as shown below.
2) Turn RV506 so as to make Y level equal to 700 ± 100mV as shown below.
3) Check the pedestal again and confirm that it is within the standard range.
4) If the pedestal is not within the standard range, readjust RV505 and RV506 and repeat the steps 1 and 2.

2-3-7. Adjustment of Base Noise Clip

Oscilloscope: TP505

Object to be shot: Color pattern

Adjusting Procedure:

Turn RV507 so as to make level equal to 10 ± 5mV as shown below.

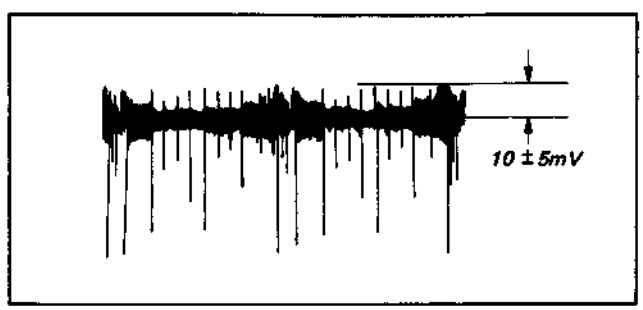

Fig. 2-24

2-3-8. Knee Adjustment

Oscilloscope: TP506

Object to be shot: High brightness pattern (shown below)

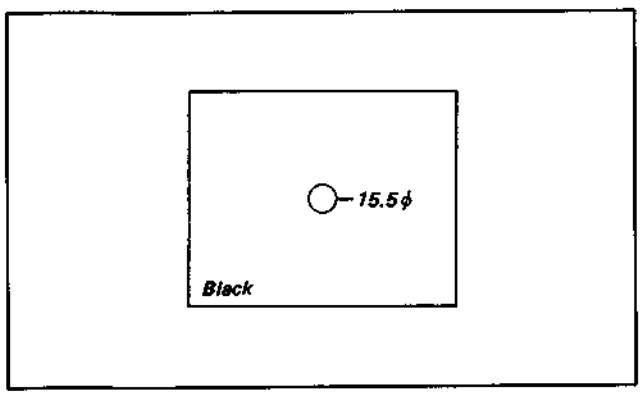

Fig. 2-25

Adjusting Procedure:

1) Set the zoom to telephoto end.
2) Turn RV502 so as to make the value of waveform of Fig. 2-26 equal to 900 ± 100mV.

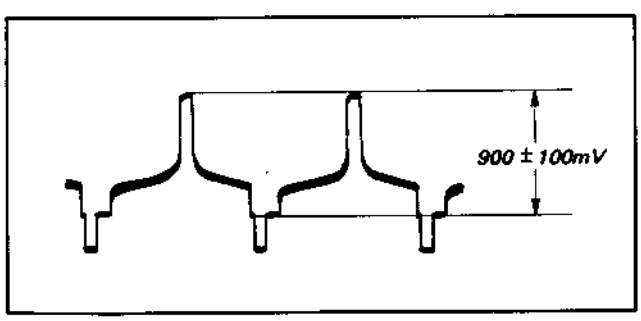

Fig. 2-26

2-3-9. LLA Adjustment

Object to be shot: Color pattern

Adjusting Procedure:

1) Cover the lens with ND filters 0.4 and 1.0 and adjust RV522 on VC-1 board so as to turn on LLA lamp.
2) Remove ND filters 0.4 and 1.0 from the front of lens.
3) Cover the lens with ND filters 0.1 and 1.0 and confirm that the LLA lamp will be turned off. If it does not, adjust RV522 so as to turn off LLA lamp.
4) Repeat steps 1 and 3 once again for confirming the adjustment.

2-4. ADJUSTMENT OF CHROMA SYSTEM

2-4-1. Adjustment of Burst Level

Oscilloscope: TP514

Adjusting Procedure:

1) Cover the lens with a black cap.
2) Turn RV521 so as to make the burst level equal to 280 ± 10mV as shown below.

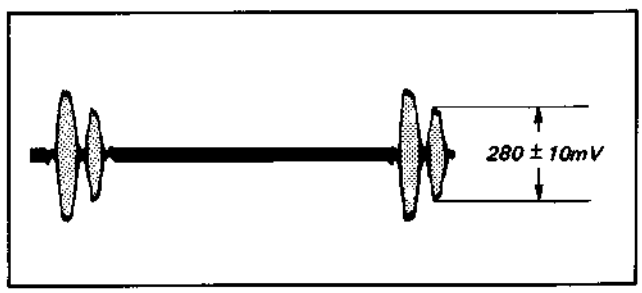

Fig. 2-27

2-4-2. Adjustment of HV Phase Correction

Oscilloscope: CH-1: TP509, CH-2: TP508 } X-Y mode

Object to be shot: White pattern

Adjusting Procedure:

1) Shoot the white pattern with 5% cut.

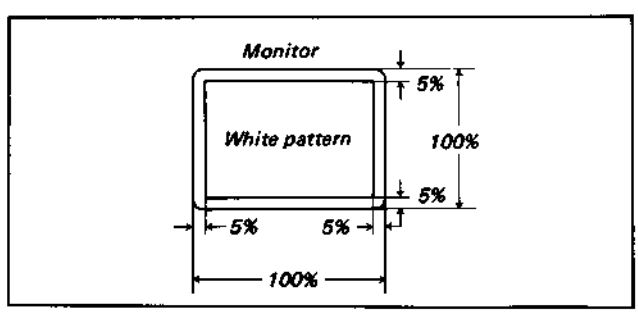

Fig. 2-28

2) Cover with a red filter.
3) Adjust with RV511 and RV512 so as to make the size of spot minimum. (Fig. 2-29)

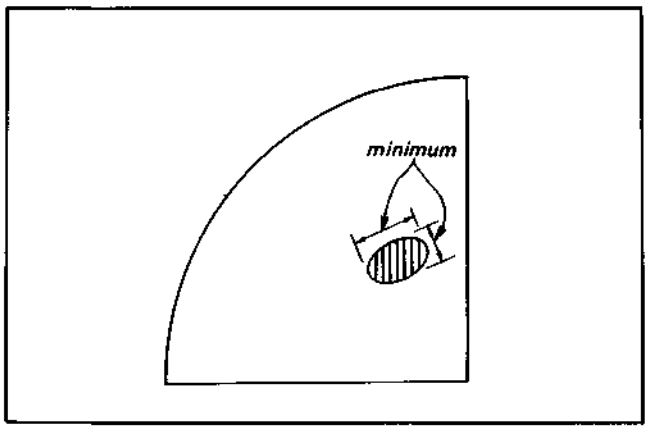

Fig. 2-29

2-4-3. Adjustment of Chroma Index Separation

Oscilloscope: CH-1: TP509 / CH-2: TP508 } X-Y mode

Object to be shot: Color pattern

Adjusting Procedure:

Adjust with RV509 and L504 alternately to overlap spots as many as possible.

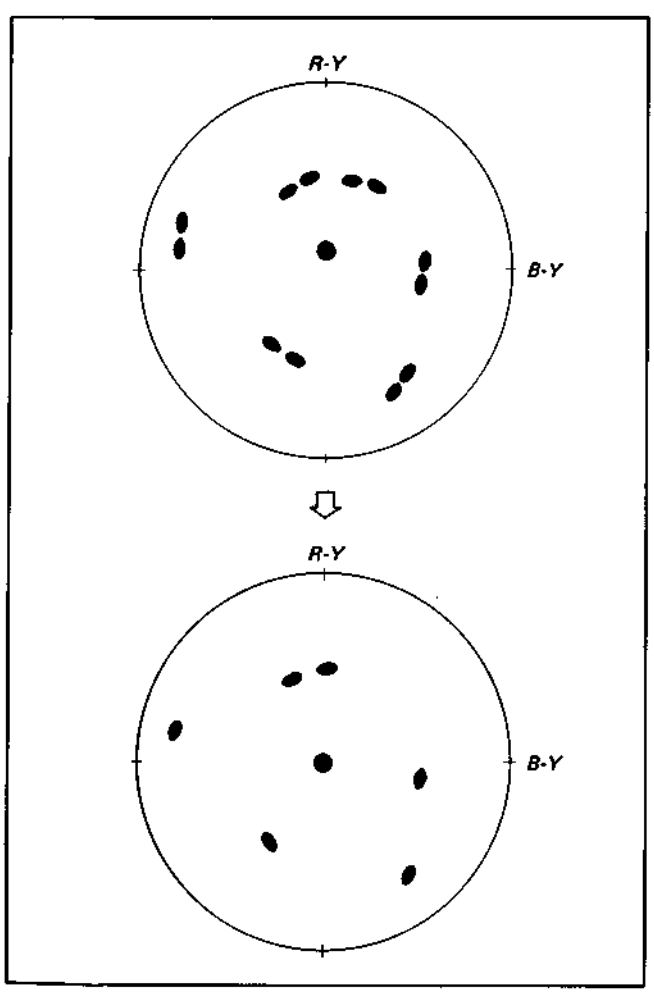

Fig. 2-30

2-4-4. Adjustment of Chroma Compression

Oscilloscope: TP510

Object to be shot: Color pattern

Adjusting Procedure:

1) Set filter selector to ☼ (indoor), and depress the white balance button to turn off W in the finder.
2) Cover the lens with a black cap.
3) Turn RV503 so as to make the output equal to 450 ± 30mV in DC level.
4) Confirm the color reproducibility.

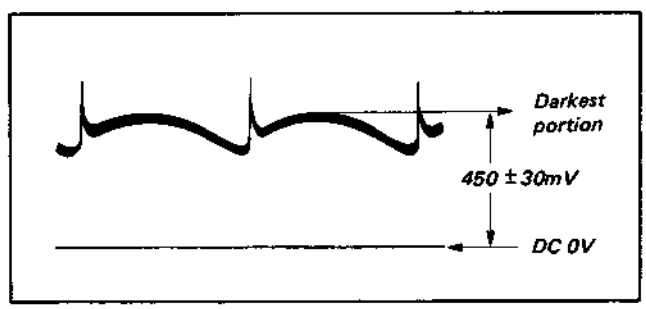

Fig. 2-31

2-4-5. Auto White Balance

Oscilloscope: CH-1: TP509 / CH-2: TP508 } X-Y mode

Object to be shot: White pattern

Adjusting Procedure:

1) Set filter switch to ☼ (indoor).
2) Adjust with RV516 and RV517 so as to let the spot become the origin when white balance button is depressed.

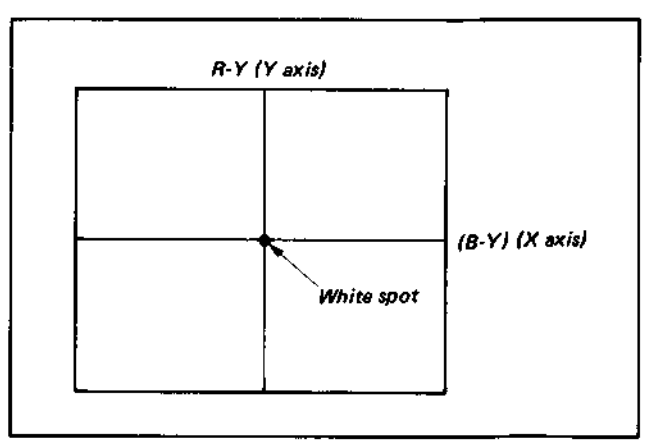

Fig. 2-32

3) Confirm that "W" in the view finder is turned off.
4) Confirm that the spot will deviate when the filter switch is switched to ✷ (outdoor).

2-4-6. Adjustment of Color Reproducibility

1. Adjustment of Chroma Level Phase

1) Oscilloscope: CH-1: TP509, CH-2: TP508 } X-Y mode
   Cover with a black cap.
2) Connect the red clip of 5.4MHz oscillator jig to TP501 and the black clip to TP515.
3) Make the shape as round as possible by adjusting with RV515 and RV526.

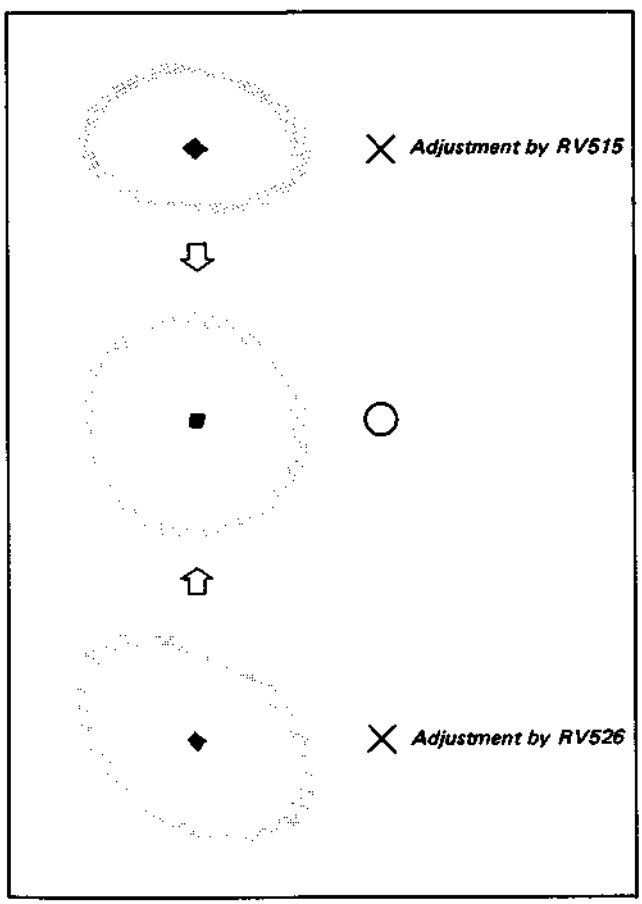

Fig. 2-33

4) Remove the black cap.
5) Oscilloscope: TP514
   Adjust RV508 to bring the larger of red levels A and B to 150 ± 10mV.

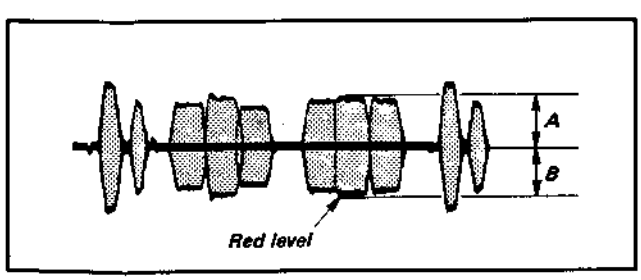

Fig. 2-34

2. Adjustment of Carrier Balance

Oscilloscope: TP514

Object to be shot: Color pattern

Adjusting Procedure:

Adjust with RV518 and RV519 so as to make the carrier component minimum.

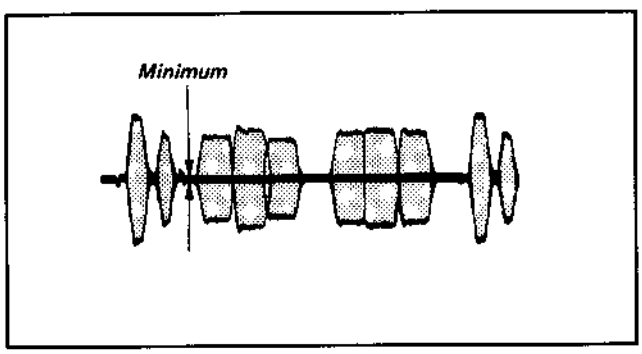

Fig. 2-35

3. HUE Adjustment

Oscilloscope: CH-1: TP509, CH-2: TP508 } X-Y mode

Adjusting Procedure:

Adjust with RV510 so as to have the red spots located within the standard phase frame.

4. Adjustment of White Balance

Oscilloscope : CH-1 : TP509, CH-2 : TP508 } X-Y mode

Object to be shot: Color pattern

Adjusting Procedure:

1) Adjust with RV513 and RV514 so as to let the white spot become the origin. (Fig. 2-36)

Note: Switch the filter switch from ☼ (indoor) to ☀ (outdoor) and to ☼ and adjust the white balance while "W" is lighted.

2) Confirm that all color spots located within the standard phase frame.
3) If the above step 2) is not satisfied, repeat above steps **3** through **4**.

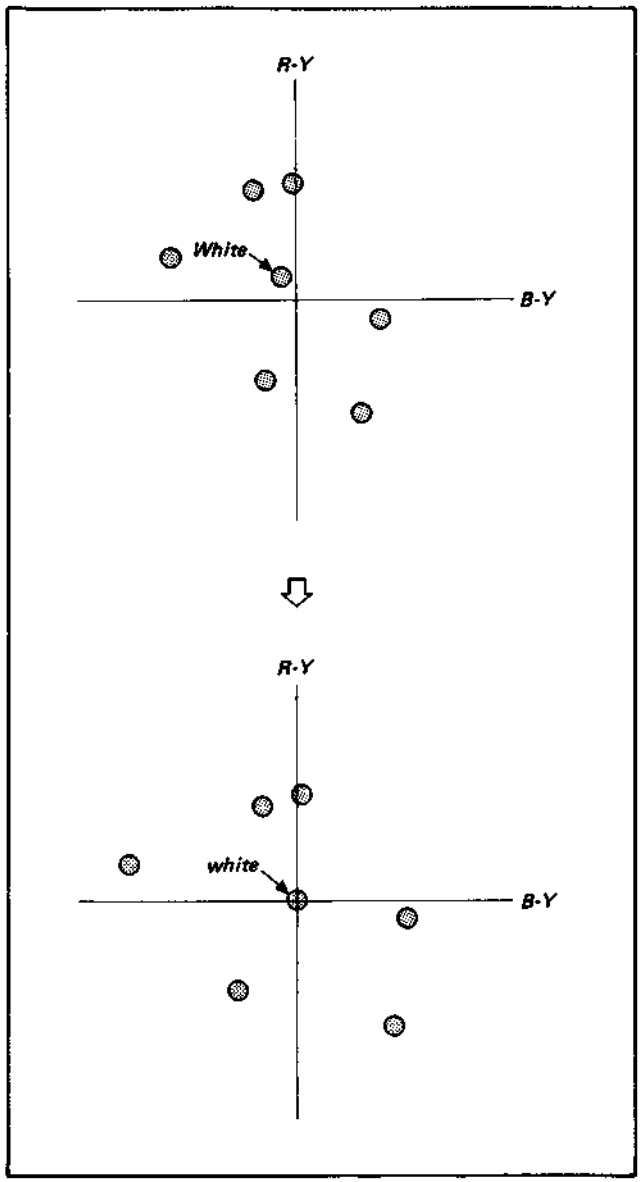

Fig. 2-36

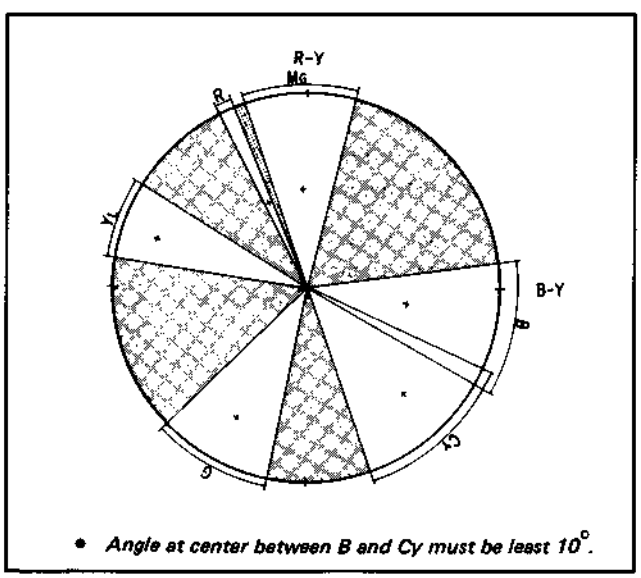

Fig. 2-37 Standard phase frame

2-4-7. PLL Adjustment (GC-3 Board)

Oscilloscope: CH-1, Point A (VC-2 Board)
External SYNC: TP511 (HD pulse)

Adjustment Procedure:

1) Short pins ① and ② of IC651 (GC-3 board) together.
2) Disconnect points A and B on VC-2 board by unsoldering. (Fig. 2-38)

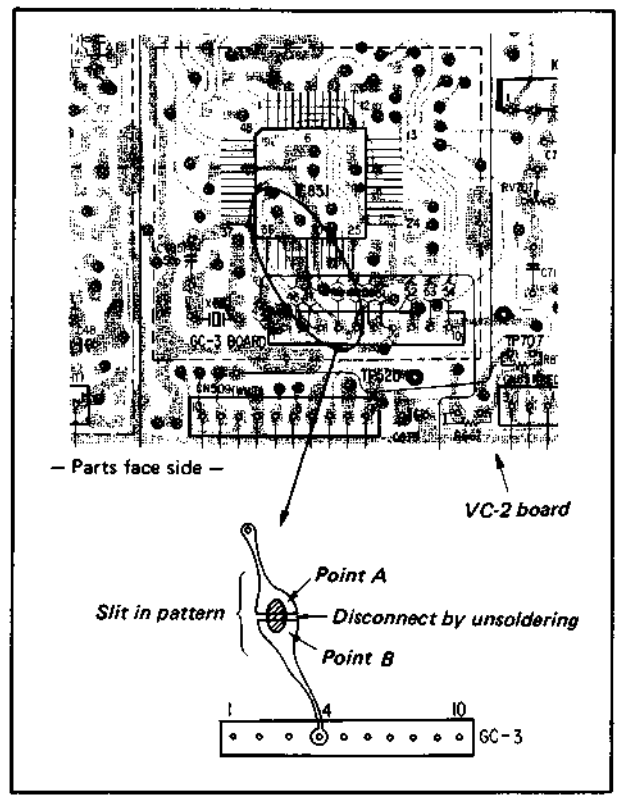

Fig. 2-38

3) Adjust CT651 to minimize fluctuation of beats. (Fig. 2-39)

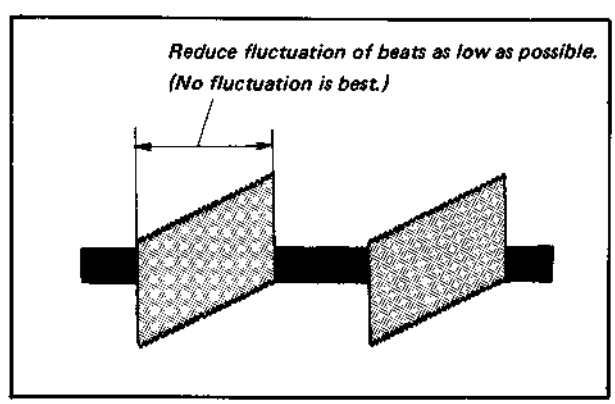

Fig. 2-39

4) Join points A and B by soldering, and disconnect pins ① and ② of IC651.
5) Check that the voltage at point A is 1.75V with a digital voltmeter.
6) If requirement 5) is not met, repeat 1) through 5).

SECTION 3
ALIGNMENT OF MECHANICAL COMPONENTS (VIDEO SECTION)

3-1. PREPARATION FOR CHECKING, ALIGNMENT, AND REPLACEMENT OF MECHANICAL COMPONENTS

3-1-1. Removal of Cabinet

1) Remove the three screws ❶ , and remove the lens cabinet, right ❷ .
2) Remove the three screws ❸ , and remove the lens cabinet, left ❹ .
3) While opening the lens cabinet (T) ass'y ❺ in the direction of the arrow ⓐ , remove it in the direction of the arrow ⓑ .
4) Remove the ACC shoe stopper screw ❻ , and remove the ACC shoe leaf spring ❼ .
5) Remove the two screws ❽ , and remove the ACC shoe ❾ .
6) Remove the two face screws ❿ , and remove the cassette compartment lid ass'y ⓫ .
7) Remove the four screws ⓬ , and remove the cabinet, left ⓭ .
8) Remove the four screws ⓮ , and remove the cabinet, right ⓯ .

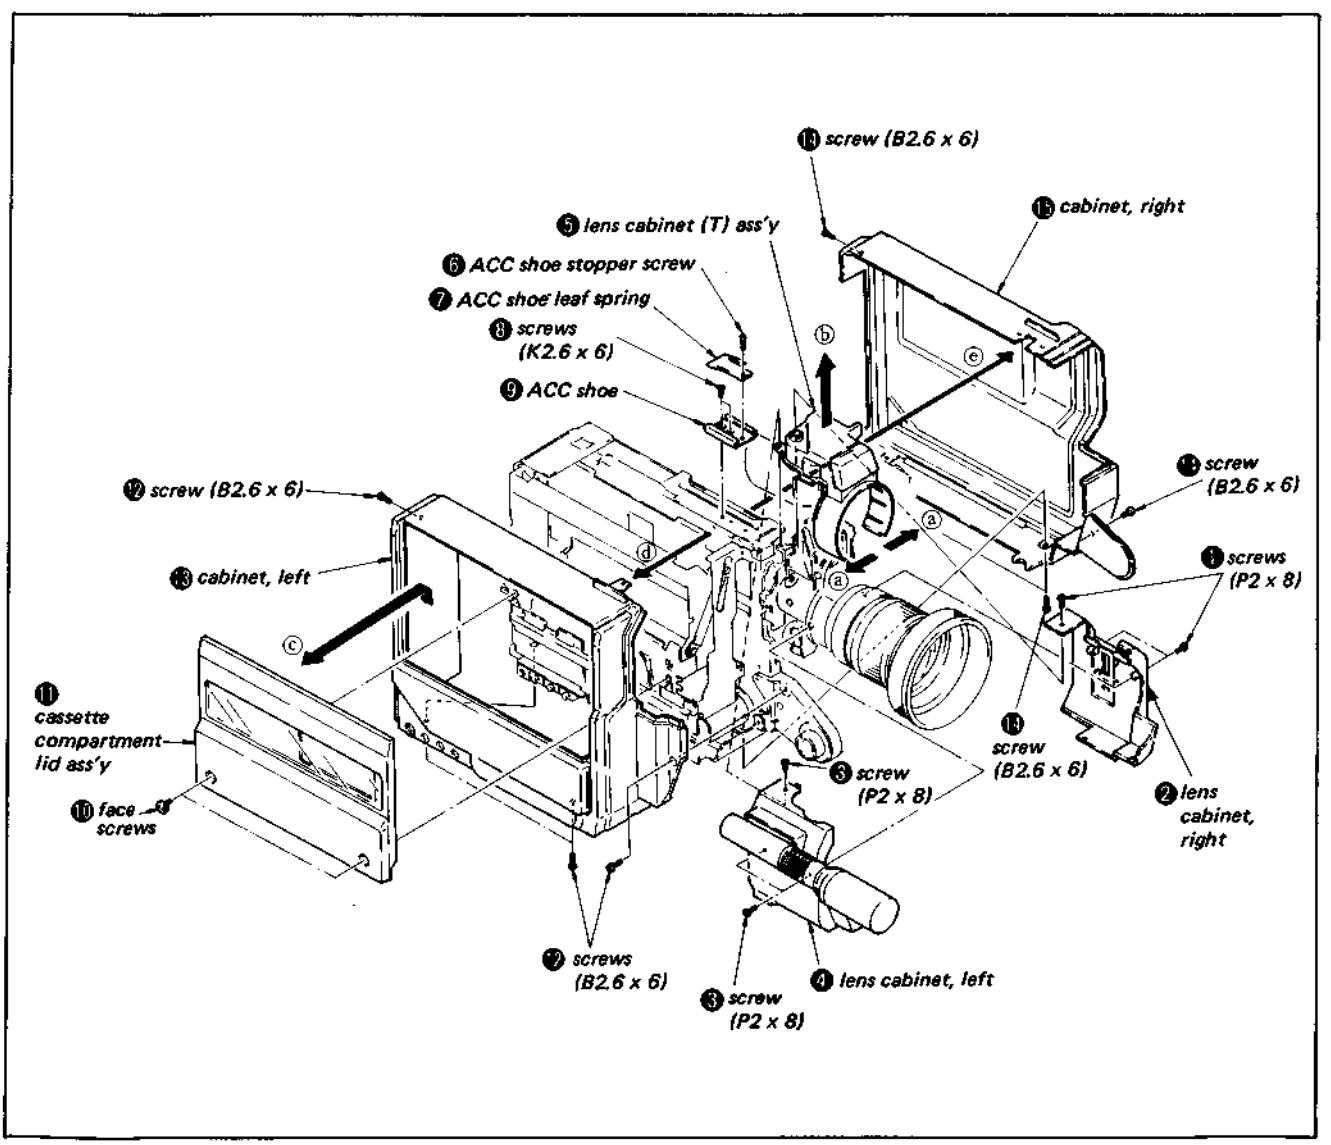

Fig. 3-1

3-1-2. Removal of Cassette Ass'y

1) Remove the screw ❶ .
2) Remove the four screws ❷ .
3) Turn down AU-3 and AU-4 boards in the direction of the arrow ⓐ .
4) Remove the cassette compartment ass'y ❸ .

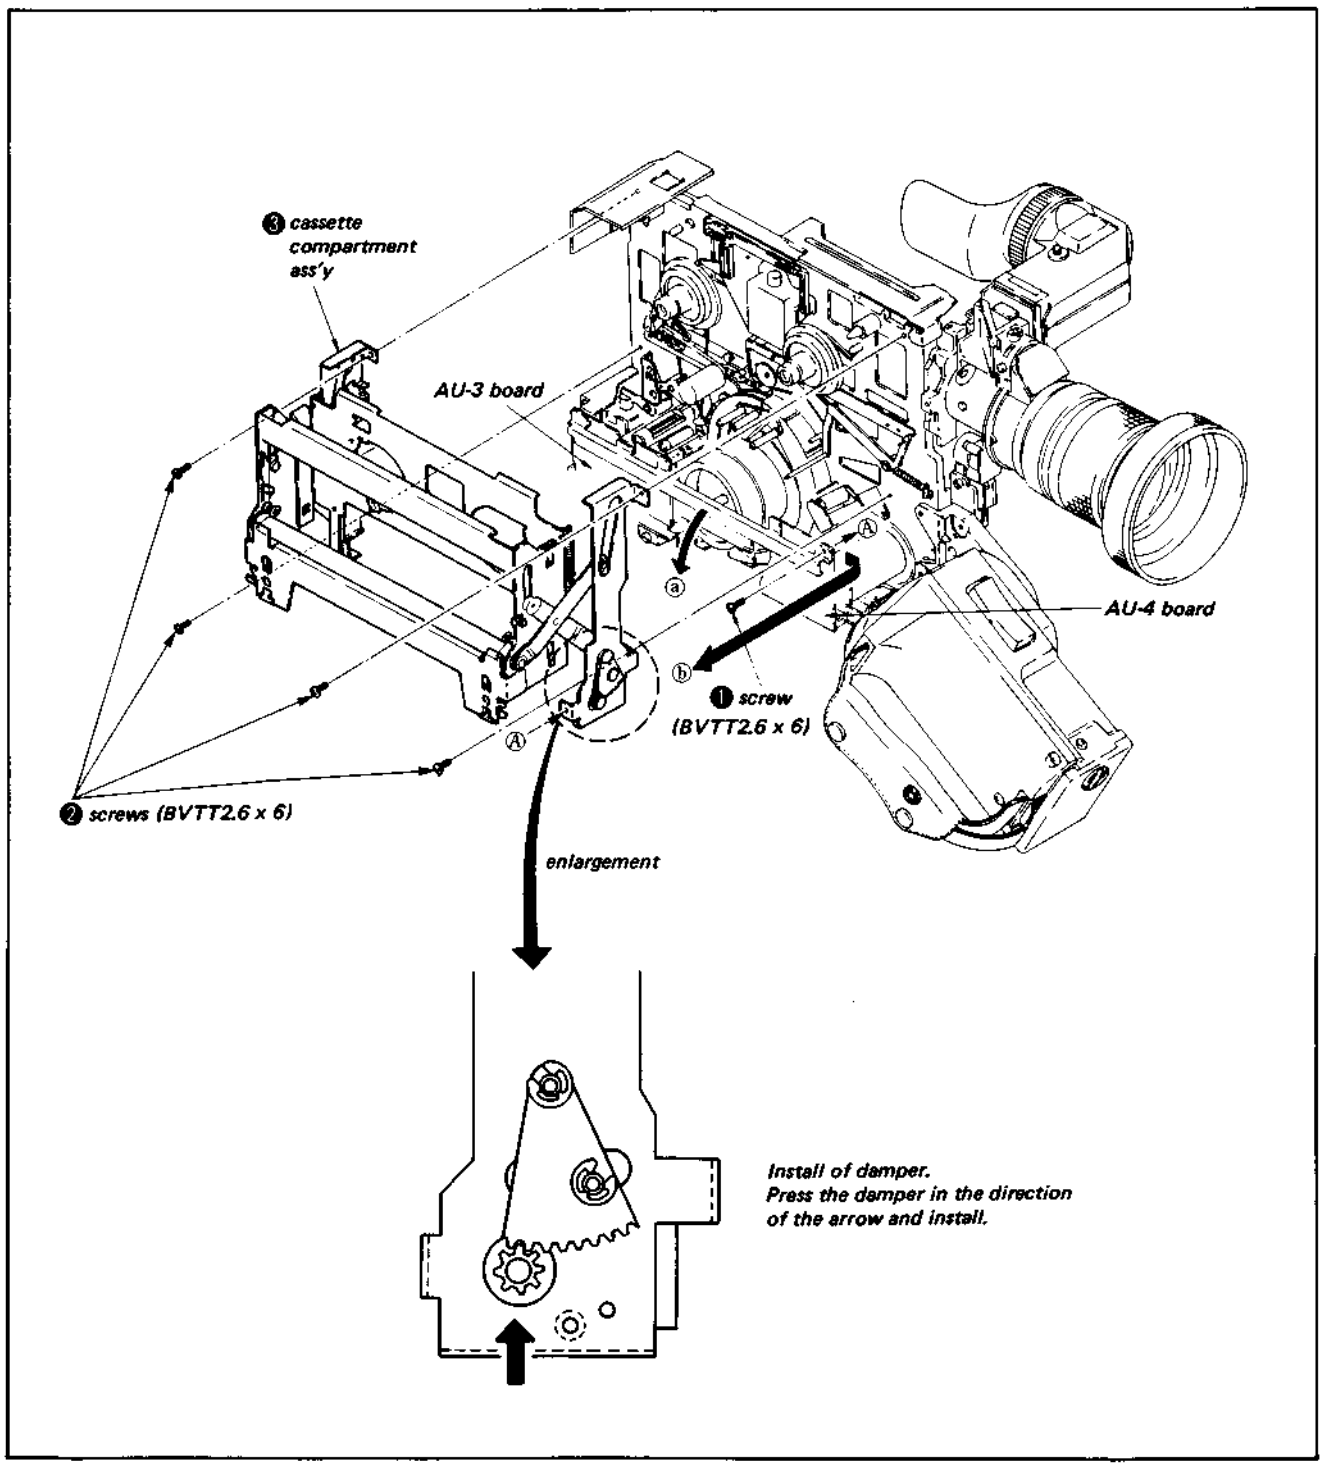

Fig. 3-2

3-1-3. Method of Opening VC-2, SS-17 and PA-1 Boards

1) Remove the two screws ❶.
2) Pull out the earth pin ❷.
3) Open the VC-2 board ❸.
4) Remove the screw ❹ and remove SW-28 board ❺.
5) Remove the three screws ❻, and open SS-17 board in the direction of the arrow ⓑ.
6) Remove the solder from the three soldered sections of PA-1 board ❽, and open in the direction of the arrow ⓒ.

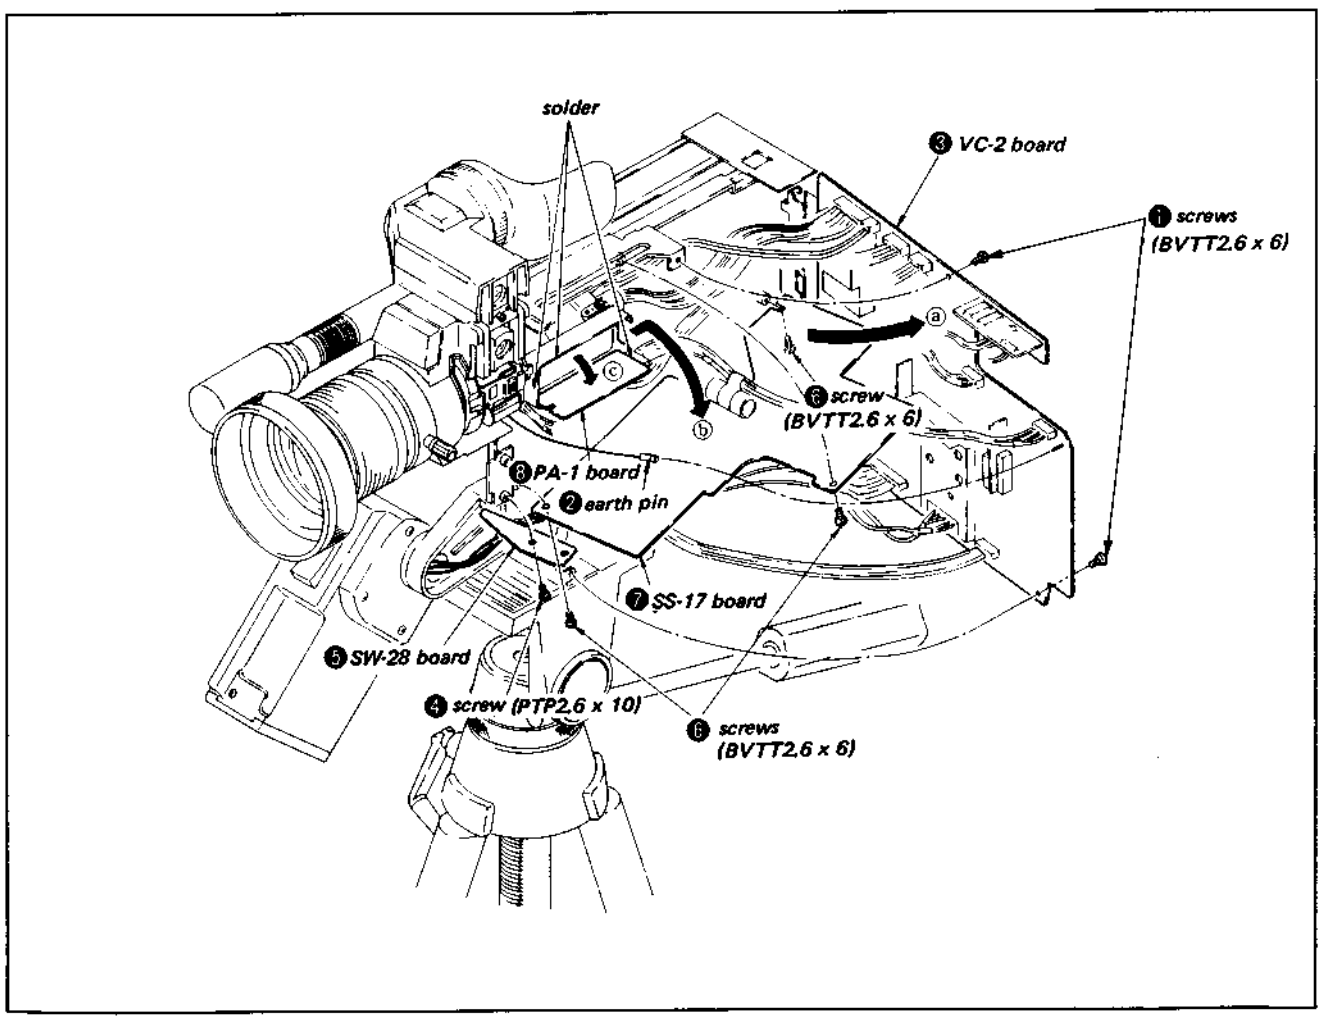

Fig. 3-3

3-2. PERIODIC CHECKS AND MAINTENANCE

The following routine inspections and maintenance procedures are recommended to assure proper functioning and performance of the set, and to extend the life of the machine and the tapes.

3-2-1. Maintenance After Servicing

After the set has been serviced, the following maintenance items must be carried out, regardless of the length of time that the set has been in use.

1. Upper Drum (Rotary Drum)

1) Clean the rotary drum using the cleaning piece (Ref. No. J6) soaked in cleaning fluid (Ref. No. J4). Press the cleaning piece lightly against the rotary drum while rotating the drum manually in the counterclockwise direction. (Never clean by rotating the drum under power, or in the clockwise direction. Clockwise rotation will cause the drum belt to come off or slip from the proper position, causing operating problems.)
2) Also, never clean the video head by moving the cleaning piece in the perpendicular direction. There is a strong possibility that such a procedure will damage the video head.

2. Cleaning the Tape Running System

1) Clean the tape guide, drum face, capstan shaft, and pinch roller using a cleaning piece soaked in cleaning fluid.

3. Cleaning the Drive System

1) Clean the drive section (belt, reel, other) using a cloth soaked in cleaning fluid.

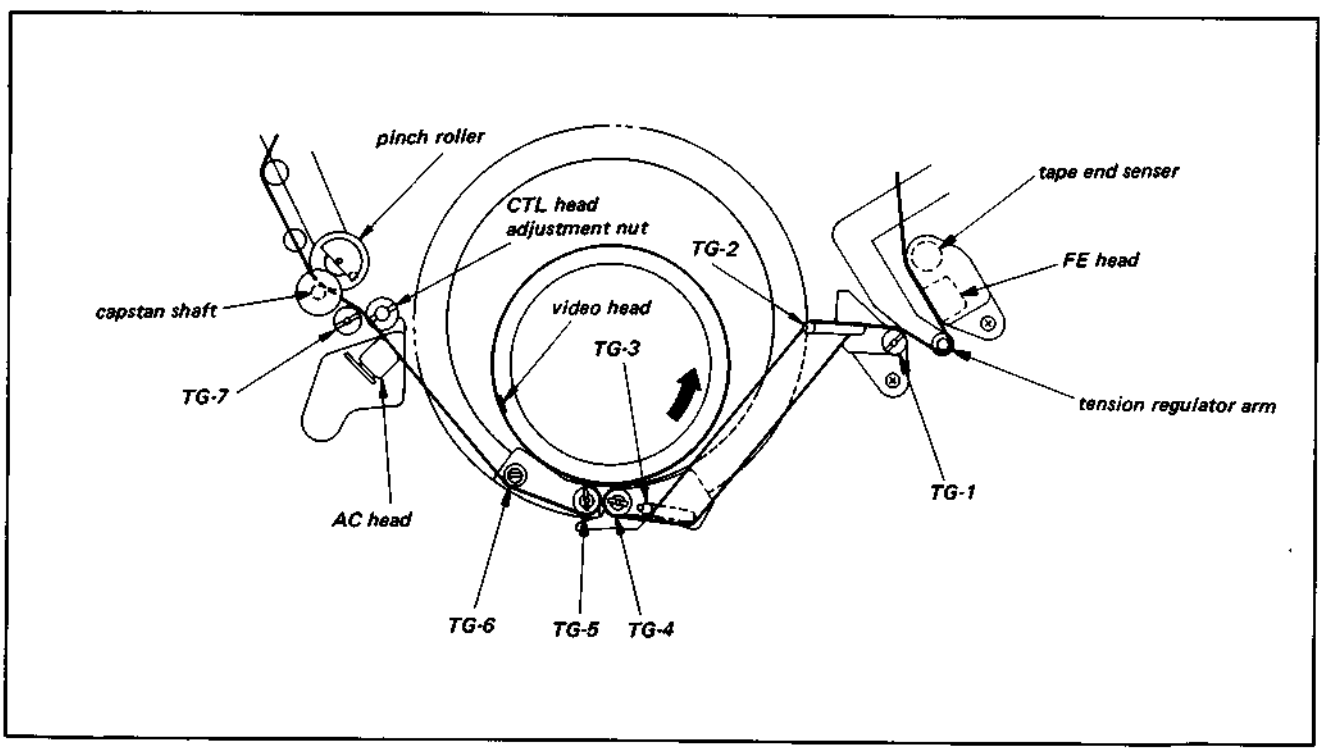

Fig. 3-4

3-2-2. Periodic Check Items

Carry out maintenance checks for the following items according to the length of time the unit has been in use.

○ : Cleaning, ◎ : Lubrication, ★ : Replacement, ☆ : Checking

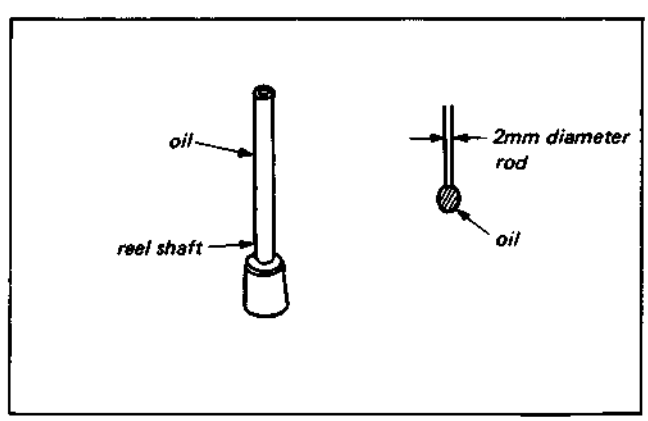
	Maintenance checks	Operating period (H) / Replacement Part No.	500	1,000	1,500	2,000	2,500	3,000	3,500	4,000	4,500	5,000	Remarks
Tape Running System	Cleaning of running surface of tape	———	○	○	○	○	○	○	○	○	○	○	These procedures must be carried out at each servicing. Use light pressure on the AC head as too much force can move it out of position
	Cleaning and degaussing AC head ass'y	A-6736-038-A	○	○	○	○	○	○	○	○	○	○	
	Cleaning and degaussing rotary drum	A-6762-154-A	○	○	○	○	○	○	○	○	○	○	The operating environment and method of use greatly affect the longevity of the video head.
	FE head	8-825-561-10	○	○	○	○	○	○	○	★	○	○	
Drive System	FWD belt	3-681-447-00	○	○	○	○	○	○	○	★	○	○	• These belts must be checked at each servicing. • Parts should be replaced at the operating intervals indicated, or every two years. • The tape speed should always be checked when replacing the capstan belt and the relay belt.
	Loading belt	3-681-424-00											
	Drum belt	3-681-446-00	○	○	★	○	○	★	○	○	★	○	
	Capstan belt	3-681-444-00											
	Relay belt	3-681-445-00											
	Cleaning iron core and opening of brake solenoid	1-454-357-11	–	–	–	○	–	–	–	○	–	–	
	Cleaning iron core and opening of pinch solenoid	1-454-357-21											
	Take-up reel	X-3681-404-0	–	☆	–	★	–	☆	–	★	–	☆	
	Capstan bearing	A-6735-050-A	–	◎	–	◎	–	◎	–	◎	–	◎	
	Drum motor	8-835-099-01	–	○	–	★	–	○	–	★	–	○	
Performance Checks	Abnormal sound	———	☆	☆	☆	☆	☆	☆	☆	☆	☆	☆	
	Measurement of back tension	———	–	☆	–	☆	–	☆	–	☆	–	☆	Standard is 35 to 40g (measured with SL-0011).
	Brake system	———	–	☆	–	☆	–	☆	–	☆	–	☆	Check edit function adjustment.
	Measurement of FWD torque	———	–	☆	–	☆	–	☆	–	☆	–	☆	Check using SL-0003C. Standard is 40 $^{+10}_{-14}$ g·cm
	Tape speed	3-682-740-00	☆	☆	☆	☆	☆	☆	☆	☆	☆	☆	Check tape speed adjustment. Replace midway pulley (P) as required.

Note 1: OVERHAUL

When overhauling the unit, replace the parts refering to the outline above. The loading motor is not included in the above and should be overhauled about every 20,000 operations.

Note 2: SONY Oil

* SONY oil should always be used. (If oil of a different viscosity is used the correct functioning of the unit cannot be assured.)
  SONY oil: Part No. 7-661-018-01
* Always use clean SONY oil to for lubricate the bearings. (Dirty oil can cause the bearings to overheat and be subjected to excessive wear.)
* The amount of oil to be applied is shown in the following diagram. One drop should be used at the tip of a 2mm diameter rod.



3-2-3. Summary of Servicing Tools

Ref. No.	Name	Cord No.	Fixture No.	Use, etc.
J1	Forward back tension measurement tape	J-6080-003-C	SL-0003C	FWD torque measurement
J2	Small adjustment mirror	J-6080-029-A J-6080-030-1	SL-5052	Tape pass adjustment and tape running system check
J3	Alignment tape	8-969-995-13	KR5-3C	Tracking and tape path adjustment
		8-969-995-52	KR5-2H	
J4	Cleaning fluid	Y-2031-001-0		
J5	Thickness gauge	9-911-053-00		Opening adjustment
J6	Cleaning piece	2-034-697-00		Cleaning all sections
J7	Head demagnetizer			Video, audio head degaussing
J8	Lapping tape	8-888-004-00		Video head cleaning
J9	Sector type gauge (for 50g)	7-732-050-20		FWD back tension measurement
J10	Reel table tension gauge	J-6080-011-A	SL-0011	FWD back tension measurement
J11	Driver, tape path	J-6080-811-A		Tape guide adjustment

3-3. REMOVAL AND ADJUSTMENT OF MECHANICAL PARTS

Handling Machinery with Cassette Compartment Ass'y Removed

[Threading Method]

1) Press the arm lock ❶ in the direction of arrow Ⓐ, and turn the microswitch ❷ ON.
2) Move the lock arm ❸ in the direction of the arrow Ⓑ.
3) Press the lock detection assebmly ❹.
4) Move the push plate ❺ in the direction of the arrow Ⓒ, turn the microswitch ❻ ON, and start the threading ❺ operation.

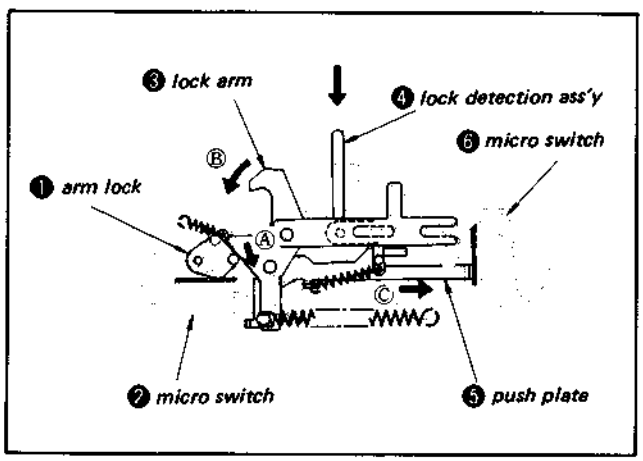

Fig. 3-5 (a)

[Recording Method]

1) Complete the threading operation.
2) While pressing the lock detection ass'y ❶, press the REC START/STOP button on the grip block.

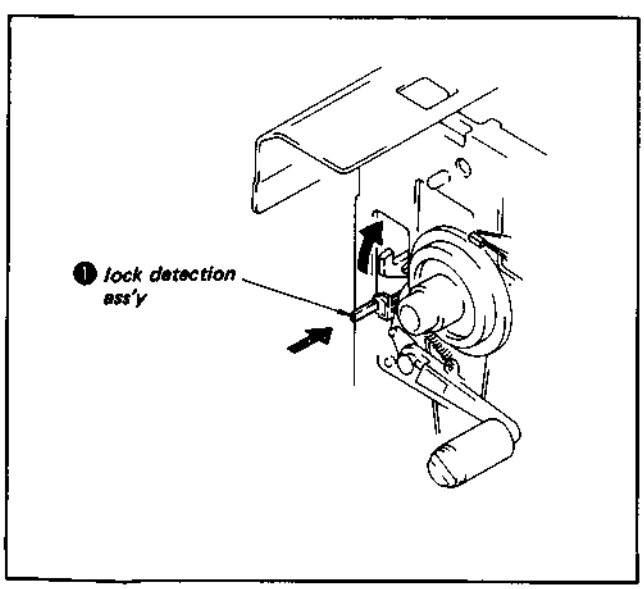

Fig. 3-5 (b)

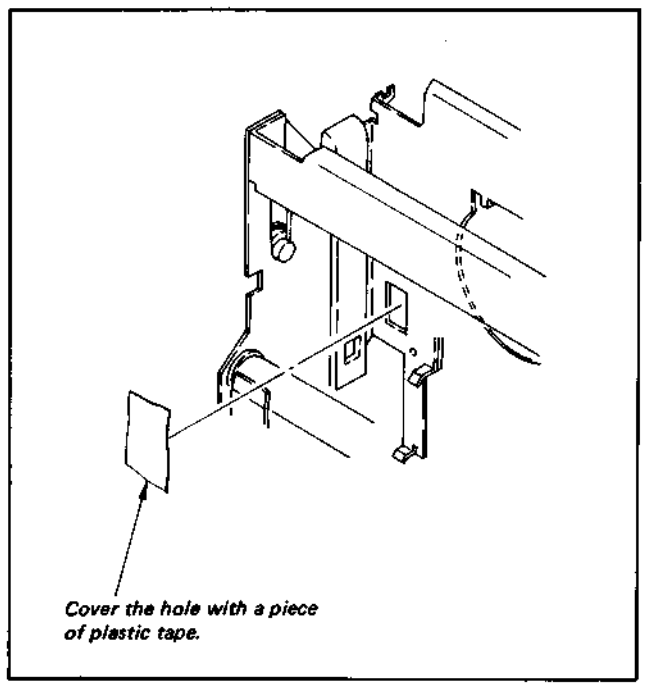

Fig. 3-6

3-3-1. Removal of Mechanical Parts

1. Removal of Cassette Compartment Lock Ass'y

1) Pull out the connector ❶.
2) Remove the two screws ❷.
3) Remove the cassette compartment lock ass'y.

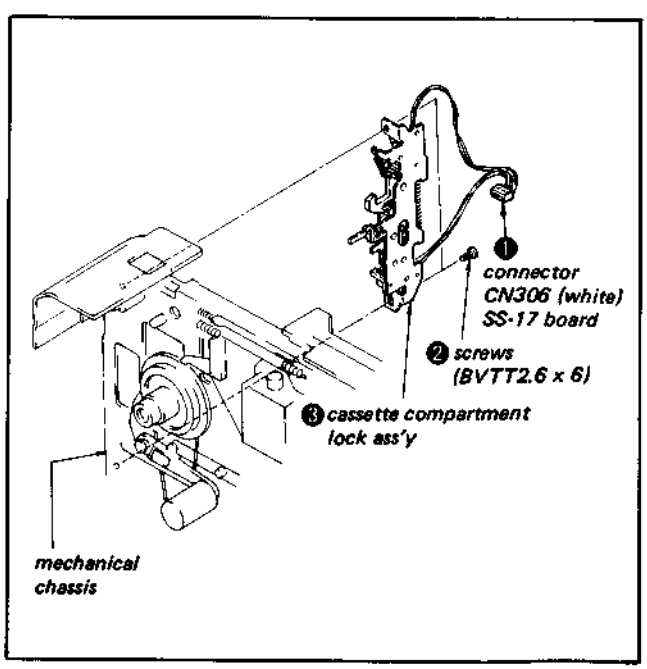

Fig. 3-7

2. Removal of Brake Solenoid Ass'y

- **When removing or replacing this unit, adjust the "brake solenoid location" and the "edit" function.**

1) Pull out the connector ❶.
2) Remove the two screws ❷.
3) Remove the brake solenoid ❸.
4) Remove the two screws ❹ and the BS cover ❺.
5) Pull out the spring pin ❻, and remove the brake solenoid ❼.

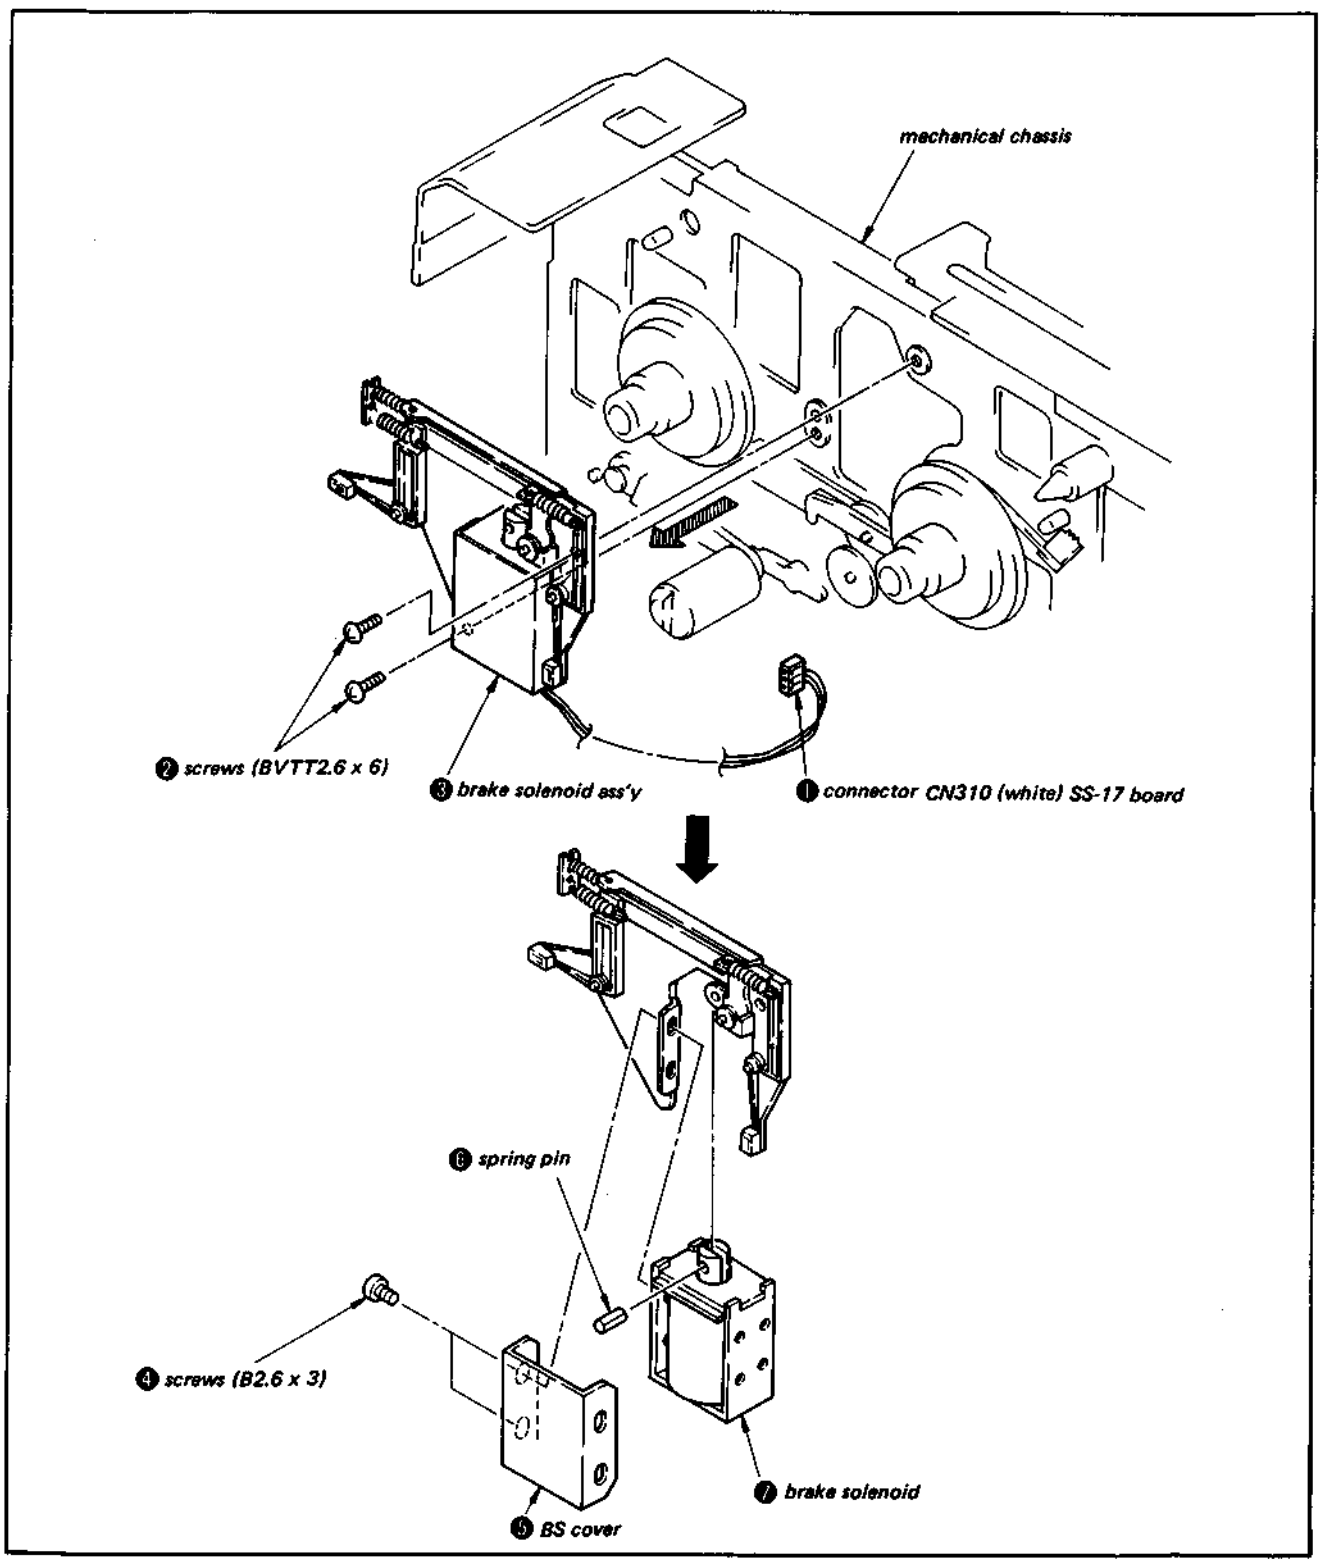

Fig. 3-8

3. Removal of the S Reel

1) Remove the stopper washer (2.3) ❶ .
2) Remove the S reel ❷ .

Note: Take care not to lose the thrust bearing.

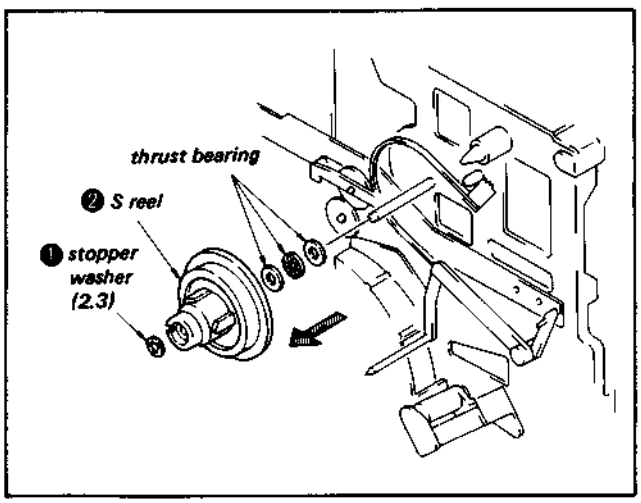

Fig. 3-9

4. Removal of the T Reel

1) Remove the stopper washer (2.3) ❶ .
2) Remove the FWD belt ❷ .
3) Remove the T reel ❸ .

Note: Take care not to lose the washers (1 or 2, depending on the set).

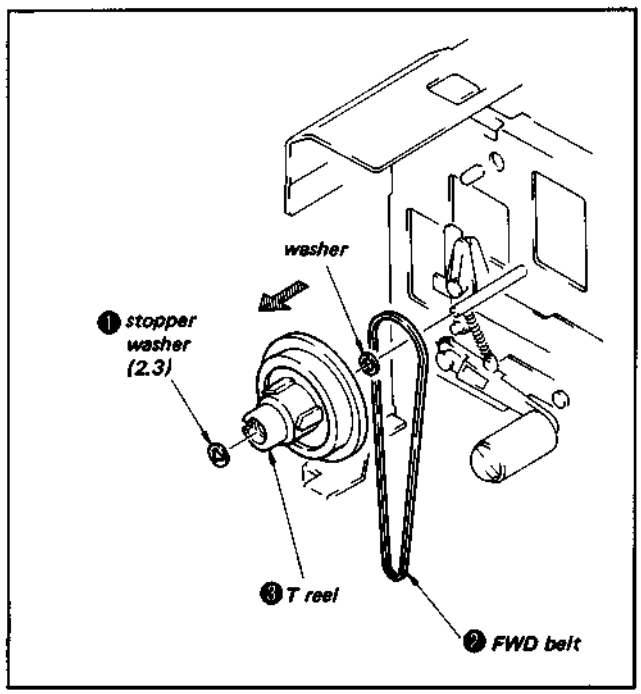

Fig. 3-10

5. Removal of Pinch Roller Ass'y

- **When removing or replacing this unit, perform the "pinch roller location adjustment".**

1) Remove the stopper washer (2.3) ❶ .
2) Remove the tension spring ❷ .
3) Remove the pinch roller ass'y ❸ .

Note: Take care not to lose the washer.

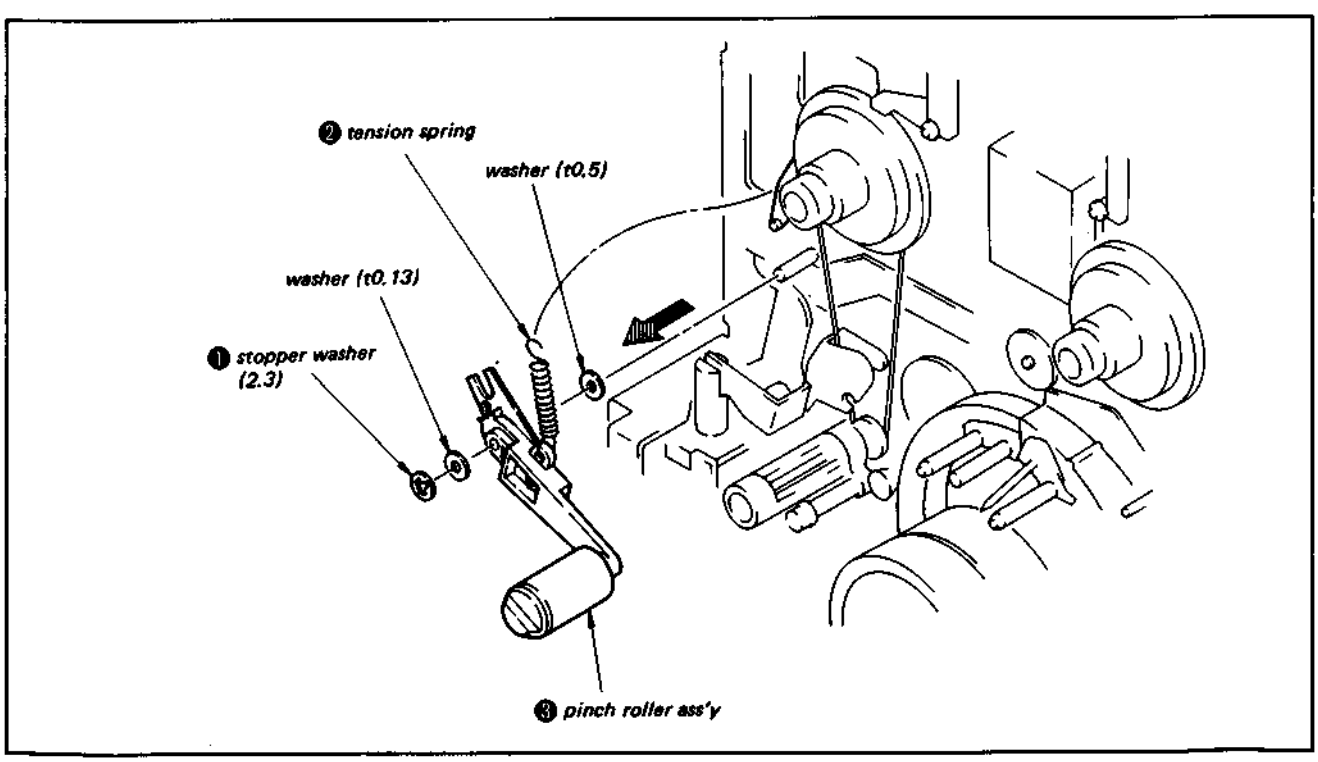

Fig. 3-11

6. Removal of Loading Motor Ass'y

1) Remove the screw ❶.
2) Remove the connector ❷ or the solder (Ⓐ section).
3) Remove the loading motor ass'y ❸.

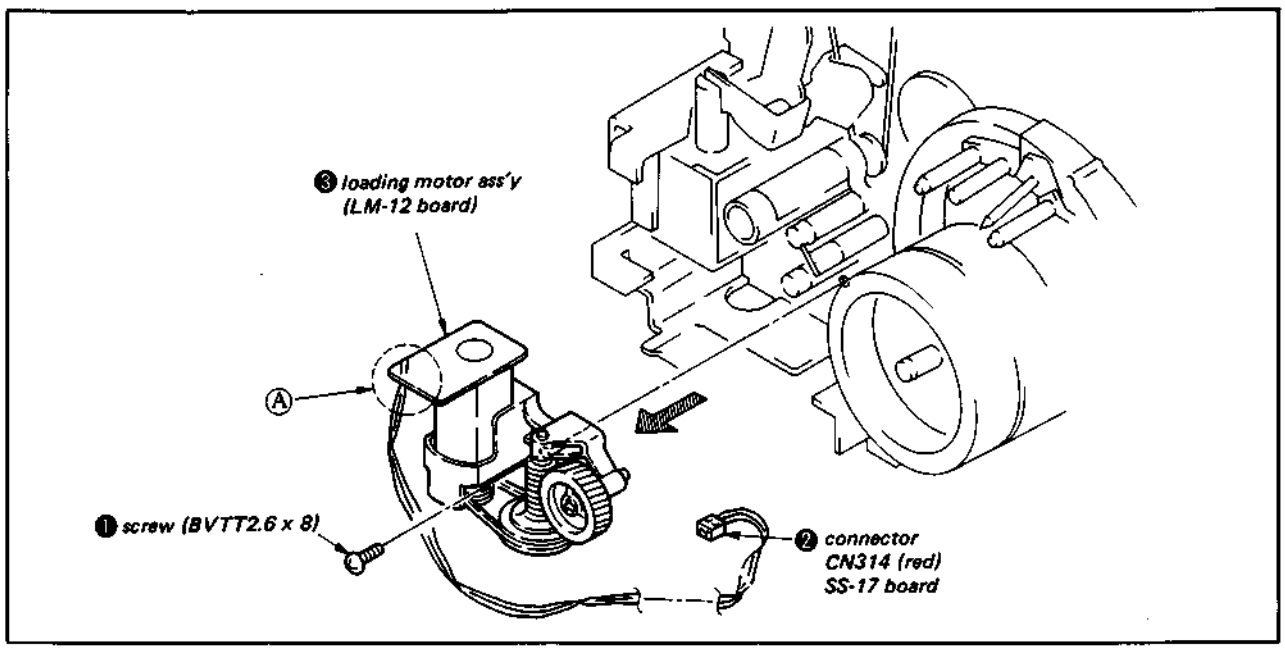

Fig. 3-12

7. Removal of Pinch Solenoid Ass'y

- **When removing or replacing this unit, adjust the "pinch solenoid location" and the "edit" function.**

1) Remove the tension spring ❶.
2) Pull out the connector ❷.
3) Remove the two stopper washers (2.3) ❸.
4) Remove the two screws ❹.
5) Press the FWD belt in the direction of the arrow Ⓐ, and remove the pinch solenoid ass'y ❺.

[Precautions to be taken on installation]

As shown in Fig. 3-13, twist in the direction of the arrow and secure.
If not twisted, the plunger will not operate smoothly.

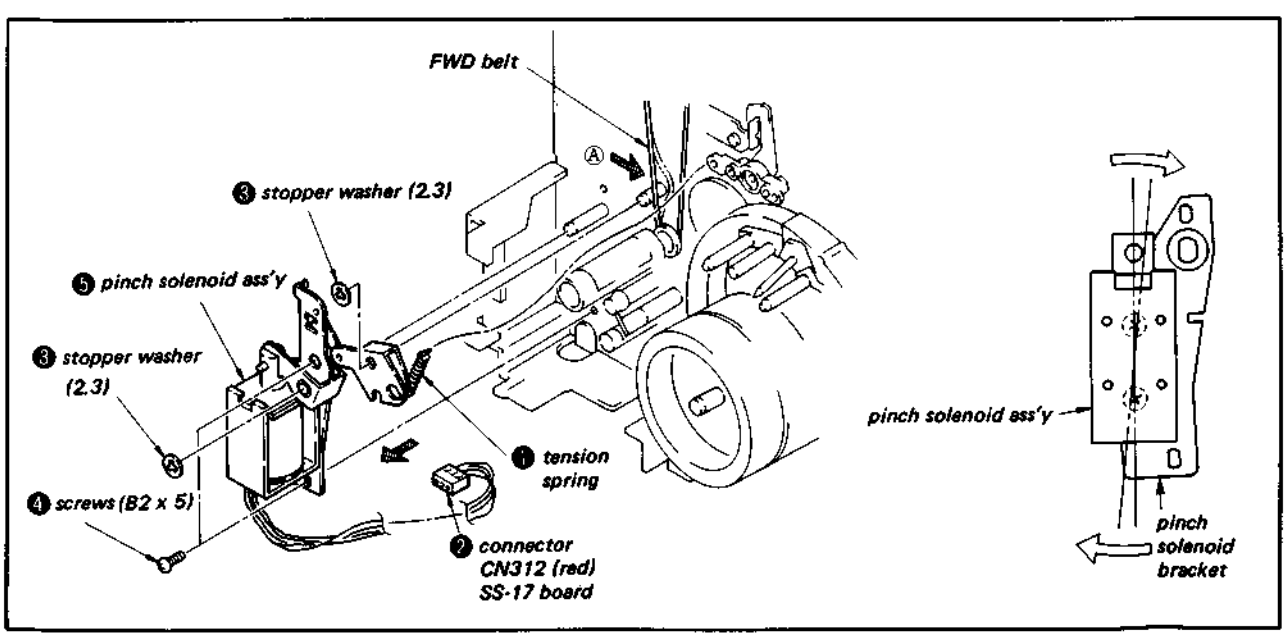

Fig. 3-13

8. Removal of Drum Motor Ass'y

1) Remove the drum belt ❶.
2) Remove the two screws ❷.
3) Remove the connector ❸ or the solder (Ⓐ section).
4) Remove the drum motor ass'y.

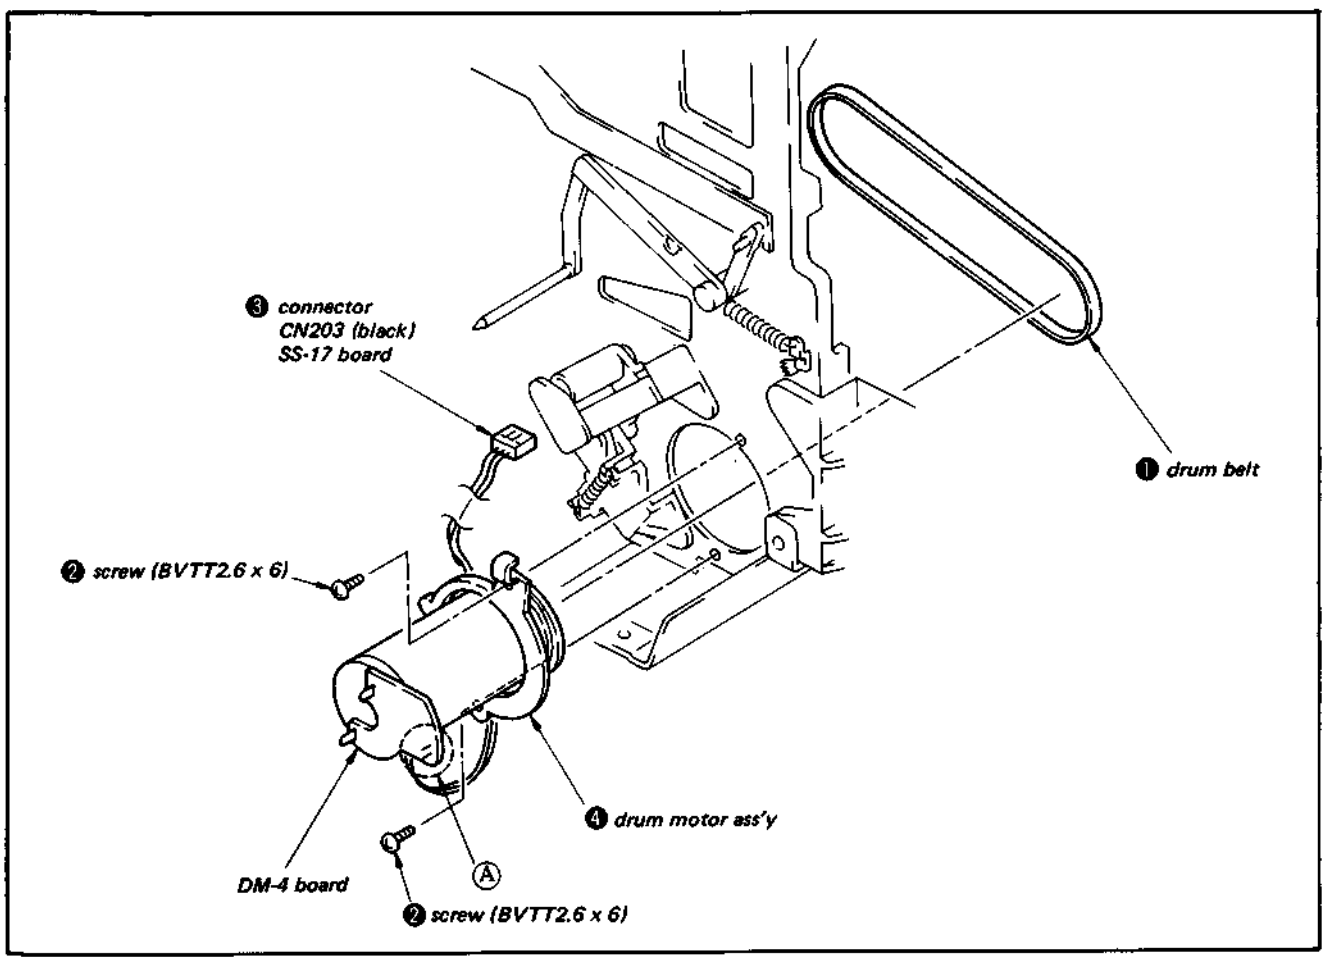

Fig. 3-14

9. Removal of FE Head Ass'y

1) Remove the two connectors ❶ or the solder (Ⓐ and Ⓑ sections).
2) Remove the screw ❷.
3) Remove the FE head ass'y ❸.

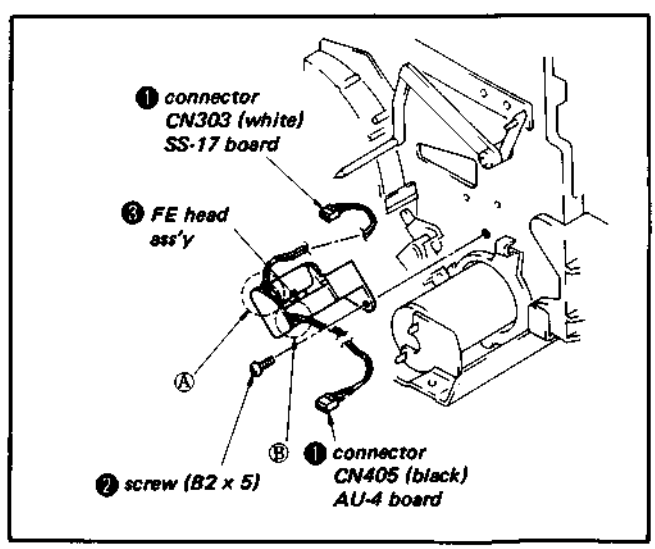

Fig. 3-15

10. Removal of AC Head Ass'y

- **When removing or replacing this unit, perform the "audio height adjustment" and the "audio azimuth adjustment".**

1) Remove the guide adjustment nut ❶.

Note: Take care not to lose the 3ϕ washer.

2) Remove the solder on the lead line.
3) Remove the AC head ❷.

Note: Take care not to lose the adjustment spring.

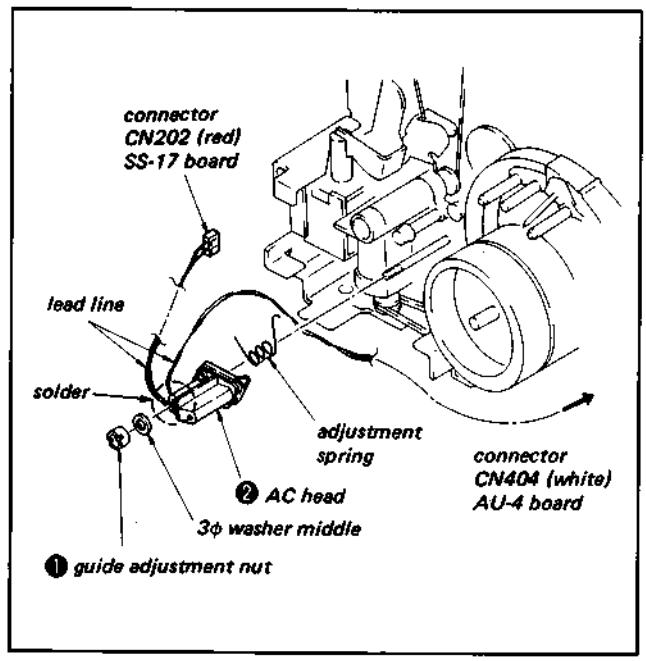

Fig. 3-16

11. Removal of Capstan Flywheel Ass'y

1) Remove the capstan belt ❶.
2) Remove the screw ❷.
3) Remove the thrust retainer plate ❸.
4) Remove the flywheel ❹.

Note: Take care not to lose the two oil seal rings (c).

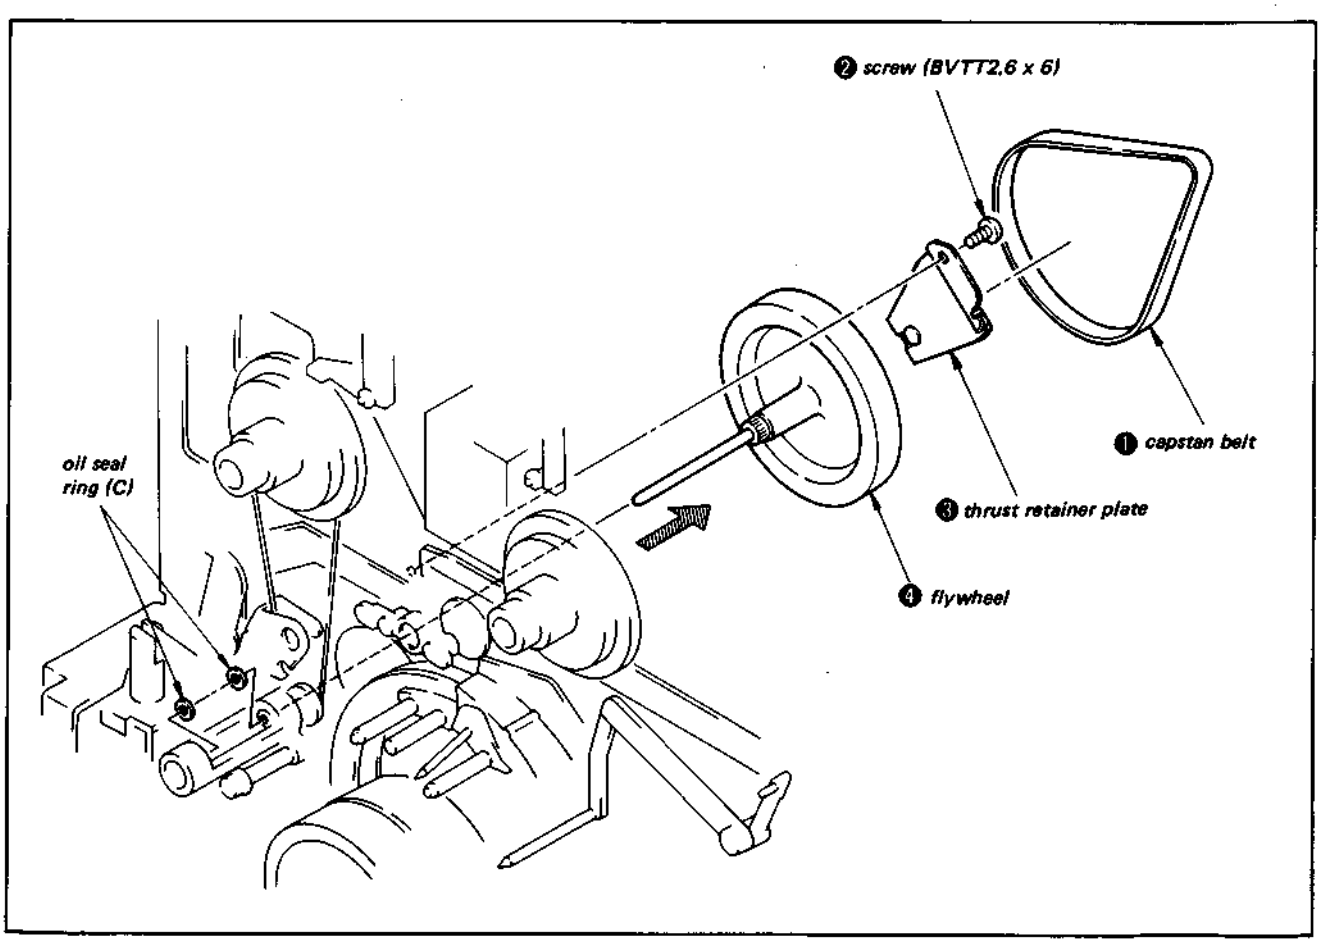

Fig. 3-17

12. Removal of Capstan Bearing Block Ass'y

- **When removing or replacing this unit, check the "tape path".**

1) Remove the three screws ❶.
2) Remove the capstan bearing block ass'y.

[Precautions to be taken on installation]

Press in the clockwise direction, then tighten the screws.

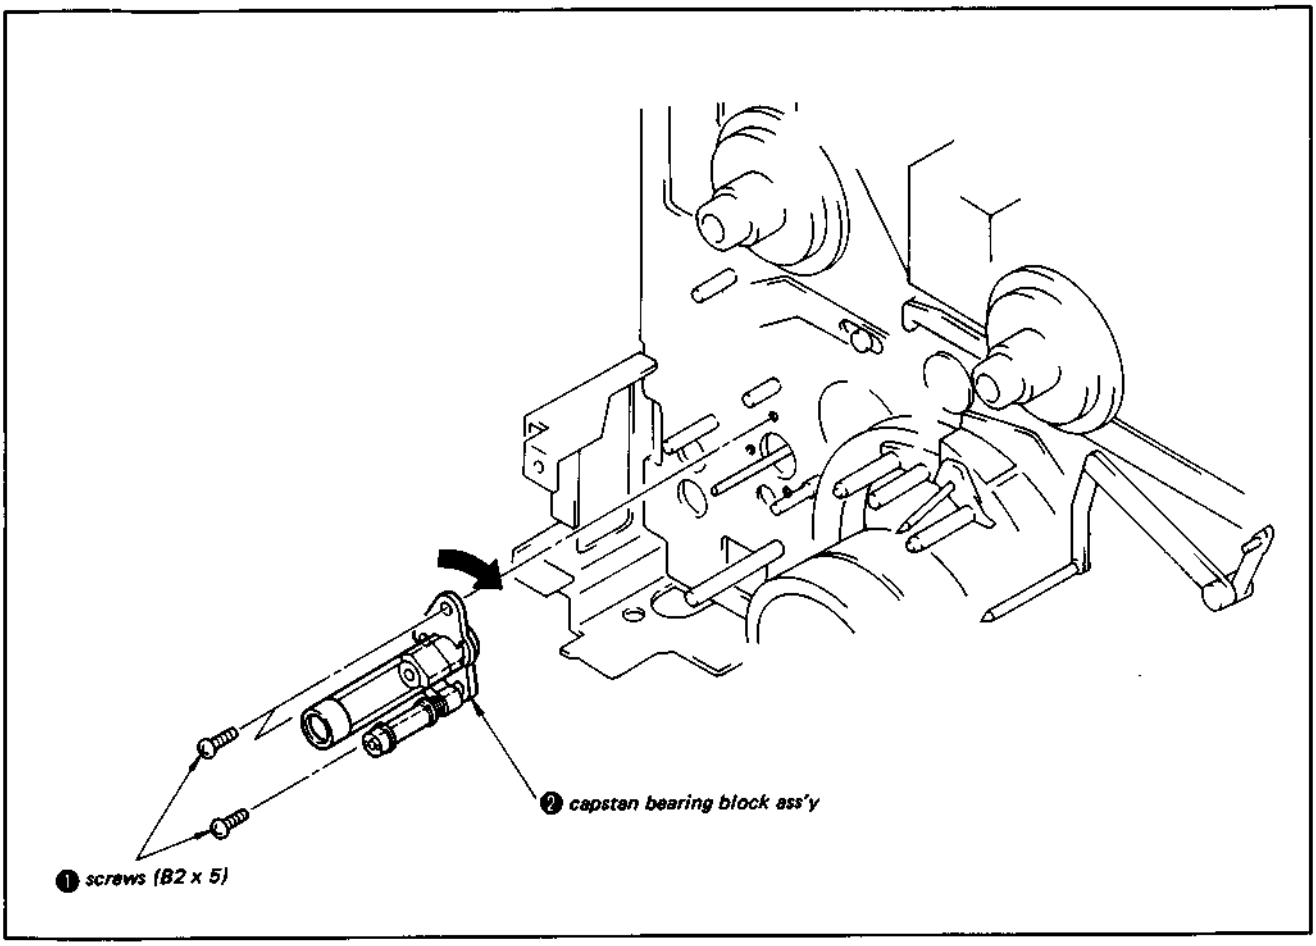

Fig. 3-18

13. Removal of TG-1 Base Block Ass'y

- **When removing or replacing this unit, check the "tape path".**

1) Remove the screw ❶.
2) Remove the TG-1 base block ass'y.

[Precaution to be taken on installation]

After installation, run an actual tape, equalize the vertical tape tension between No. 2 guide and No. 3 guide, and align the TG-1 base block ass'y ❷ position by turning in the direction of the arrow.

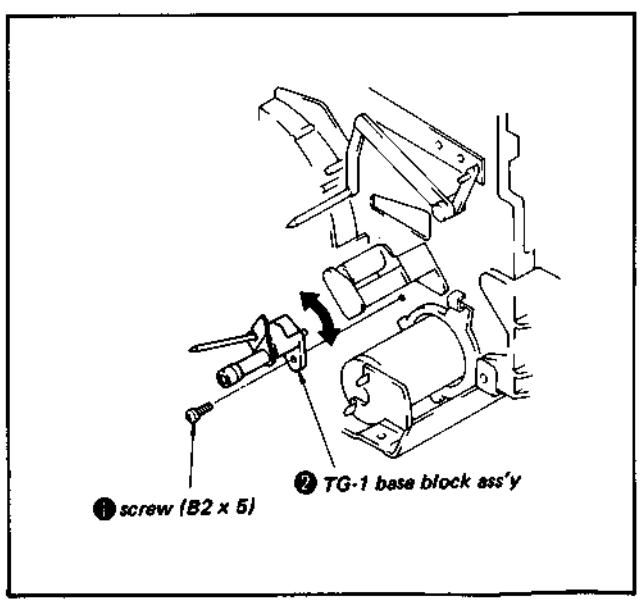

Fig. 3-19

14. Removal of Tension Regulator Band Ass'y

- **When removing or replacing this unit, perform the "tension regulator lever position adjustment" and the "FWD back tension adjustment".**

1) Remove the screw ❶.
2) Remove the tension spring ❷.
3) Remove the stopper washer (2.3) ❸.
4) Remove the tension regulator arm ❹.
5) Remove the tension regulator arm from the tension regulator band ❺.

Note: Take care not to lose the washer.

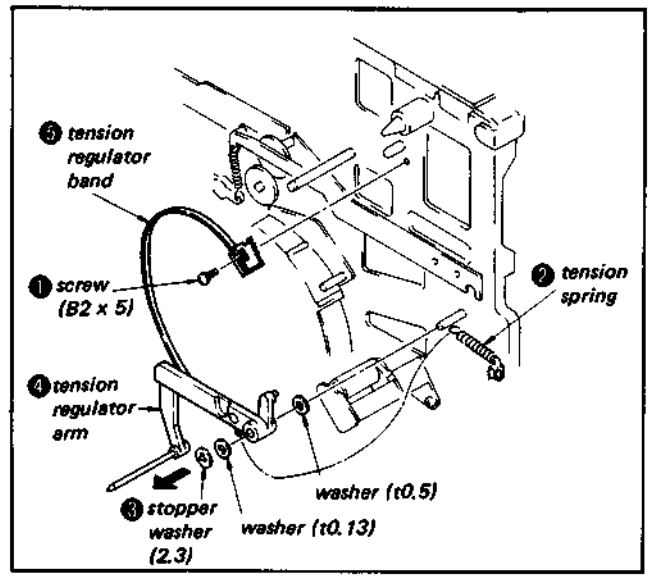

Fig. 3-20

15. Removal of Drum Ass'y

- **When removing or replacing this unit, check the "tape path".**

1) Remove the drum belt ❶.
2) Pull out the two connectors ❷.
3) Remove the two screws ❸.
4) Remove the drum ass'y ❹.

Note: Because there are cases where a drum spacer is also inserted, care should be taken not to lose it. Also, when installing and replacing the drum ass'y, this spacer should be properly installed.

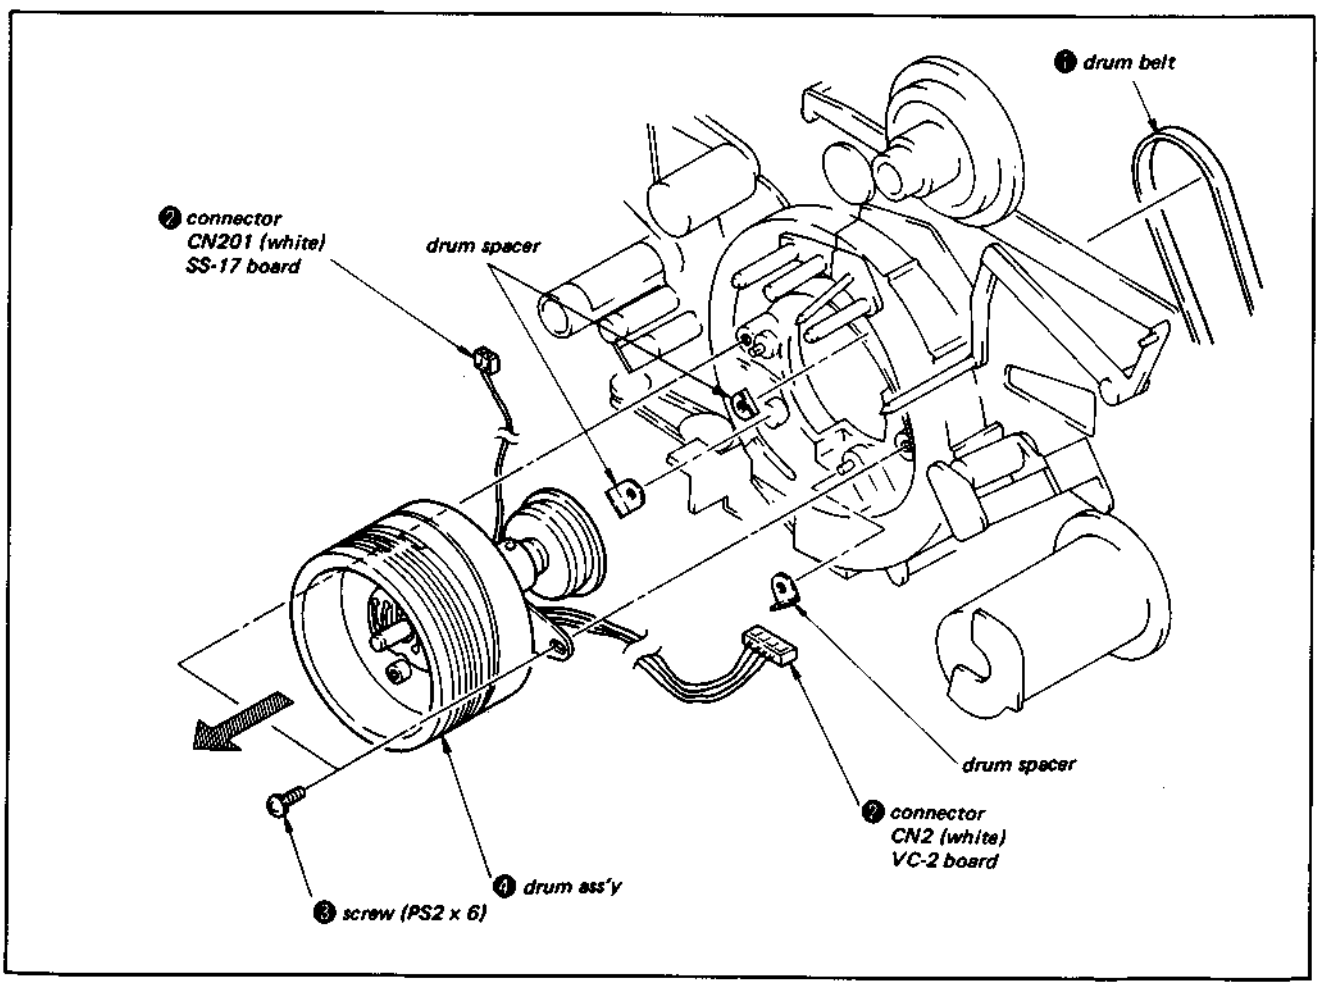

Fig. 3-21

16. Removal of Upper Drum (Rotary Drum)

- **When removing or replacing this unit, check the "tape path". and perform an "angle ratio alignment".**

1) Remove the hexagon hole bolt.

Note: Take care not to lose the two washers.

2) Remove the solder from the four enamel wires.

Note: Do not remove the solder from the vinyl wire.

3) Remove the upper drum ❷ .

Note: When removing the upper drum, leave the lower drum in place as far as possible, and take care not to disrupt the tape path.

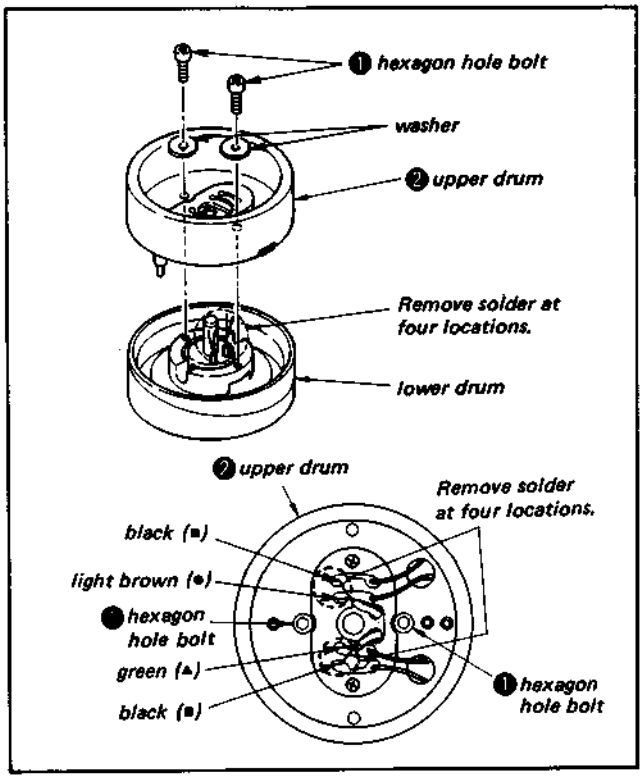

Fig. 3-22

17. Removal of Threading Guides (S-1), (S-2)

1) Remove the two screws ❶ .
2) Remove the threading guide (S-2) ❷ .
3) Remove the two screws ❸ .
4) Remove the threading guide (S-1) ❹ .

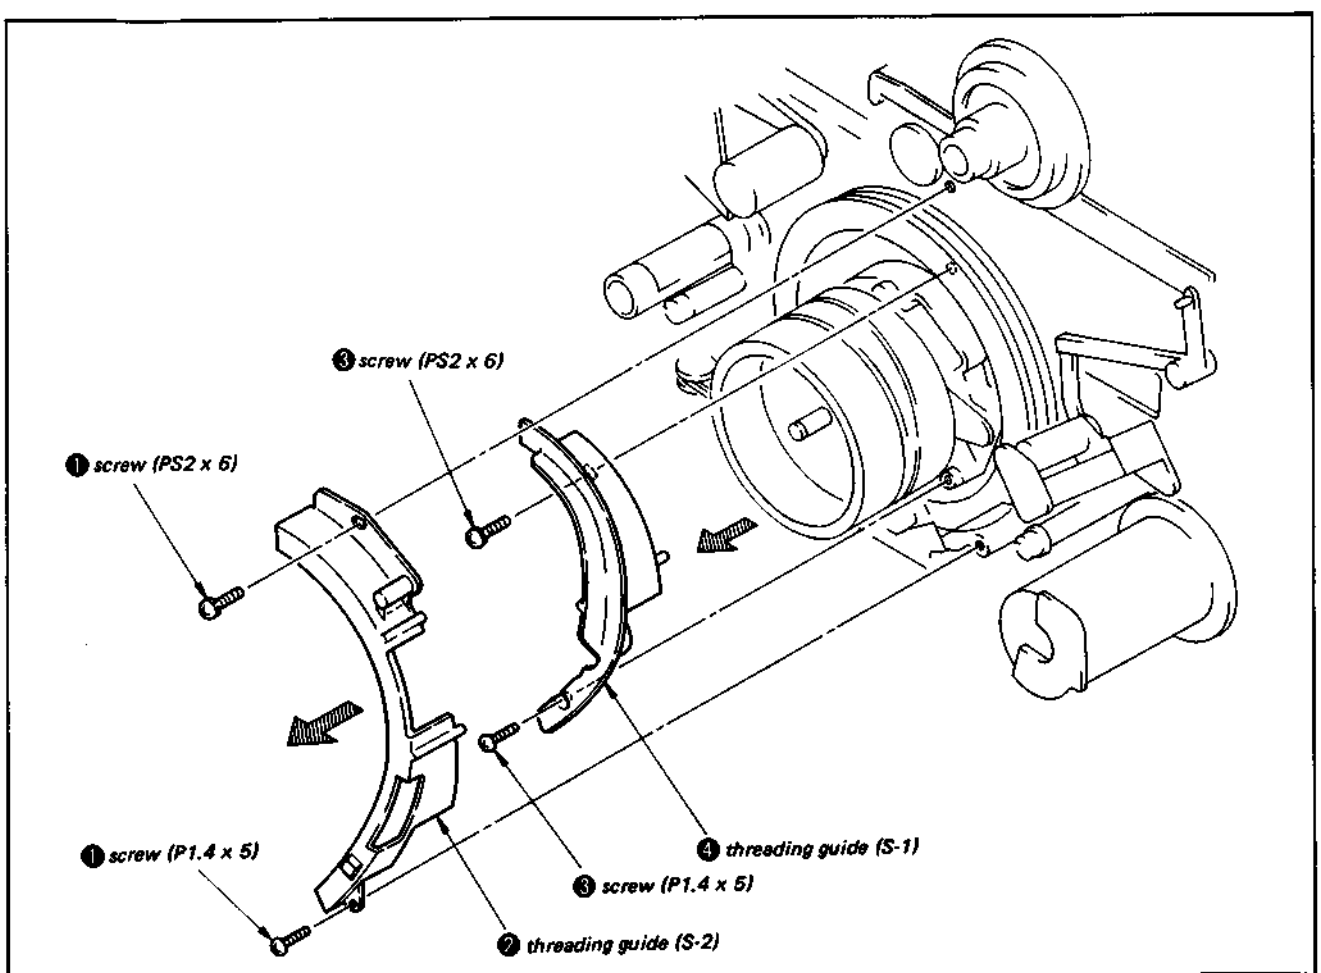

Fig. 3-23

18. Removal of Loading Rings (S), (T)

- **When removing or replacing this unit, perform the "loading ring (S), (T) location adjustment" and the "pinch roller position adjustment".**

1) Remove the four screws ❶.
2) Remove the DEW condensation sensor ❷.
3) Remove the drum base ❸.
4) Remove the two stopper washers ❹.
5) Remove the ring guide roller (A) ❺ (two places).
6) Remove the loading ring (T) ❻ in the direction of the arrow Ⓑ, while pressing it in the direction of the arrow Ⓐ.

* Remove the loading rings (S), and (T) without removing the ring guide rollers (three places).

7) Remove the ring guide roller (B) ❼.
8) Remove the ring guide roller (D) ❽.
9) Remove the loading ring (S) ❾ in the direction of the arrow Ⓑ, while pressing it in the direction of the arrow Ⓒ.
10) It is unnecessary to remove the ring guide roller (C) ❿ and the two washers, but care should be taken that they are not lost.

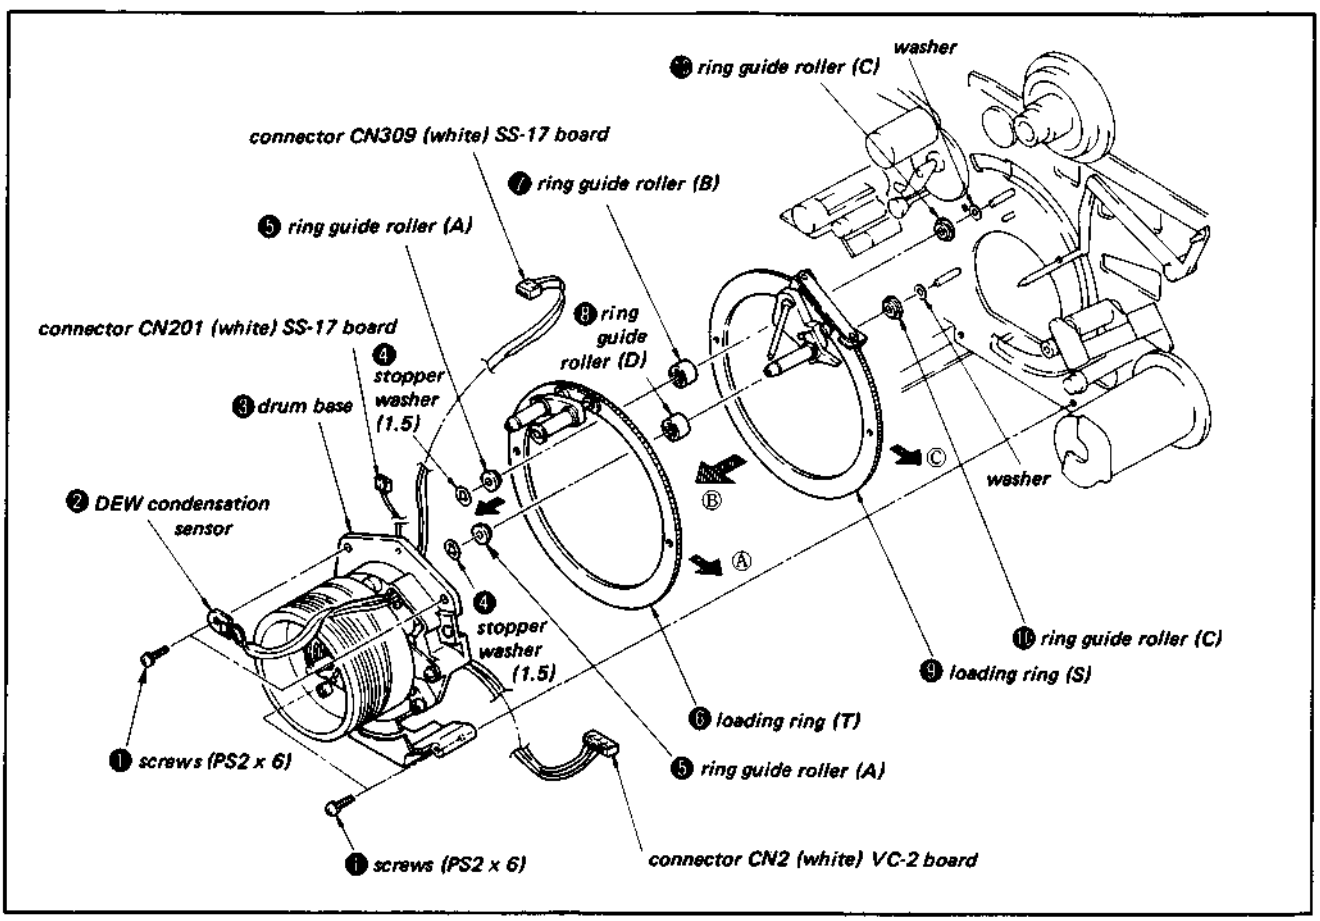

Fig. 3-24

19. Removal of TG-4 Base Block Ass'y

- **When removing or replacing this unit, check the "tape path".**

1) Remove the poly-washer (1.2) ❶.
2) Remove the TG-4 base plate (B) ❷.
3) Remove the poly-washer (1.2) ❸.
4) Remove the TG-4 base block ass'y ❹.

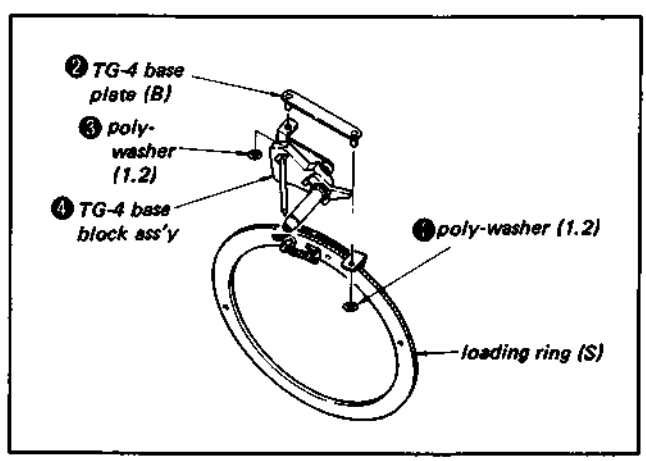

Fig. 3-25

20. Removal of TG-5 Base Block Ass'y

- **When removing or replacing this unit, check the "tape path".**

1) Remove the tension spring ❶ from Ⓐ section.
2) Remove the stopper washer ❷.
3) Remove the TG-5 base block ass'y ❸.

Note: Take care not to lose the TG-5 base poly-slider.

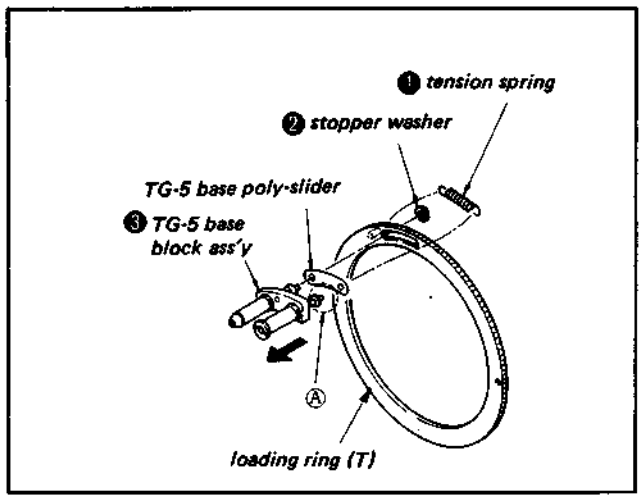

Fig. 3-26

21. Removal of Midway Pulley (P) and Relay Pulley Ass'y

[Removal of Midway Pulley (P)]

- **When the relay pulley has been replaced, perform the "tape speed alignment".**

1) Remove the relay belt ❶.
2) Loosen the set-sct hexagon screw ❷ and remove the midway pulley (P).

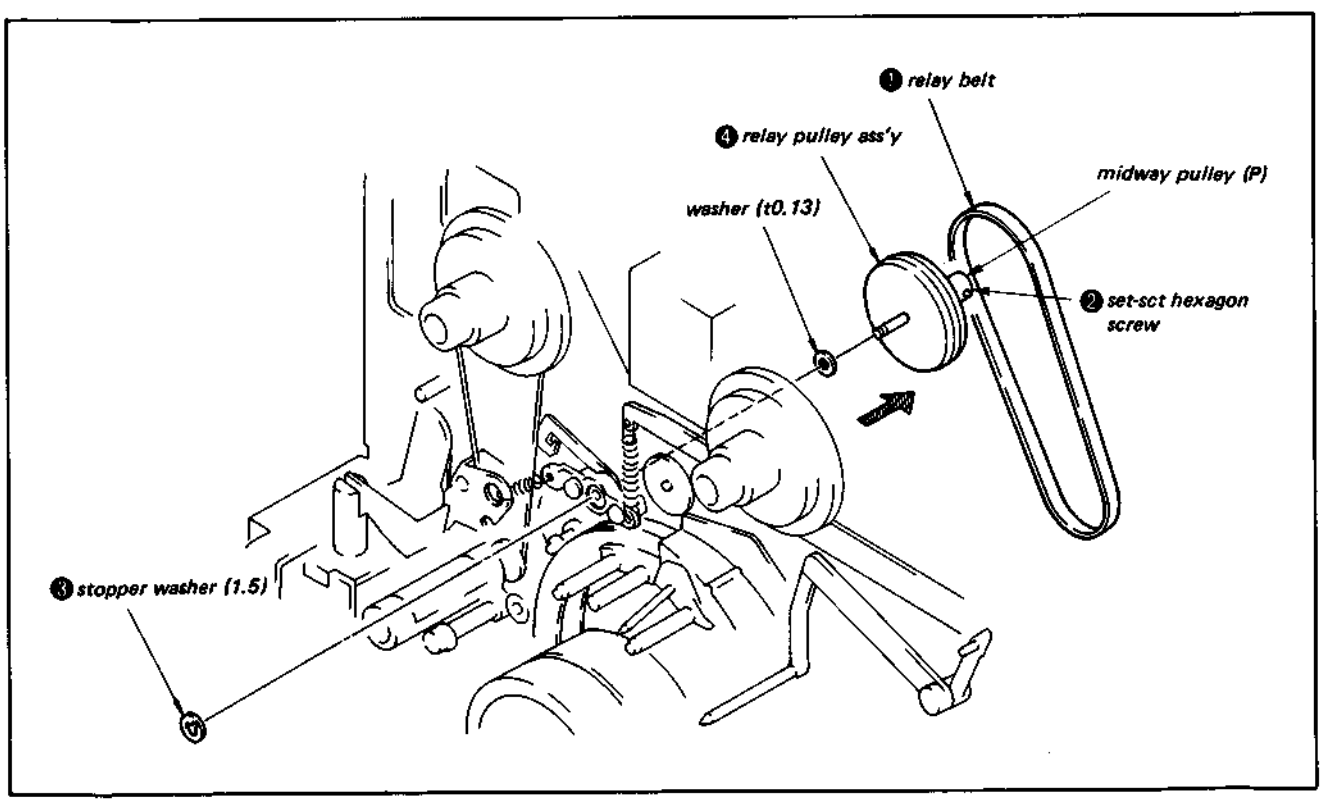

Fig. 3-27

[Removal of Relay Pulley Ass'y]

- **When the midway pulley (P) has been replaced, perform the "tape speed alignment".**

1) Remove the relay belt ❶.
2) Remove the stopper washer (1.5) ❸.
3) Remove the relay pulley ass'y ❹.

3-3-2. Mechanical Alignment

1. Adjustment of Loading Motor Pulley Opening

1) Adjust the opening between the loading motor pulley ❶ and the motor case ❷ to 3mm.

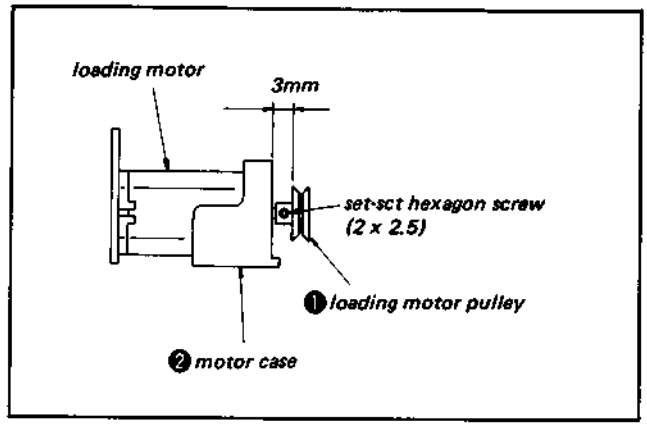

Fig. 3-28

2. Adjustment of Drum Motor Pulley Opening

1) Adjust the opening between the drum motor pulley ❶ and the drum motor bracket ❷ to 3mm.

3. Adjustment of the Position of the Loading Ring (S), (T)

- **When making this adjustment, check the "pinch roller position adjustment".**

1) Secure the loading gear (S) ❶ with the stopper washer (1.5) ❷.
2) Put the loading rings (S) ❸ and (T) ❹ in threading status.
3) Line up the loading rings (S) and (T) with the positioning holes in the mechanical chassis.
4) Engage the loading gear (T) ❺, and secure it with the stopper washer (1.5) ❻.

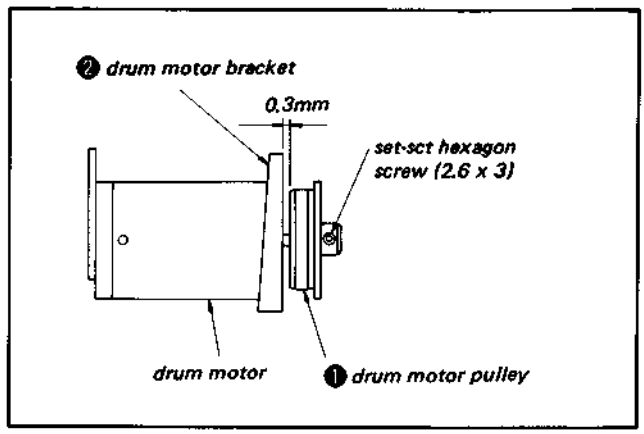

Fig. 3-29

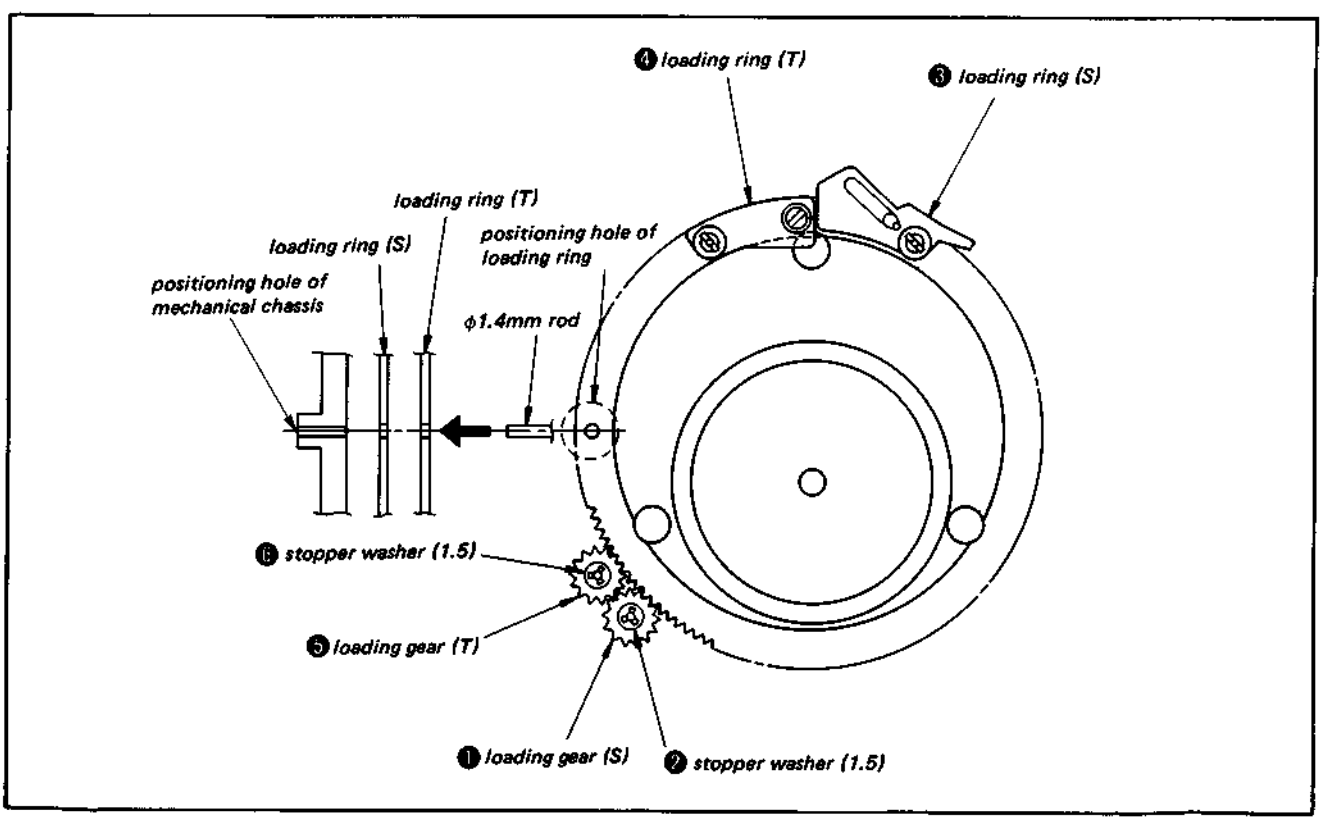

Fig. 3-30

4. Adjustment of the Position of the Driving Gears (A), (B)

1) Put in threading status and line up the loading ring positioning holes.
2) Press the PT function lever ❶ in the direction of the arrow and line up the mechanical chassis and PT function lever ❶ positioning holes, then secure the PT function lever by inserting the 1.4mm diam rod.
3) Engage the driving gears (A) ❷ and (B) ❸ as indicated in the drawing.

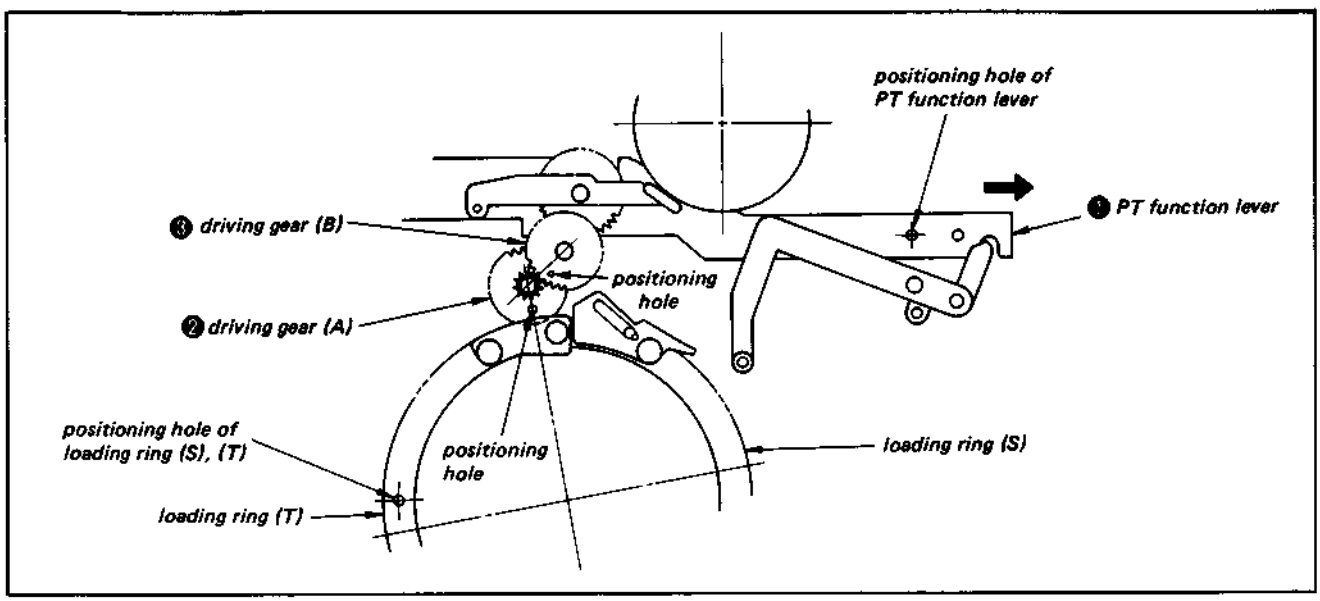

Fig. 3-31

5. Adjustment of the Position of the Pinch Solenoid

1) Loosen the two screws ❶.
2) Press the plunger ❸ of the pinch solenoid ❷ in the direction of arrow Ⓐ.
3) At that time, move the PS bracket ❻ in the direction of arrow Ⓑ, so that the opening between the pinch press lever ❹ and the pinch press lever (D) ❺ becomes 0.5mm.
4) Tighten the two screws ❶.
5) Turn on the power, press the REC START/STOP button, and turn the pinch solenoid ON/OFF, and confirm that the opening is 0.5mm.

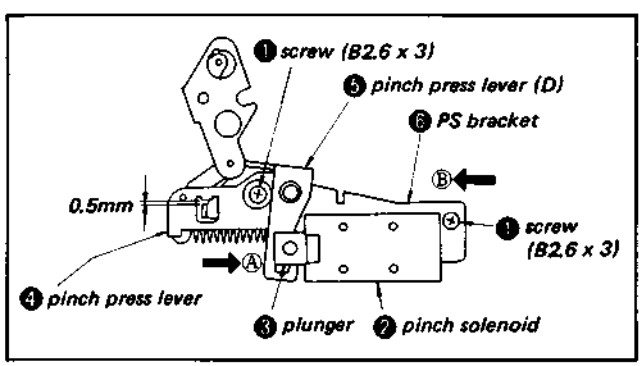

Fig. 3-32

6. Adjustment of the Position of the Brake Solenoid

1) Press the plunger of the brake solenoid in the direction of the arrow Ⓐ. First set the brake rubber to touch the S reel and T reel, then press the plunger further. Next adjust the brake solenoid position in the Ⓑ direction and set with the screws ❺.
2) With the plunger ❷ pulled in the direction of the arrow Ⓒ, adjust the opening between the brake rubber ❹ and the S reel and T reel to 0.5 to 1.0mm.

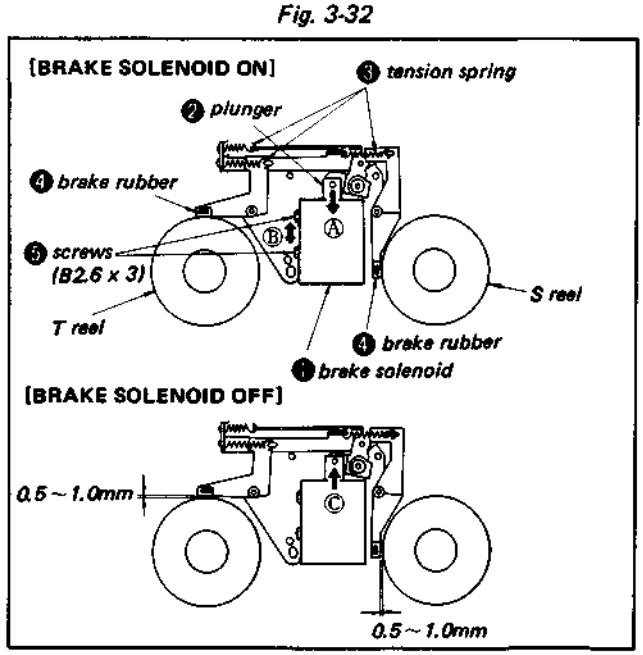

Fig. 3-33

7. Adjustment of the Position of the Pinch Roller

1) Turn on the power, and after completing the threading operation, press the REC START/STOP button two or three times to turn the pinch solenoid ON and OFF.

Note: If threading is done manually, the final threaded position will be inaccurate. Therefore, threading should always be carried out with the power applied, after which the pinch solenoid should be turned ON and OFF.

2) Loosen the screw ❶ , and adjust the opening between the pinch roller ❷ and the capstan shaft ❸ to 0.5mm.
3) Depress the REC START/STOP button, and turn the pinch solenoid ON and OFF, to confirm that the opening is 0.5mm.

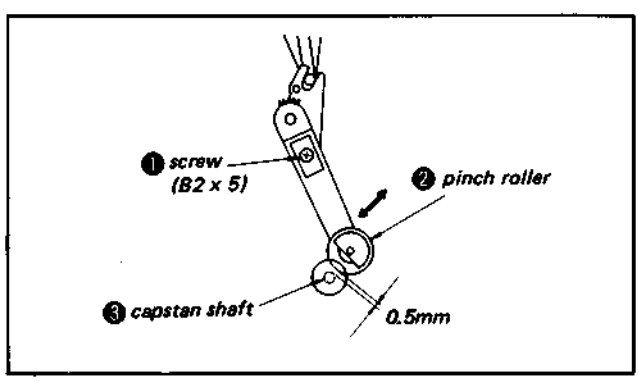

Fig. 3-34

8. Adjustment of the Position of the Tension Regulator Arm

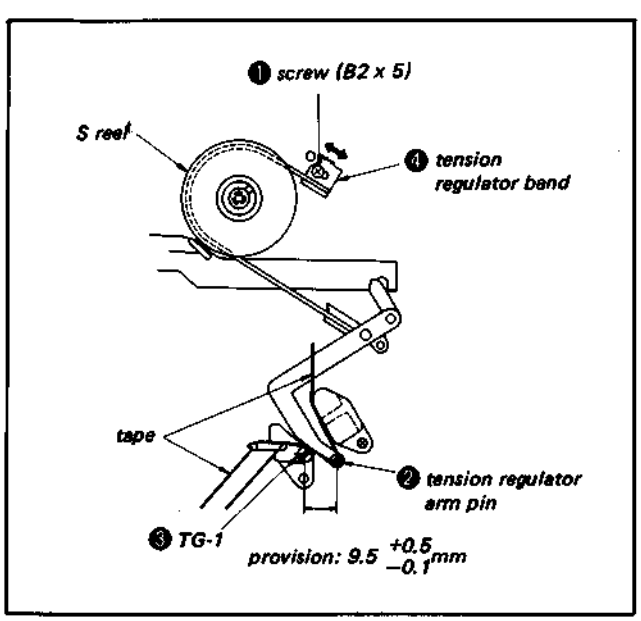

Fig. 3-35

1) Apply power, and record without a cassette.
2) Loosen the screw ❶ , adjust the center-to-center distance of the tension regulator arm pin ❷ and TG-1 ❸ to about 10.5mm, and temporarily stop the tension regulator band ❹ .
3) Insert a cassette and start to record. Confirm that the abovementioned distance is 9.5 $^{+0.5}_{-0.1}$mm.
4) If this provision is not satisfied, readjust the tension regulator band position ❹ .

9. Adjustment of the FWD Back Tension

1) Set the reel table tension gauge ❶ and run the tape through at 2cm/sec.

Note: Run the tape through so that it is in contact with the outer circumference of the upper drum (rotary drum).

2) Loosen the screw ❷ and adjust the position of the spring retainer ❹ with the sector type gauge (for 50g) ❸ showing 35 to 40g.
3) Tighten the screw ❷ .

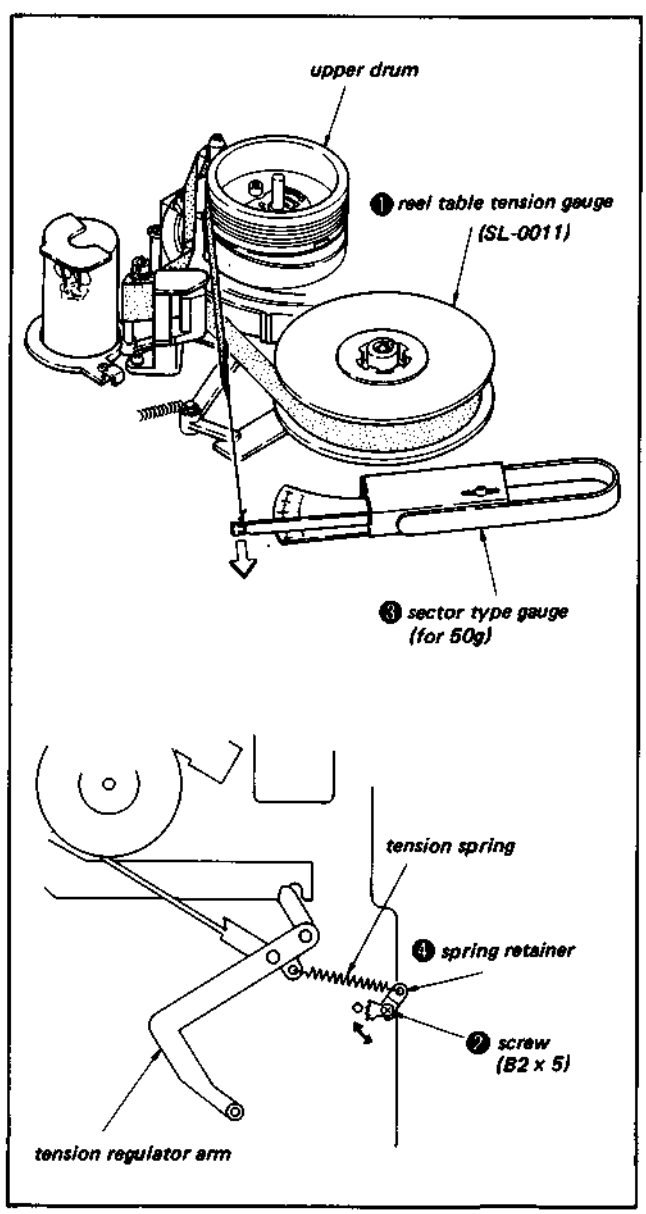

Fig. 3-36

10. Tape Speed Adjustment

This unit has only a drum servo and no capstan servo. Therefore the tape speed (2cm/sec) is determined by midway pulley (P).

Connection diagram

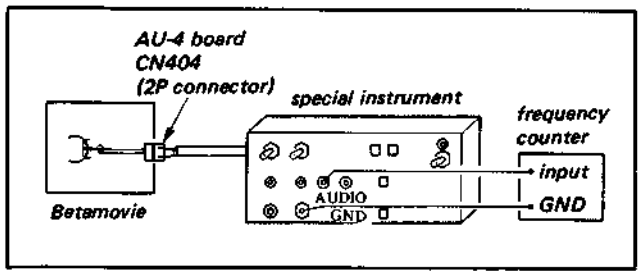

Fig. 3-37

[Adjustment method]

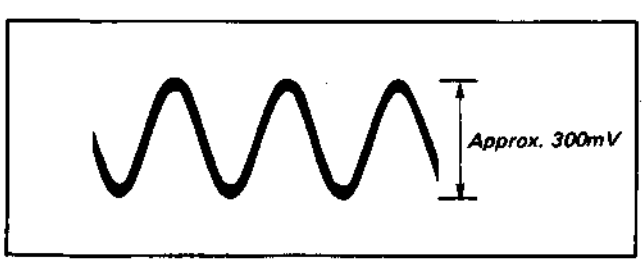
Mode: Playback
Signal: Alignment tape 3kHz signal
Frequency counter: Special instrument AUDIO SIG terminal

1) Playback alignment tape 3kHz (color bar).

Note: If the safety tab of the alignment tape has been removed, cover that section with tape.

2) Correct the frequency counter value.

- Correction method
  The Tape Speed Calibration Value is recorded on the alignment tape.
  * For example, if this value is 0.1%, when the frequency counter shows 2,997Hz, the Speed, i.e. 2cm/sec, is correct.
  * At −0.1%, 3,003Hz is displayed at the correct speed.



Special instrument AUDIO SIG terminal

Fig. 3-38

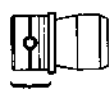
3) Replace the midway pulley (P) to obtain the corrected frequency $^{+6}_{-18}$Hz.

Midway pulley (P): 3-682-740-□□ (0 to 9) ← Figure showing diam.

End

Diameter (Note 1)	Number	0	1	2	3	4	5	6	7	8	9
	Code		I	II	III	IIII	I	II	III	IIII	IIIII
	Smaller ← → Larger										
Tape speed	Slower ← → Faster										
Remarks	The frequency changes about 7Hz for a one rank difference in diameter.										

Note 1: Diameter identification



Wide grooves and narrow grooves indicate diameter.

11. Adjustment of AC Head (Audio/CTL)

- Connect the special instrument (signal converter BMCJ-888P) and make the adjustment.

Adjustment terminology

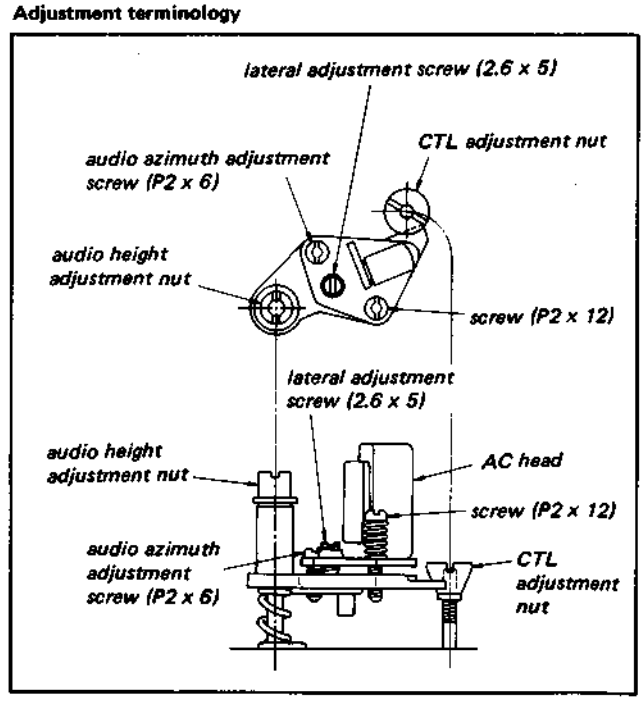


Fig. 3-39

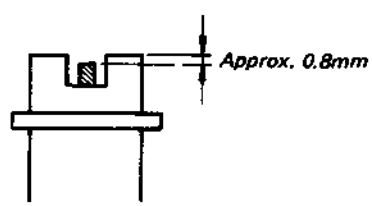
[Height adjustment]

1) Turn the audio height adjustment nut and set as shown in the following diagram.



2) Play back the 333Hz section of the alignment tape and adjust the audio height adjustment nut to get the maximum output level.
3) Confirm that there is no curling in the No. 7 guide.

[Azimuth adjustment]

1) Play back the 5kHz section on the alignment tape and adjust the audio azimuth adjustment screw to give the maximum output level.
2) Run the tape for a short time to confirm that there is no extensive change in the output level.

[Lateral adjustment]

- **When this adjustment is made, carry out the "height adjustment" and "azimuth adjustment".**

1) Play back the 5kHz section on the alignment tape.
2) Confirm that there is no curling in the No. 7 guide.
3) Turn the lateral adjustment screw until the output level remains unchanged when pressure is applied to the tension regulator arm ❶ in the direction of the arrow.

Note: Adjust the lateral adjustment screw within a range of 45deg.

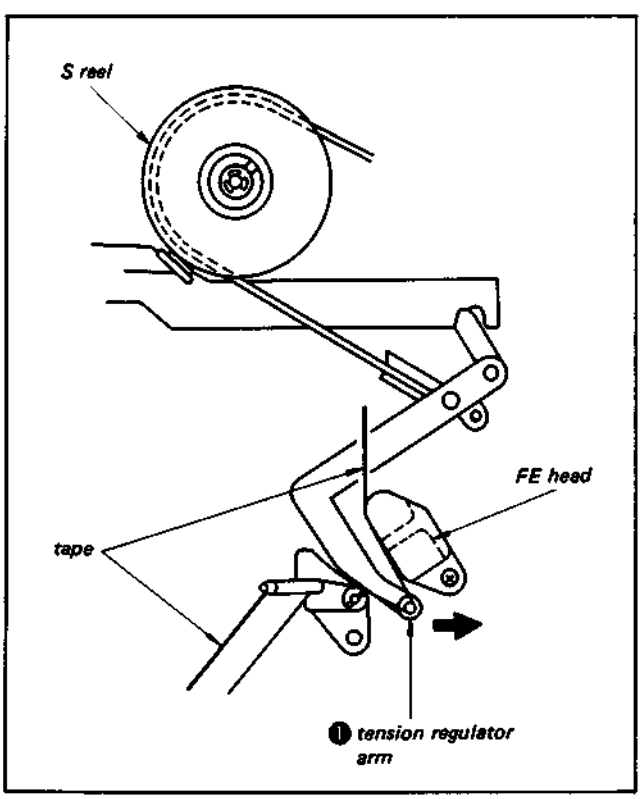


Fig. 3-40

12. Adjustment of the Position of the CTL (AC Head)

- Connect the special instrument (signal converter BMCJ-888P) and carry out the adjustment.

Adjustment terminology

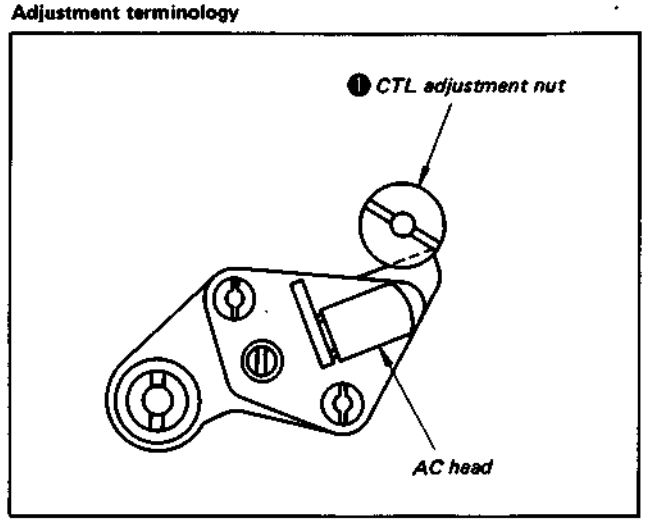

Fig. 3-41

Mode: Playback
Signal: Alignment tape tracking signal (KR5-3C is recommended)
* KR5-3C: This tape is made especially for tracking, and has a recorded time of 40min.
Oscilloscope: CH-1 RF terminal of special instrument
CH-2 TP204 (CTL signal) of SS-17 board

[Adjustment method]

1) Adjust the CTL adjustment nut until the CTL signal and phase are as shown in the following diagram at maximum RF output.

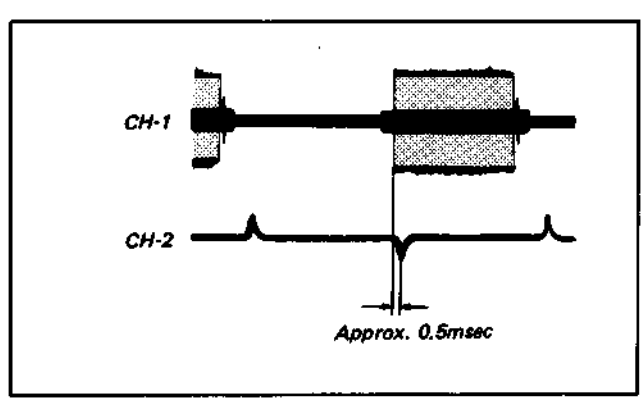

Fig. 3-42

2) Confirm that there is no noise, even when the TRACKING knob on the playback VTR is rotated ±30deg, when the tape being played back on the VTR is a 100% white signal recording made on the Betamovie.

3) If noise occurs, switch from the Betamovie recording → playback on the VTR → recording after turning the CTL adjusting nut on the Betamovie → playback on the VTR.

13. Checking FWD Torque

To measure, FWD torque, set the measuring cassette (SL-0003C) and confirm that the T-reel indicator reaches 40 $^{+10}_{-14}$g·cm.

* If the standard is not met, replace the T reel and check that the value falls within the standards.

3-4. TAPE PATH ADJUSTMENT

This adjustment significantly effects the picture quality in each mode and the interchangeability of the tape, so great care should be taken in carrying it out.

3-4-1. Tracking Adjustment

1. Preparation

1) Connect the special instrument (signal converter BMCJ-888P). (See page 4. Fig. 1-3)
2) Check the tape speed
   This unit does not have a playback servo, so tracking failures can occur periodically, and the RF output level changes. For this reason, the conventional method of adjusting with a TRACKING knob to set at 2/3 of the maximum output level cannot be applied. Therefore, adjustment is made during a change in the RF output level, and it is necessary to first check whether the adjustment is made during an increase or a decrease.

[Checking method]

While looking at the special monitor (converted to f_H=18.75kHz), or while looking at the oscilloscope connected to the RF terminal of the special instrument (BMCJ-888P), touch the capstan flywheel with the fingertips, and change the RF output level.

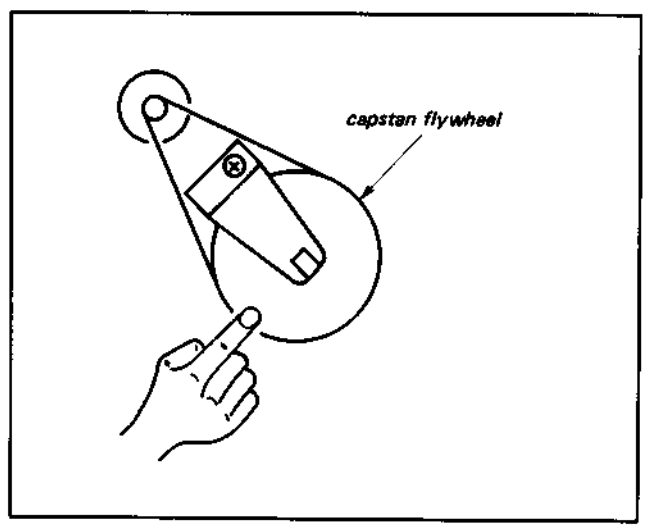

Fig. 3-43

Direction of change	Tape Speed	Adjustment made
Same direction	Slow	During increase
Reverse direction	Fast	During decrease

The same direction is defined as the condition when:

- During an increase, when touching the flywheel, the output level increases.
- Druing a decrease, when touching the flywheel, the output level decreases.

The reverse direction is defined as the condition when:

- During an increase, when touching the flywheel, the output level decreases.
- During a decrease, when touching the flywhee, the output level increases.
- Using the above method, check the tape speed to determine whether the RF output level should be increased or decreased.

3) Check the adjustment level
Check the maximum value of the RF output level, and adjust to 2/3, or check that level (noting it).

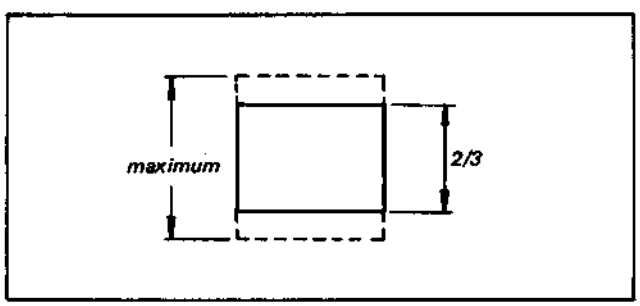

Fig. 3-44

2. Adjustment method

Diagram showing adjustment guide arrangement

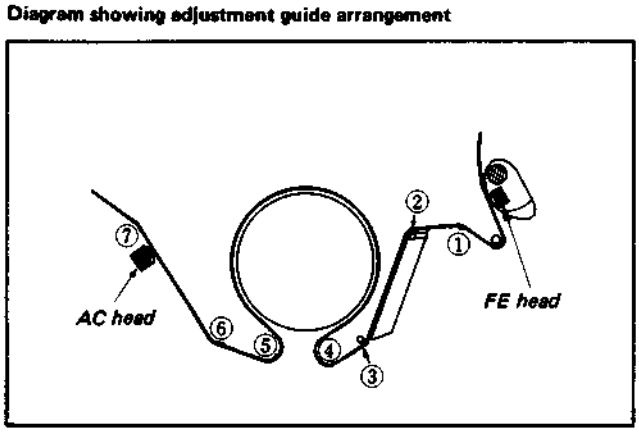

Fig. 3-45

The tape guides are numbered from No. 1 to No. 7. The role of each is as follows.

Guide No.	Role
No. 1 guide	Vertical regulation
No. 2 & No. 3 guides	Fixed guides (no regulation)
No. 4 & No. 5 guide	Upward regulation
No. 6 guide	Downward regulation
No. 7 guide	Upward regulation

[Rough adjustment]

First make an approximate alignment at the tape entrance and exit side.

1) Rotate No. 6 & No. 7 guides to create a space of 0.2mm between the guides and the tape.
2) Check that there is tape at the lighted section of the FE head (core section).
If not set No. 1 guide according to Fig. 3-46.

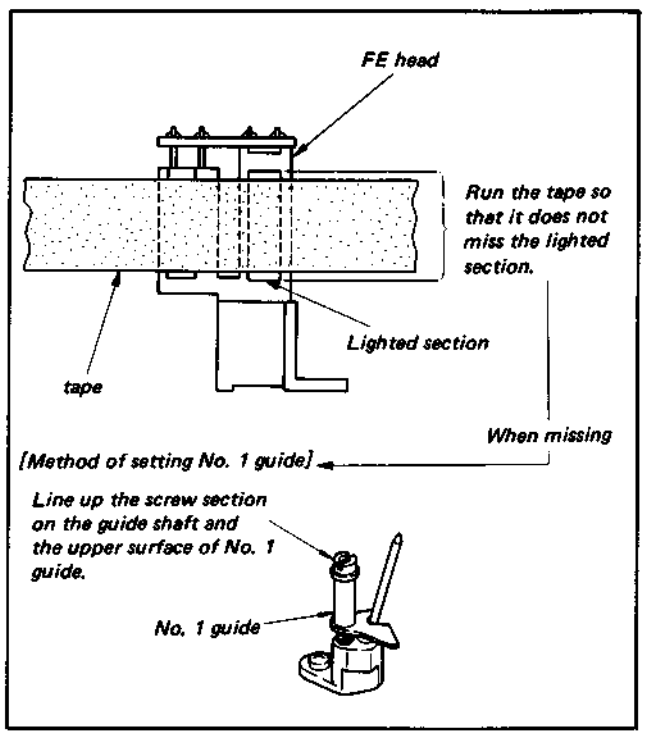

Fig. 3-46

[Fine adjustment]

Entrance side adjustment

1) Make the tape as flat as possible at No. 1 and No. 4 guides.
2) Check that there is tape at the lighted section of the FE head (core section).
3) Any curl at No. 1 guide and No. 4 guide must be less than 0.5mm.
4) Set No. 4 guide with the lock screw.

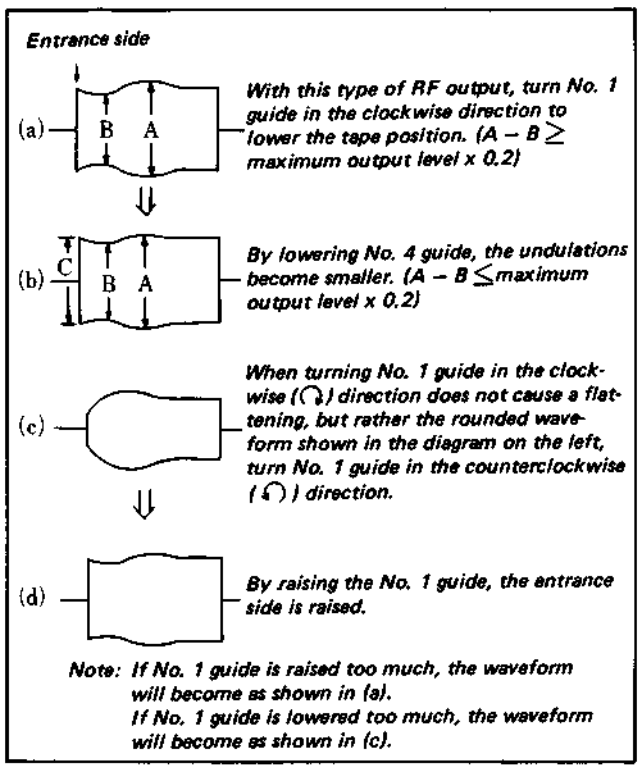

Fig. 3-47

[Exit side adjustment]

1) Adjust with No. 5 guide to obtain a flat or slightly sagging pattern, then set with the lock screw.
2) Check to see that the tape runs parallel to the upper flange of No. 5 guide.

Note: Any curl must be less than 0.5mm
If the tape does not run parallel to the upper flange, insert a drum spacer as shown in ⓒ of Fig. 3-50.

3) Make No. 6 guide parallel to the lower edge of the tape.

Note: There must be no curl.

4) Make No. 7 guide parallel to the upper edge of the tape.

Note: There must be no curl.

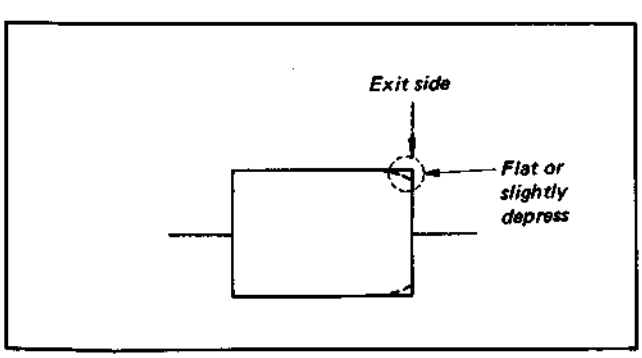

Fig. 3-48

[Standards]

Check the tape speed, and determine whether the check was made with the output level increasing or decreasing, then check at 2/3 of the maximum output level.

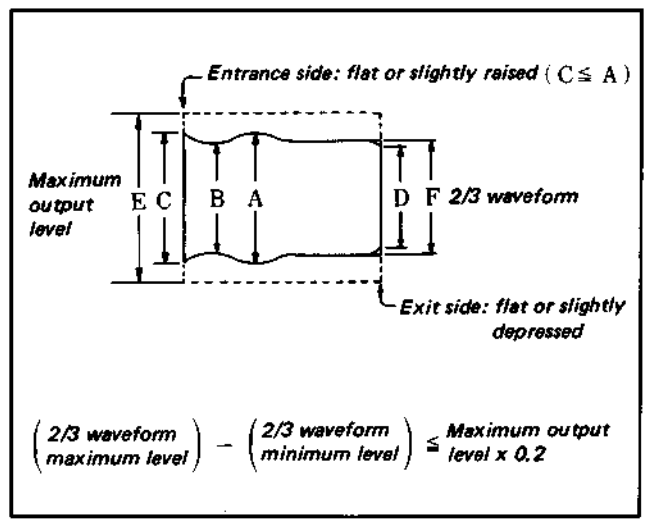

Fig. 3-49

[Outside of standards]

When standards cannot be met by adjusting only No. 1 and No. 4 guides, and No. 5 guide.
Add a drum spacer (thickness 80μ: 3-681-669-01; 40μ: 3-681-669-11) between the drum and the mechanical chassis. First use the 80μ spacer, and if this causes an inclination in the other direction, remove it and insert the 40μ spacer. A maximum of 120μ may be inserted at one position.

Diagram showing locations to insert drum spacers

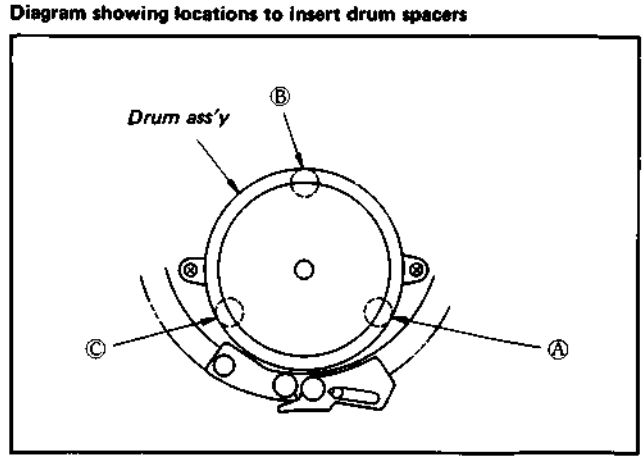

Fig. 3-50

Indications of insertion locations

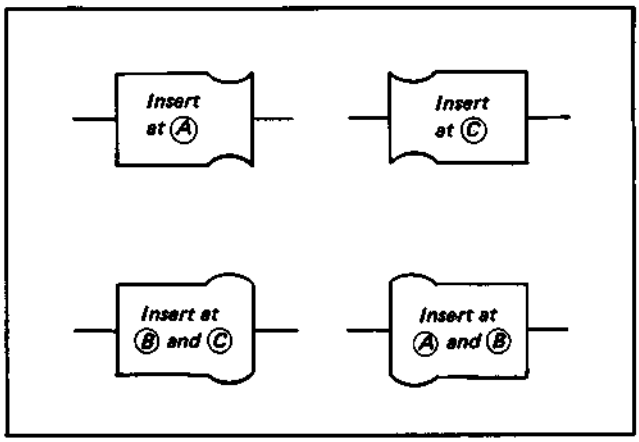

Fig. 3-51

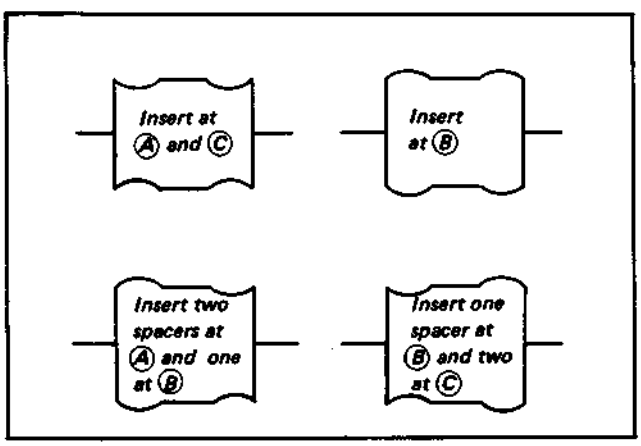

Fig. 3-52

SECTION 4
ELECTRICAL ALIGNMENT (VIDEO SECTION)

[Equipment required]

1) Oscilloscope: Dual-trace, bandwidth more than 10MHz with delay mode.
2) Frequency counter.
3) Digital voltmeter.
4) Alignment tape, type KR5-2H and KR5-3C.
5) Pattern box.
6) Audio generator.
7) Audio attenuator.
8) Audio distortion meter.
9) Audio level meter.
10) VTR (For Betamovie camera, because the VTR does not have playback or rewind functions.
11) Signal generator

[Preparatory setup for alignment]

The signal obtained from the camera is used in the alignment of the VTR, so the output signal must be within the specified range.
Verify the video signals by connecting the oscilloscope to TP11 (luminance signal) and TP9 (chroma signal) on the VC-2 board.

1. Connection diagram

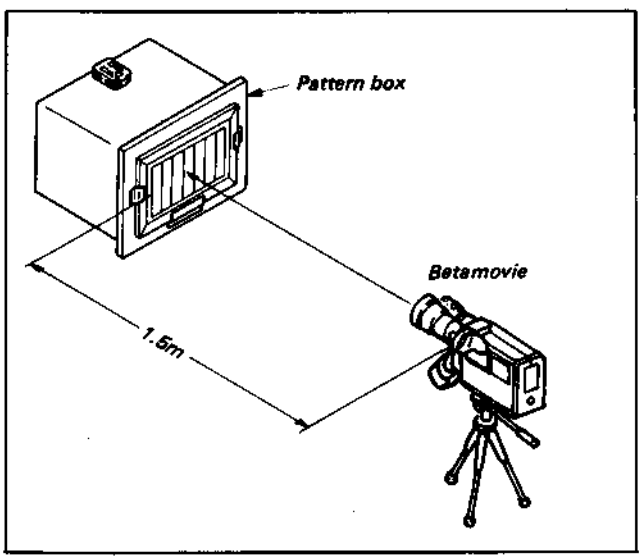

Fig. 4-1

2. Align the color bar signal on the monitor as shown in the following diagram.

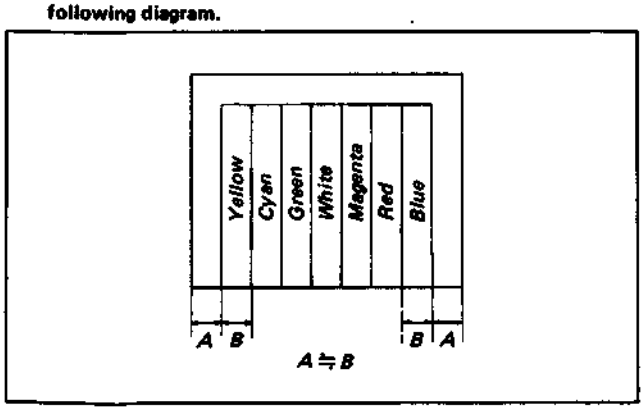

Fig. 4-2

3. Signals

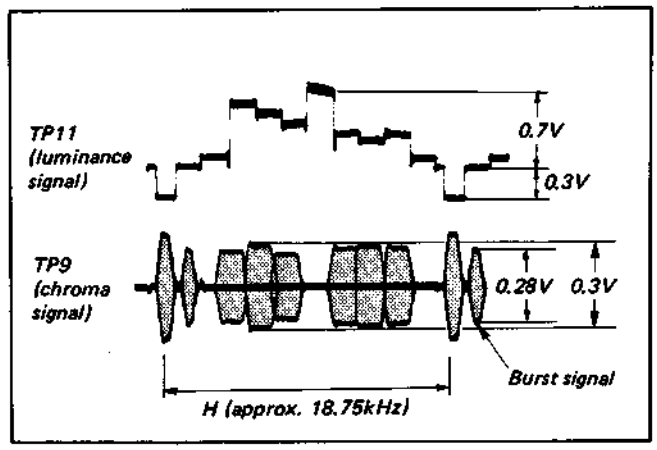

Fig. 4-3

[Method of eliminating signal from video circuit of VTR]

The luminance signal and the chroma signal supplied from the camera to the VTR via a solder bridge on the VC-2 board. To cut off signals while aligning the video circuit, remove this solder bridge.

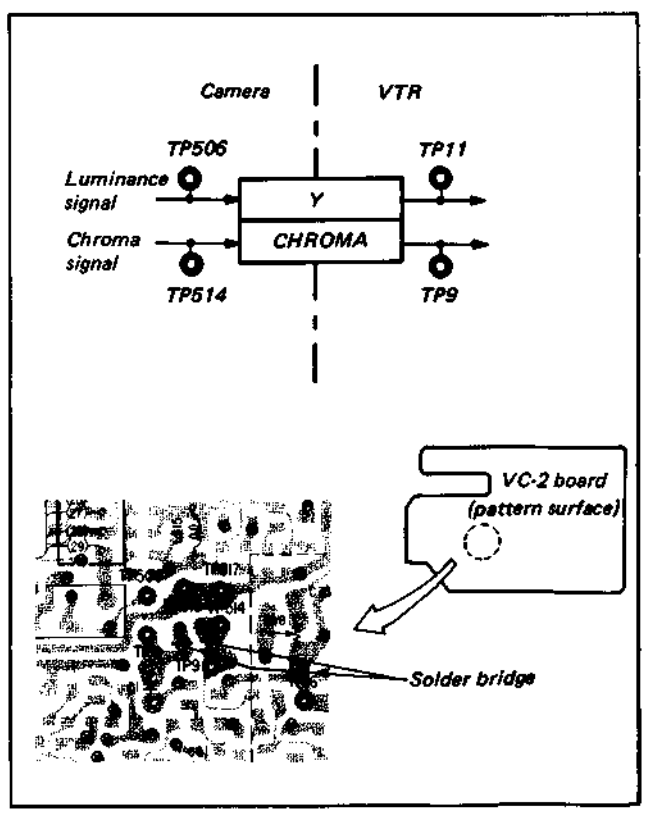

Fig. 4-4

[Alignment screwdriver]

For alignment of the semi-fixed VRs and inductances on the printed circuit boards, use the special tool supplied as illustrated in Fig. 4-5. An ordinary screwdriver is too large to adjust the VRs from the pattern side of the board. Use the metal blade of the tool to adjust VRs and trimmer capacitors.

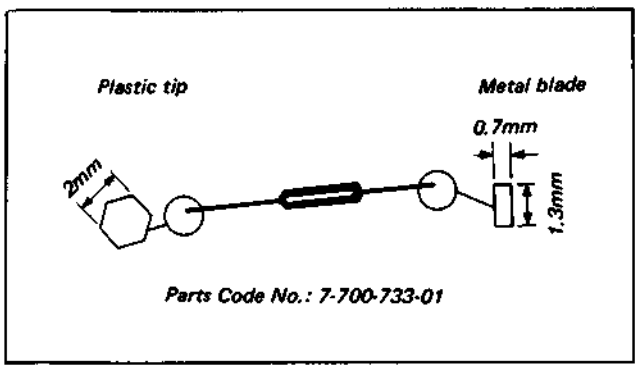

Fig. 4-5 Special alignment tool

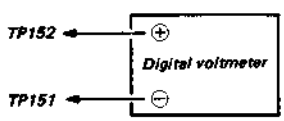
4-1. VIDEO SYSTEM ALIGNMENT

4-1-1. Compress Adjustment

Mode: Record
Signal: None (solder bridge between TP506 and TP11 removed)
Digital voltmeter:



[Adjustment method]

1) Adjust to 0.3 ± 0.01V with RV152.

4-1-2. Y-FM Deviation Adjustment

Mode: Record
Signal: Pattern box (100% white)
Oscilloscope: TP11

[Adjustment method]

1) Turn the Betamovie zoom ring until the luminance signal on TP11 is 1.2Vp-p.

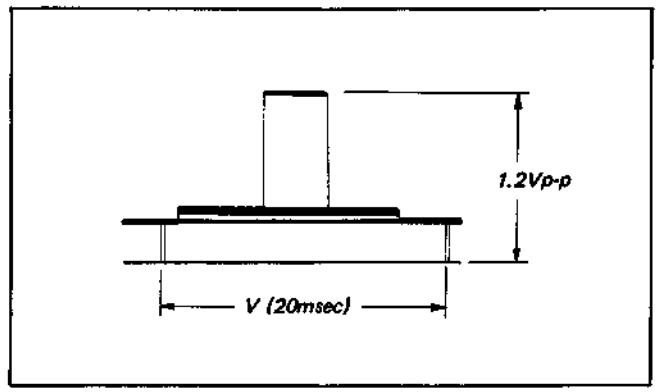


Fig. 4-6

2) Connect the oscilloscope to TP15.
3) Adjust RV156 until the signal is as shown in the following diagram.

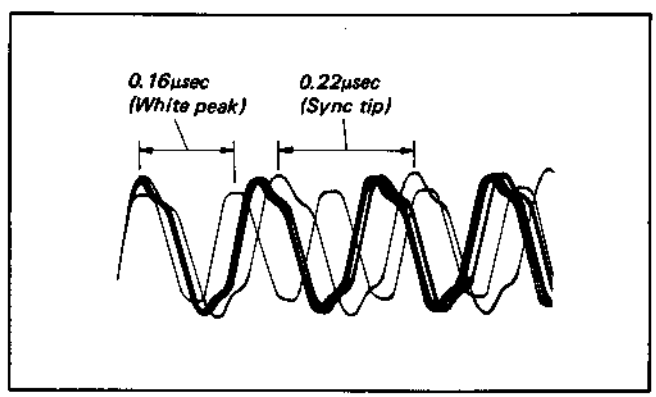

Fig. 4-7

4-1-3. Y-FM Carrier Set Adjustment

Mode: Record
Signal: None (solder bridge between TP506 and TP11 removed)
Frequency counter: TP15

[Adjustment method]

1) Adjust to 4.56 ± 0.04MHz with RV153.

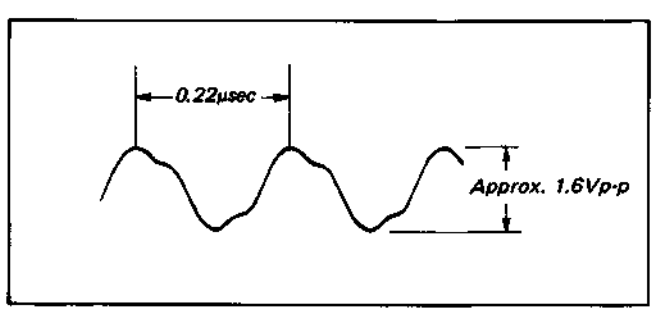

Fig. 4-8

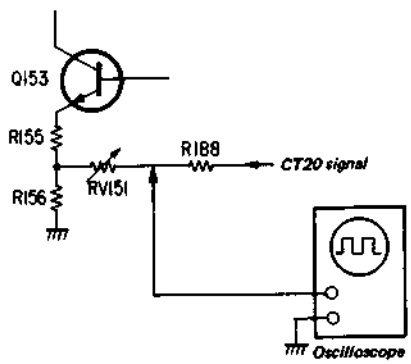
4-1-4. 1/2fH Shift Adjustment

Mode: Record
Signal: None (solder bridge between TP506 and TP11 removed)
Oscilloscope:



[Adjustment method]

1) Adjust to 2.5Vp-p with RV151.

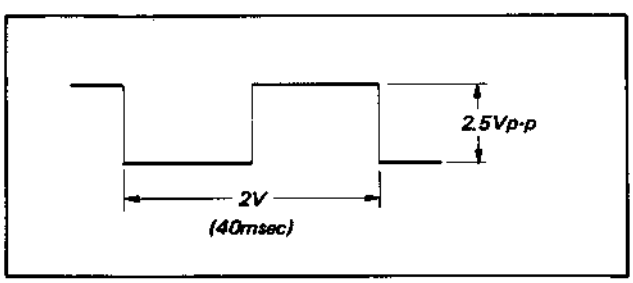


Fig. 4-9

4-1-5. Dark Clip Adjustment

Mode: Record
Signal: None (solder bridge between TP506 and TP11 removed)
Frequency counter: TP15

[Adjustment method]

1) Connect Q1 base to TP10 (GND).
2) Adjust to 2.96 ± 0.03MHz with RV154.

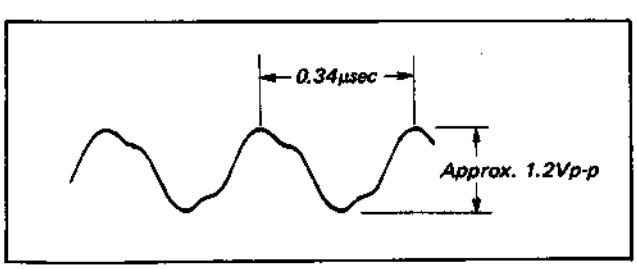

Fig. 4-10

4-1-6. White Clip Adjustment

Mode: Record
Signal: None (solder bridge between TP506 and TP11 removed)
Frequency counter: TP15

[Adjustment method]

1) Connect the base of Q1 to TP8 (+9V) with a 1.5kΩ resistor.
2) Adjust to 8.13 ± 0.03MHz with RV155.

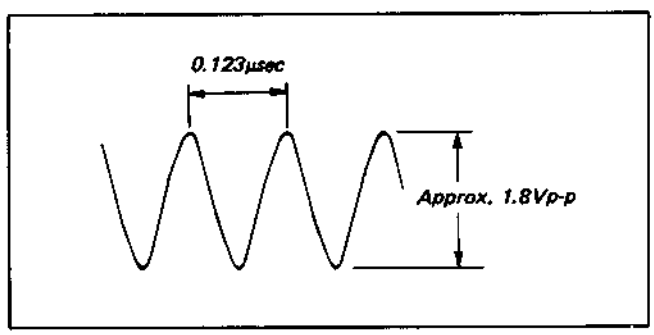

Fig. 4-11

4-1-7. Y-FM Record Current Adjustment

Mode: Record
Signal: None (solder bridge between TP506 and TP11 removed)
Oscilloscope: TP15

[Adjustment method]

1) Adjust to 1.24 ± 0.04Vp-p with RV7.

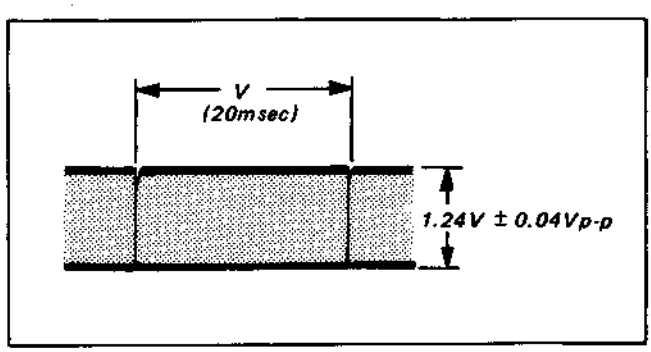

Fig. 4-12

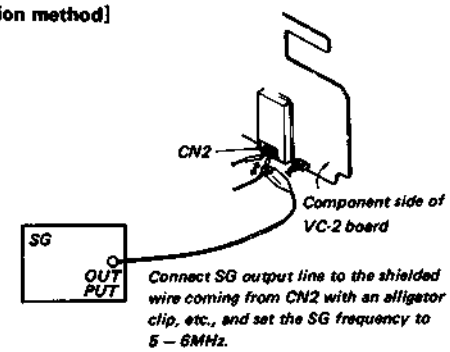
4-1-8. Clog Detection Adjustment

1. Adjustment of playback frequency characteristics

Mode: Playback (short pins ② and ④ of CN307 on SS-17 board)
Signal: Connect signal generator (SG) as shown below.
Oscilloscope: TP13

[Connection method]



[Adjustment method]

1) Adjust SG output level until TP13 output level is 100 – 200mVp-p.

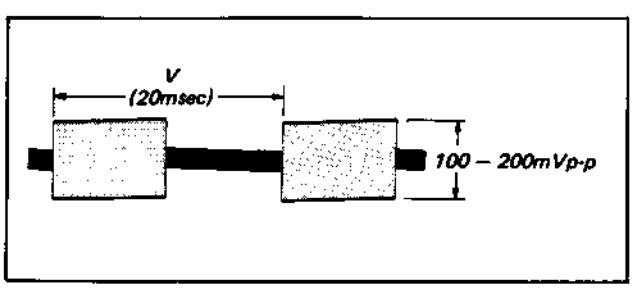


Fig. 4-13

2) With the SG frequency set to 5.06MHz, adjust L7 until the output level is a maximum.
3) Then, with the SG frequency set to 6.24MHz, adjust L8 until the output level is a maximum.

2. Adjustment of clog detection level

Mode: Record
Signal: Black level (lens covered with black paper)
Oscilloscope: TP15

[Adjustment method]

1) Adjust RV7 until the output level at TP15 is 290mVp-p, and record.

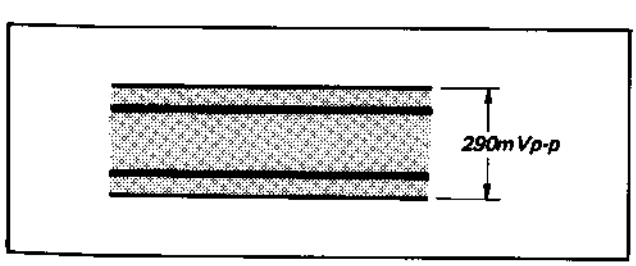

Fig. 4-14

2) Connect the oscilloscope to TP14.
3) Playback the recorded signal. (Short pins ② and ④ of CN307 on SS-17 board to get the playback mode.)
4) Turn RV8 fully clockwise (↻), as viewed from the pattern side, then, slowly turn it counter-clockwise (↺) until the state shown in Fig. 4-15 is attained.

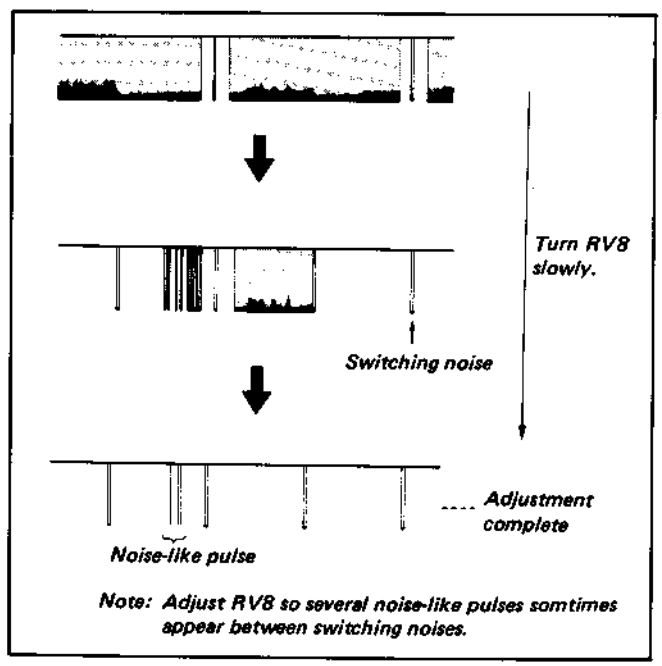

Fig. 4-15

5) With the recording current (TP15 output level) remaining at 290mVp-p, repeatedly press the REC START/STOP button 40 times, and make sure that the CAUTION lamp flickers each time.

Note: • Clog detection takes place when the STAND-BY mode is changed over to the RECORD mode.
• To turn off the flickering CAUTION lamp, either turn off the POWER switch or eject the cassette.

6) Then, adjust the recording current to 460mVp-p with RV7, repeatedly press the REC START/STOP button 40 times, and make sure that the CAUTION lamp does not flicker at all.
7) If 5) and 6) are not satisfied, finely adjust RV8.
8) After the adjustment is completed, return RV7 to the original position. (Refer to 4-1-7. Y-FM Record Current Adjustment.)

4-2. SYSTEM CONTROL SYSTEM ADJUSTMENT

4-2-1. Battery Power-off Voltage Adjustment (SS-17 board)

Mode: Record
Constant voltage power supply: External power input
Digital voltmeter: J901 (JK-2 board) ⊕ terminal

[Adjustment method]

1) Adjust the power supply voltage until the digital voltmeter reads 9.6V dc.
2) Turn RV301 fully clockwise (↻).
3) Put into recording mode.
4) Adjust the power supply voltage until the digital voltmeter reads 9.0V dc.
5) Turn RV301 slowly counterclockwise (↺), and stop where the camera is shut off automatically.

Note: When the Betamovie is automatically shut off because of low supply power voltage, only the EJECT function will operate. To continue the adjustment, cut the power momentarily and after the voltage returns to its original value, turn on again.

[Checking method]

1) Adjust the power supply voltage until the digital voltmeter reads 9.6V dc.
2) Put into recording mode.
3) Slowly lower the power supply voltage, and make sure that, as the digital voltmeter reading drops to 9.10 – 9.35V dc, the CAUTION lamp flickers at 1Hz.
4) Further lower the power supply voltage, and make sure that the automatic shut-off operates when the digital voltmeter reading drops below 9.0 ± 0.1V dc.

4-3. SERVO SYSTEM ADJUSTMENT

4-3-1. Drum Speed Adjustment

Mode: Record
Oscilloscope: TP203 (pin ⑩ of IC201)
(or digital voltmeter)

[Adjustment method]

Adjust to 3.3 ± 0.2V dc with RV202.

4-3-2. Drum Phase Adjustment

Mode: Record
Oscilloscope: CH1 TP201 (pin④of IC201)
CH2 TP202 (pin⑨of CN313)

[Adjustment method]

Adjust to 0 ± 30μsec with RV201. (See Fig. 4-16)

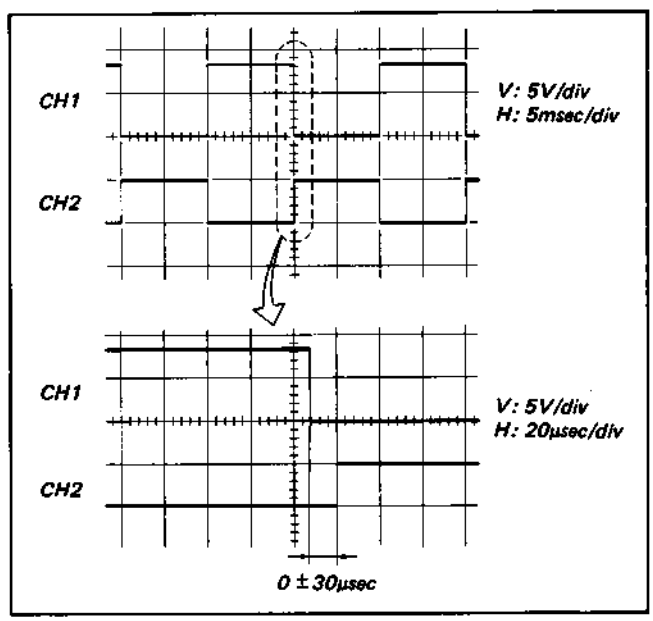

Fig. 4-16

4-3-3. Servo Lock Check

Mode: Standby
Oscilloscope: CH1 Pin⑥of IC201
CH2 Pin⑦of IC201

[Checking method]

Lock so that the waveforms of CH1 and CH2 are as shown in Fig. 4-17.

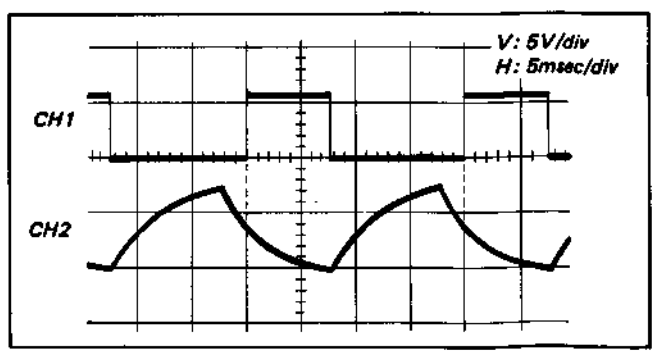

Fig. 4-17

4-3-4. Edit Adjustment

Carry out adjustments **1** through **5** given below. If adjustments **4** and **5** are not satisfied, a clear edit cannot be obtained.

1. Pinch-on delay adjustment

Mode: Standby ⟶ record
Oscilloscope: CH1 TP301
CH2 TP302
Trigger CH1
Trigger slope ⊖ (negative)
Sweep mode NORM ····· Adjust the trigger level until a waveform appears on the oscilloscope when changed over from standby to record mode.

[Adjustment method]

1) Adjust the delay time for switching from standby to record to 5 ± 0.5msec with RV302.

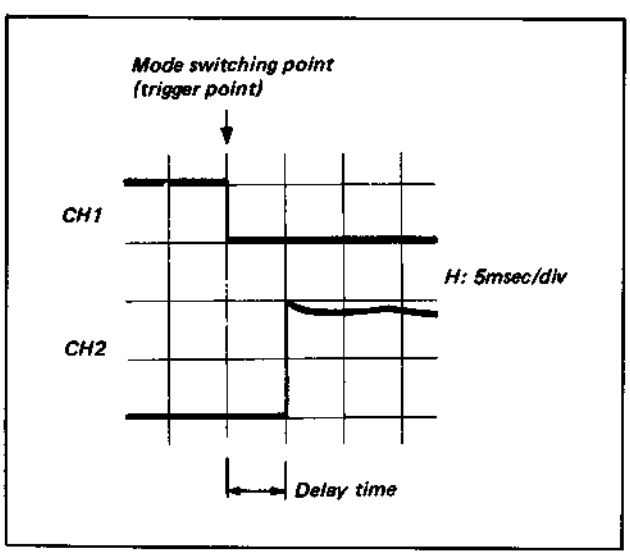

Fig. 4-18

2. Pinch-off delay adjustment

Mode: Standby⟷ record
Oscilloscope: CH1 TP303
CH2 TP304
Trigger CH1
Trigger slope ⊖ (negative)
Sweep mode NORM ····· Adjust the trigger level until a waveform appears on the oscilloscope when changing over between standby and record mode.

[Adjustment method]

1) Adjust the delay time for switching over from standby to record to 12 ± 0.5msec with RV303.

2) Make " **5. Playback CTL Phase Adjustment** ".

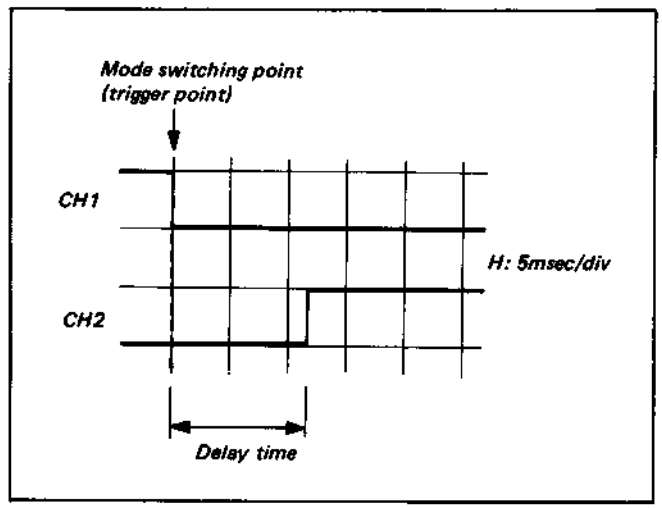

Fig. 4-19

3. Brake-on delay adjustment

Mode: Standby⟷ record
Oscilloscope: CH1 TP307
CH2 TP308
Trigger CH1
Trigger slope ⊖ (negative)
Sweep mode NORM ····· Adjust the trigger level until a waveform appears on the oscilloscope when switching over between standby and record.

[Adjustment method]

1) Adjust the delay time for switching over from standby to record to 12 ± 0.5msec with RV305.
2) Carry out " **5. Playback CTL Phase Adjustment** ".

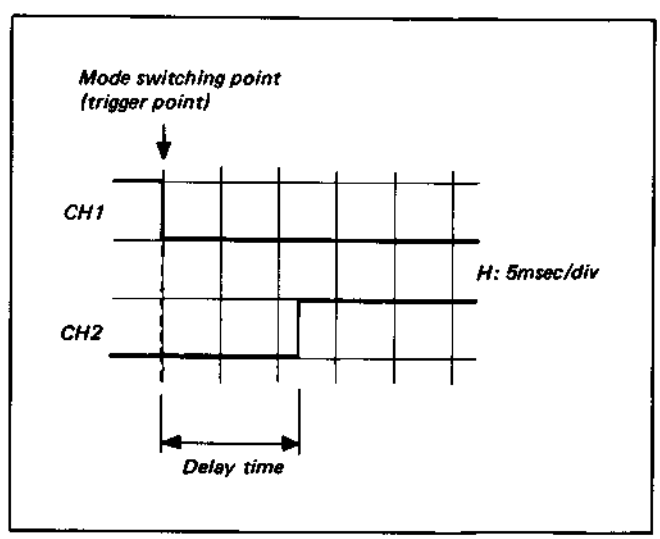

Fig. 4-20

4. Brake-off delay adjustment

Mode: Standby ⟶ record
Oscilloscope: CH1 TP305
CH2 TP306
Trigger CH1
Trigger slope ⊖ (negative)
Sweep mode NORM ····· Adjust the trigger level until a waveform appears on the oscilloscope when switching from standby to record.

[Adjustment method]

1) Adjust the delay time for switching from standby to record to 17 ± 0.5msec with RV304.

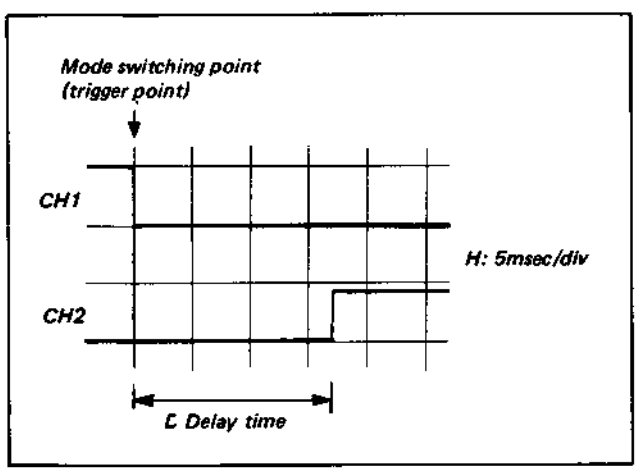

Fig. 4-21

5. Playback CTL phase adjustment

Make this adjustment accurately as inaccuracy causes noise on the edited tape.

Mode: Standby ⟶ playback
Oscilloscope: CH1 Pin ⑩ of CN509 on VC-2 board (CT10 signal)
CH2 TP204 on SS-17 board (CTL signal)
Signal: Recorded tape

[Adjustment method]

1) When the mode is switched over from STANDBY to PLAYBACK, a solenoid actuating noise is heard three times. Check that the CTL signal position at the 3rd actuation is as shown in Fig. 4-22. The CTL signal position shifts, so switch-over between STANDBY and PB several times and take the center of the range of CTL positions for checking.

Note: The CTL signal shifts right and left because there is no playback servo. For this reason, check at the 3rd actuation.

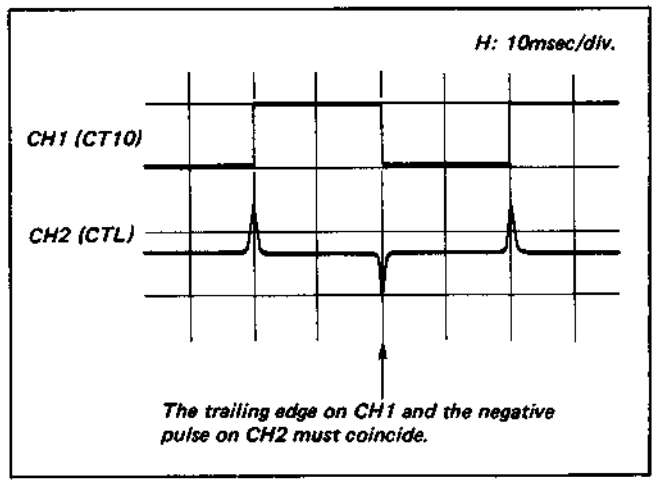

Fig. 4-22

2) If the pulses do not match as shown, carry out "**2. Pinch-off delay adjustment**" and "**3. Brake-on delay adjustment**" again. Ensure that the delay time for the two adjustments is equal.

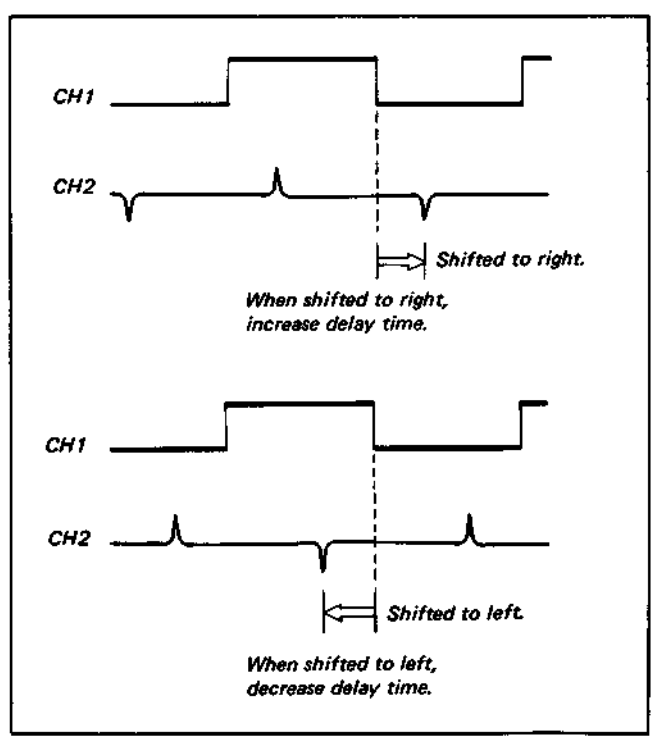

Fig. 4-23

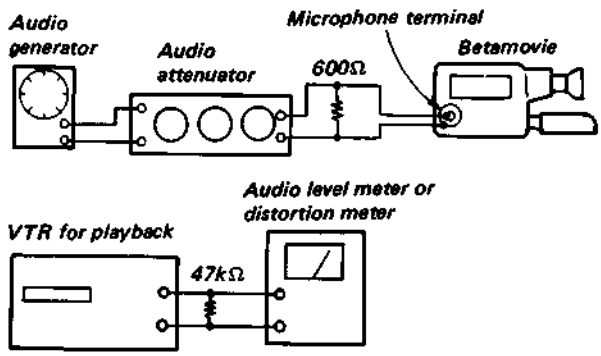
3) When the delay times are not between 10 and 20msec, check "**3-3-2. 7. Pinch roller position adjustment**".

4-4. AUDIO SYSTEM ADJUSTMENT

To adjust the audio system, a tape recorded by the Betamovie is played back on a VTR with reliable playback characteristics.

[Connecting the equipment]



Note: The playback VTR must have had its audio head azimuth and the audio playback system (playback frequency characteristics and playback level) adjusted.

4-4-1. Audio Head Adjustment

See "MECHANICAL ADJUSTMENT".

4-4-2. Bias Oscillation Frequency Adjustment

Mode: Record
Frequency counter: Pin①of CN404
Oscilloscope: Pin①of CN404

[Adjustment method]

1) With the oscilloscope only connected to pin ① of CN404, read the bias signal level.
2) Turn RV403 fully clockwise (↷).
3) Connect the frequency counter to pin①of CN404.
4) Adjust the bias oscillation frequency to 67.7 – 70.0kHz or 60 – 64.5kHz with T401.
5) Disconnect the frequency counter.
6) Adjust the bias signal level to the level read in 1) with RV403.

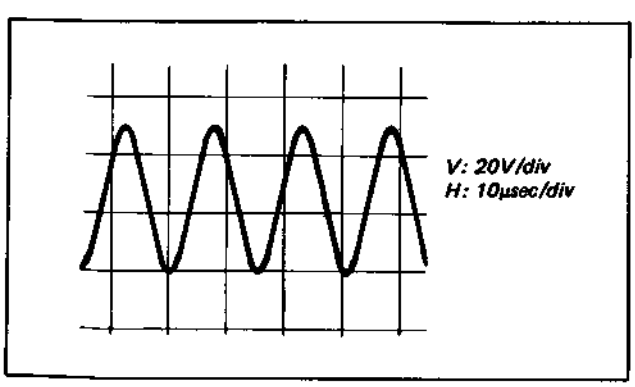


Fig. 4-24

4-4-3. Bias Leak Check (AU-3 board)

Mode: Record
Input signal: None
Oscilloscope: TP410

[Checking method]

1) Make sure that the bias leak is below 500mV.

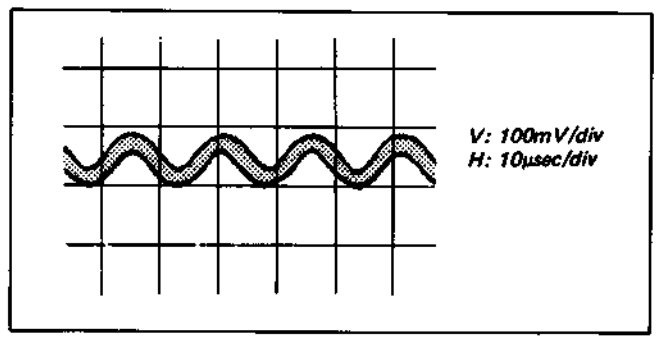

Fig. 4-25

4-4-4. Output Level Check

Mode: Record
Input signal: 333Hz, –50dB
Level meter: Earphone terminal (load impedance greater than 1kΩ)

[Checking method]

1) The output level at the earphone terminal must be –4 ± 1.5dB.

4-4-5. Record Bias Current Adjustment (AU-4 board)

Mode: Record and playback
Input signal: 333Hz, –80dB and 7kHz, –80dB
Level meter: Audio output terminal of playback VTR

[Adjustment method]

1) Record 333Hz, signals at –80dB.
2) Record 7kHz, signals at –80dB.
3) Playback the recorded tape on the playback VTR, and measure the ratio of the 7kHz output level to the 333Hz output level.

Standard: The 7kHz output level should be 0 ± 1dB relative to the 333Hz output level.

4) If the standard requirement is not met, turn RV403 as below, and repeat adjustments 1) through 3).

7kHz output level	RV403 adjustment
Low	Clockwise (↷)
High	Counterclockwise (↶)

4-4-6. Recording Level Adjustment (AU-3 board)

Mode: Record and playback
Input signal: 333Hz, −50dB
Level meter recording: TP410
Level meter playback: Playback VTR audio output terminal

[Adjustment method]

1) Put in the recording mode, and note the TP410 signal level. (approx. −8dB)
2) Playback the recorded tape on the playback VTR, and check the playback output level.

Standard: −10dB*1 or −5dB*2

3) If the standard is not met, adjust the TP410 signal level with RV401, to correct the error and repeat 1) and 2).

*1 When playback VTR audio output level is −10dB.
*2 When playback VTR audio output level is −5dB.

4-4-7. Distortion Check

Mode: Record and playback
Input signal: 333Hz, −50dB
Distortion meter: Audio out terminal of playback VTR

[Adjustment method]

1) Make a recording
2) Playback the recorded tape on the playback VTR, and check the distortion.

Standard: 4% maximum

4-4-8. S/N Ratio Check

Mode: Record and playback
Input signal: 333Hz, −50dB and no signal
Level meter: Audio out terminal of playback VTR

[Adjustment method]

1) Record 333Hz, −50dB signals.
2) Record with no signal.
3) Playback the recorded tape on the playback VTR, and measure the ratio between the signal level (333Hz) and the noise level (no signal).

Standard: Greater than 35dB.
